Yahoo Group summary: PA NBEMS Working Group

These Yahoo Groups messages were archived in WARC format by ArchiveTeam in 2018. This PDF was generated by Digital Library of Amateur Radio & Communications from the WARC files in 2026.

Date span: 2012-01-01 through 2018-06-10

Source WARC: panbems.PoGbcVC.warc.gz

Source item: https://archive.org/details/yahoo-groups-2018-06-30T20-17-34Z-59e3ca

Messages included in this PDF: 3568

Message records with no body available in the source archive: 5

Messages omitted as spam from this PDF: 1

Yahoo replaced the domain portions of email addresses with @... in the archived messages. Characters lost in Yahoo's archived text appear as ?.

Messages are presented in ascending Yahoo message-ID order. Gaps indicate records absent from the source WARC or messages omitted from this PDF as spam.

3899. Re: [paNBEMS] Sun Jan 1, 2011 net?

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-01 01:08:29 UTC
From: Harry Bloomberg
Topic: 3897 Message: 3899

I'll take the net. I spent the day removing Ubuntu Linux from my netbook
and replacing it with Linux Mint, a Linux distribution that does not force
the awful Unity desktop upon you like Ubuntu. This will be a good test of
it.

3900. Sunday 10am ET paNBEMS Directed Net, 1/1/2012, 10:00 am

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-01 08:55:23 UTC
From: paNBEMS@yahoogroups.com
Topic: 3880 Message: 3900

Reminder from: paNBEMS Yahoo! Group
http://groups.yahoo.com/group/paNBEMS/cal

Sunday 10am ET paNBEMS Directed Net
Sunday January 1, 2012
10:00 am - 11:30 am
(This event repeats every week.)
Location: 3.5835 USB / 1000 Hz center on the watefall

Notes:
Net ops on Olivia 8/500, bulletin transmission MT63 1k long (64 bit interleave), testing of FLMSG/WRAP.

Net usually transitions to 40m 7.073 USB, using same modes, at around 11am ET.

All are welcome, with our without traffic.

3901. Re: [paNBEMS] Sun Jan 1, 2011 net?

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-01 14:22:12 UTC
From: Chris
Topic: 3897 Message: 3901

Just a tip for those new to Ubuntu...

You don't have to be 'stuck' with anything....

I hate Unity and dislike the gnome-shell too, after being a GNOME user for years.

The solution if you don't like them is simple

For full bells and whistles with a million options

sudo apt-get install kubuntu-desktop

or

For a fast, lean desktop but still full of features

sudo apt-get install xubuntu-desktop

or

For bare bones, waiting for you to read up, and learn how to tweak...

sudo apt-get install fluxbox

The choices go on and on, the kubuntu-desktop installs exactly the same thing as the Kubuntu build would, the full KDE4 desktop and utils, same with Xubuntu and the xfce4 desktop.

I like things pretty stripped down most of the time so I've been on a fluxbox kick, but it requires you customize your own dotfiles for keyboard shortcuts, menu entries etc.

Xubuntu/xfce4 is quite nice for all the basic desktop conveniences. It's my favorite for older machines and laptops where you want to maximize the RAM.

Once you install another window manager/desktop, when you get to the GUI login screen, depending on which login manager you use, just choose the alternate sessions, KDE Session will show up, XFCE4 Session etc, then you'll be logged in to your alternate desktop environment.

Ubuntu, Debian, Redhat, Fedora and on and on, are only what YOU make them to be, never feel with any distro that you are "stuck" with what they give you, it's trivial to change them to be whatever you want. Ubuntu is particularly convenient with the *-desktop choices they have as they pre-package all the base utils for a complete desktop/workstation.

3902. RSID popup

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-01 15:09:39 UTC
From: kc8yjj
Topic: 3902 Message: 3902

I was playing around with some if the RSID settings. I checked the box for "Detector searches entire passband" I also checked "Notifications only".

My problem is now that I have un-checked those two options and saved the configuration, I still get the popup.

Where this is really a problem is like right now, during the net, every transmission, that pop up comes up, even if on the same frequency!

Any idea how to get rid of it?

Gary
KC8YJJ

3903. Re: [paNBEMS] RSID popup

Topic: 3902 Message: 3903

Notifications only gives you the pop-up, but it just doesn't auto-tune you
to the frequency.

Uncheck that if you don't want the pop-up.

Also if you uncheck the Detector searches option, it will only search +/-
200Hz which may be much less annoying as well. If you check that and have
it auto-tune, you'll be jumping all over.

Despite the New Years holiday, we had a great turnout for this morning's net. The stations checking in were:

K3CC
N3TN
W3DTF
W3TNU
KC8YJJ
KC2RGW
W3FDK
W4MRW
K8JRG
K3JV
W3YJ

A Happy New Year to all!

Nice job with the net, copy was light and then I got clobbered by local QRN
when you came back to me for comments, but overall I was able to copy most
of the traffic from the stations who were checked in today.

Thanks, Harry, for picking up the net and Happy New Year!

I had the rig parked on 3.5835 overnight and this morning and got good copy on all but one station.

Hi Aaron
There are several new Ellwood City repeaters you should know about.
Hopefully you are close enough to be able to hit them. Both are at the
Franklin Township building between Ellwood and Zelie

146.475 split 147.475 pl 131.8 T
443.625   +   pl 131.8 T

Both are working but the 443 is not 100% yet. So if you can not hit the
443 repeater do not worry about it. It is being worked on. These repeaters
are in place due the the hard work of Jim N3ZJM

From: kb3lsm@gmail.com
Topic: 3870 Message: 3909

Thank you for the repeater update Dennis.

Nice talking to you on 145.750 yesterday using MT63 in fldigi. I would like to try more of these modes and develop a solid local network for passing messages and files. If we ever need emergency communications from township to township or county to county, we would already have a good network in place.

I am familiar with the Franklin Twp building. I met the township engineer there a few years ago looking at a few houses in the township. I'm only a few hills over from there on the other side of Zelienople. I should be able to reach those repeaters easily and I will try them when I get home.

Nice to talk to you again Dennis and 73s

Aaron - KB3LSM

Aaron
Try getting on the Sunday evening net at 8pm.
It is for the practice of FLDIGI.
And yes, I agree with you, local practice would be great.
If you can hit the Ellwood Repeater this would be great for practice
as would simplex since we are close. Here in Lawrence County
many of us already train and use FLDIGI for every day use.

For Sunday evenings try the New Castle repeater at 147.195 + 131.8
The NCS is in Pittsburgh for this net on the 443.450 repeater (W3YJ)

Hope to hear you on the net.

Denny

3911. SATERN Nets

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-02 01:46:28 UTC
From: Dennis Neese
Topic: 3911 Message: 3911

Hi Dave KB3FXI
Could you please re-post the SATERN Nets.
When I listen here in Ellwood City I never hear the net starting.
Please post frequency and time and day.
I know they are on Monday and Wednesday evenings

Here is the info I have:
mon and wed 8pm 14.065
mon and wed 9pm 7.065
mon and wed 10pm 3.5835

Due to my work schedule I only try the 8pm and 9pm schedule.
As I have said I have never heard these nets start. Any help would be great.

Denny KB3IUU

3912. Fldigi on android tablets and ipads

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-02 03:15:09 UTC
From: kb3lsm@gmail.com
Topic: 3912 Message: 3912

Good evening everybody,

Do these programs run on android or apple tablets? Or how close are we?

I am going to buy a solid state netbook from china (less than $100 and the only thing I can afford right now) that run on 12v and they say they use very little power (which would be good for qrp). You can get them in windows or android. I'll see if I can get fldigi or any other ham data programs to run on it. Might have to install linux on it so I may need some help. I will report my results.

I've heard there are similar programs available on iOS (Apple) and Android, but nothing as functional as Fldigi.

Could you please email us a link to some info about the Chinese netbook? I will guess it's not built around an Intel architecture, so the precompiled Fldigi binaries will likely not run. If it will run Linux, you could get Fldigi to run on it by building the program from source code. Or maybe you'll get lucky and a popular Linux distribution that includes Fldigi will run on the netbook.

Building Fldigi from source code is not very difficult for an experienced Linux admin, but it can be a challenge if you're not. Before you install Fldigi you'll have to install maybe 1/2 dozen or so Linux libraries. Should the libraries not be available from a distribution's repository, you'll also have to build them from source.

Unless you're really intent to learn Linux, I think you'll be better served by taking a look at refurbished netbooks or a used laptop coming off lease that runs Windows. All the major computer vendors have outlet sites that sell these machines. I've had three refurbished Dell netbooks, they were all 2/3 the price of a new machine, came with a complete Dell warranty, and worked very well. One machine actually came with Linux installed, the other two were very easy to reconfigure as dual-boot systems.

Thanks for posing a great question to the list members here, Aaron.

pskmail seems to have had success with an Android app that is in alpha right now. Also, whatever the new version of digipan is may be working into a tablet version.

I've not heard of any attempts to make an iPad or Android version of NBEMS, but I will tell you that if someone did, I would have no problem dropping 10 or maybe even 20 dollars or more for the app.

I happen to like Windows and have had very few problems with XP or Vista and I'm really looking forward to see what is going to happen with Windows 8. The most appealing thing for me is the fact that the same OS will work on the tablets and desktops. Apps will certainly be made with the touch screen interface in mind and specifically for the use on Windows 8 tablets, but any program for Windows should work on the Windows 8 tablet. The user will just switch from the tablet based "Metro" view to the standard desktop view.

I'm almost certainly going to be holding out for a windows 8 tablet but if someone came up with an android app for NBEMS, Id be very tempted to buy a cheap andriod pad and the app.

-Dave, KB3FXI

P.S. Are there any programmers out there who could move NBEMS to Android? How would the GNU license affect the ability to charge for the app to justify the man hours and work to port all the NBEMS functionality to Andriod or iPad?

From: David Kleber
Topic: 3911 Message: 3915

The SATERN nets you listed are pretty much inactive now. They decided to focus the nets on Canada and Bermuda station participation as regional nets for the Canada Salvation Army. Same thing goes for the FLMSG daytime spot of 14.065, so we created a North America NBEMS/FLMSG spot at 14.064, 1500 Hz center, olivia 8/500. I haven't run NCS or checked in on any of the nets for a while but I have tuned in a few times and haven't heard any activity.

There is talk about a North America SATERN net and also a Eastern US Regional net and we'll be sure to keep everyone up to date when and if SATERN makes any announcements.

The SATERN Southern Territory digital net is Saturday at 1pm ET on 14.065, 1000 Hz center waterfall, olivia and I have been checking in there over the last 3 weeks or so.

It has an ARM processor. I believe there are Linuxes that will run on
ARM. But it has only a 2GB hard drive, and it's tough to fit a modern
Linux onto such a small disk. My guess is that this would difficult to
install Linux and build NBEMS. Unless you're really into hacking and would
rather spend your time tinkering rather than operating, I think your money
would be better spent elsewhere.

My advice is to buy a more conventional used or refurbished computer.

You're right Harry, I'll never get into linux or programming enough to do anything like that. I'ma buy it anyway for the slim chance that fldigi or maybe even older versions of these data programs would run on Windows CE 6.0 and try it for fun. I have a modern laptop with xp that I use now but want something else to fool with just for data and qrp.

Dave mentioned a good point that I may want to wait to buy a tablet that runs on windows 8.

If you can tolerate a poorly designed and cramped keyboard, a used Dell Mini 9 would work. I just did a search on Dell Mini 9 on eBay and there's a bunch of them out there in your price range. This was my first netbook and appeared in a photo in our first QST article about NBEMS. I know for a fact they will run a modern Linux like Ubuntu.

3921. Chinese solid state netbook, Dell Mini 9 and power consumption of tablets

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-02 04:07:13 UTC
From: kb3lsm@gmail.com
Topic: 3912 Message: 3921

Thank you Harry, I just looked at some dell mini 9s and that may be what I should look at.

I was attracted to the chinese netbooks because of the solid state drive and alleged very low power consumption. This would be nice running on a battery during an emergency, drill or field day...

What is the power consumptions of the tablets everybody is running compared to a netbook or a small laptop?

Aaron - kb3lsm
Evans City, PA

There is an MT-63/2000 app for Android. It runs fine on my HTC Incredible, but doesn't run on a lot of other Android phones, including the Incredible II. This at least tells me that someone has an MT-63 engine that runs on some Androids. There is also a PSK31 app that works very well.

I've used my HTC running the MT-63/2000 app to send short MT-63 transmissions on 2 meters by acoustic coupling.

If some Android guru can make the MT-63 app work on more Android machines, I think it would not be that hard to build a 'front end' to create wrapped NBEMS messages, and unwrap incoming ones. Then, we would not need PC's for 'on the spot' disaster work - any Android phone would do. You bet I'd be willing to pay for it, too.

3924. MT63 ANDROID was: [paNBEMS] Re: Fldigi on android tablets and ipads

Agreed on all, Bill.

I had the MT63 app on my Motorola Droid and it didn't work very well at all. But I have heard that it works well on other andriod devices.

A simple app for MT63 (500, 1000 and 2000 long) and Olivia (4/500, 8/500, 16/500) and the ability to do FLMSG would be fantastic for situations
in the early stages of an unexpected emergency where we are very likely to have our phones, but may not have our laptops/netbooks. It would be great to have an FLMSG working app on my phone.

Hello,

I'm supposed to be traveling westbound on the PA Turnpike (I-76) today from Harrisburg to Pittsburgh. Im seeing some winter storm earnings out of Somerset county and the surrounding areas.

If anyone lives in that area and would like to give me a report on the weather (snow accumulation), that would be great.

Drive safe Geoff, we just came out of a week of mild weather with heavy snow (mild is 0c), then we got the arctic cold front come through the last 2 days with -21c (and -28c with windchill) and drifting and blowing snow, a few vehicles mis-judged a few of the snow blown corners and test drove their vehicles on the drivers side door while bush surfing, no one was hurt though.

You probably know this already but in case you don't....

The Turnpike has a great website:

http://www.paturnpike.com/

The only advisory they're currently listing is an increase in tolls.

It's been my experience that the snow removal on the PA Turnpike is better
than on the roads mantained by PennDOT.

I was following the instructions given in
http://panbems.org/multiple_fldigi_configurations.pdf to set up multiple configurations of fldigi on a single computer. On the last page it says

We'll also need to edit our FT-817 Flmsg launcher:
"C:\Program Files (x86)\Fldigi-3.21.32\fldigi.exe" --flmsg-dir-dir
"c:\Users\Harry\NBEMS-817.files".

Is this an error? Shouldn't it be referencing the flmsg.exe?

3935. Net reminder

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-07 00:05:40 UTC
From: KB3FXI
Topic: 3935 Message: 3935

Hello all,

Just a reminder that the Sunday morning net is back on track this weekend at 3.5835 USB at 10am ET and then we usually switch up to 7.073 USB by around 11am ET after the close of the 80m net.

Also keep in mind that during the week days, there are a bunch of us on 14.064 USB, 1500 Hz center waterfall, 8/500 Olivia, where we send out FLMSG messages with general info and wx condition reports.

If you park your rigs and FLDIGI/FLMSG on this spot during the day, you'll most certainly have some messages waiting for you when you get back to the shack.

If you send out any FLMSG messages or cq's on 14.064, please make sure you transmit RSID (enable TxID).

Hope to see you all on the waterfall or get an FLMSG message from you.

Happy New Year.

I am looking at building a 'smaller' take-away digital station.
I have been looking at a ASUS Eee PC 1001P Netbook 1GB running Microsoft Windows 7 Starter software.
(Yes a little older and used but relatively cheap). I like the long battery life as compared to normal laptop.

I would probably be using a Donner Digital Interface.

Anyone have experience using Netbook / 7 Starter and FLDIGI/FLMSG?

Jack,

I use a Lenovo netbook with Windows 7 starter. I upped the memory, so mine runs 2GB. I have had no problems with it. I used it in the last TMI drill, the hospital drill, the training sessions, and the occasional NBEMS net check-in and it has worked FB with the Signalink.

3939. Trouble with fldigi

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-08 01:36:55 UTC
From: lshields20
Topic: 3939 Message: 3939

Last year I tried to set up fldigi etc. for use with nbems. I could get fldigi to work at times, but most of the time it would crash every few minutes. Now I'm trying again. Different computer with lots of RAM, storage and processor. I have installed flrig 1.2.5, flwrap 1.3.1, flmsg 1.1.2 and fldigi 3.21.4.

I get the same results. Lots of crashes. The modems seem to work just fine, but the rig control seems to be the problem. I have used hamlib and catlib and today I tried flrig and xml-rpc. The latter was at the suggestion of Dave on the win-fldigi group who said " You need to set fldigi up to use the xmlrpc rig control interface and no other." Unfortunately flrig does bad things to the transceiver and then quits working.

I am using a IC-765PROIII with a Navigator interface. Everything works just as it should with Ham Radio Deluxe. I have used other programs with this hardware and it all works just fine. Can anyone give me an idea why I can't get this to work.

FWIW, I'm not a complete dope when it comes to computers. I have 25 years experience as a control systems and software engineer.

Try taking a look in Help->Event Log. Perhaps you will find something
helpful there.

Fldigi 3.21.4 is pretty much out of date at this point. You will be best
served by grabbing the latest version from W1HKJ's website.

First of all ... oops! When I was a software developer, our version control system used .4 to mean .40 and .04 to mean version zero four. So I thought I was using the latest, hi hi. Having said that, it didn't make any difference.

I've spent so much time looking at the logfiles today that I am cross-eyed. Running flrig standalone, it sends a bunch of commands to the transceiver that turn the volume to zero; turn output power to zero; sets the receive bandwidth to zero (actually goes to 150 Hz); etc., etc. I can't imagine why it does that. It also turns the preamp and attenuator ON. If the attenuator is already on, it bumps it up a notch. If I nudge the physical volume control a little it overrides the CI-V command and returns the audio level but not much else. If I change frequency on the radio, sometimes it shows up in the flrig display and sometimes not.

Does everyone use flrig, or have others had luck with hamlib and rigcat?

Les

I've not used Flrig. For the amount of rig control that I like, I've been using Rigcat in Fldigi on IC-7000, IC-7200, and FT-817. However, getting it to work can be painfully difficult at times and requires a lot of trial-and-error. I'm hoping to put together some helpsheets on the rigs that I've been able to make work.

My advice is to start simple with Rigcat, get that to work, and then move on to Flrig.

Jack

I use an ACER 10 inch Netbook w/ windows 7 starter es 3 different SignaLink USB(s) for my different Rigs es have no problem w/ that setup... (Shelled out $289.00 [w/tax] for the ACER new)

I also use it for acoustical coupling on impromptu emergency setups es/or training Demo sessions es it works great!!!

I also have picked up an ASUS Eee PC (same basic as ACER) for $35 at a swap es plan to use it for extra an field unit / backup. Haven't got it configured yet,
but don't envision a problem... Sure beats lugging my both of my 17 inch HP Laptops around.

Only special attention I had to endure, was making sure that I set the sound card interface setup as it is described in the literature for the SignaLink USB, for
Windows 7. Works great otherwise.

As you can see in the price difference, looking around for used gear, still makes huge saving for equipping a jump bag... Good choice Jack...

Hello all;

Question concerning the MFSK64 mode.

After loading picture to transmit there are several options:
Xmtclr---which I understand to mean Transmit color picture
XmtGry---which I understand to mean Transmit gray scale picture.

Here is the question. If I have loaded a color picture to transmit and
I select the XmtGry option will this convert the picture to Grayscale
or must the picture be loaded as a gray scale first?

I do understand the picture must be/ should be 72 dpi to keep a reduced size
and that gray scale will transmit faster.

3959. Winter Field Day - NBEMS

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-13 20:27:29 UTC
From: KB3FXI
Topic: 3959 Message: 3959

Hello all,

I would like to encourage a major level of NBEMS participation in the 2012 SPAR Winter Field Day from 1700 UTC (12:00 noon EST) Saturday January 28, 2012 through 1700 UTC (12:00 noon EST) Sunday January 29, 2012.

I'd like to suggest that we spread the word far and wide and encourage the use of NBEMS / FLDIGI keyboard to keyboard for the individual exchanges, which consists of call sign, RST, station class and your local outside temperature. But I would also then ask the other station if they can receive FLMSG. If they respond in the affirmative, we could send an FLMSG message containing the log of all the other reports your station received to that point. The report would be done in FLMSG and wouldn't count unless both stations confirmed 100% with FLMSG/wrap.

Here's how the basic exchange might look...

###############

w3yj de kb3fxi
pse copy my
kb3fxi, 599, 1h

I copy ur
w3yj, 579, 1h

pse advise if you can receive NBEMS/FLMSG message of my current contact log

###############

And here is how the FLMSG message would look...

###############

and here's my current log:
freq, mode, date, time, my call, rst exch, rx call, rx
rst, exch
3.583 Oliv, 2012-28-01, 1711, KB3FXI, 599, 1H 35F, WB5XAC, 599, MO 13C

7.073 Oliv, 2012-28-01, 1815, KB3FXI, 549, 1H 35F, aa5ca, 559, 10 60F

w3yj de kb3fxi
pse advise if 100% confirmed

########################

As we get further through the event, the log would get longer and the exchange more challenging.

Unlike most other on the air events and contests, SPAR Winter Field Day allows for any digi modes (Digital - including PSK, RTTY, and soundcard modes). I was thinking of putting a message out on the lists and nets promoting NBEMS participation in SPAR Winter Field Day and encouraging the use of the "Generic" FLMSG form with a standard Winter Field Day template for the contact exchange. I would encourage message exchanges on the following NBEMS frequencies:

28.128 USB
14.064 USB
7.073 USB
3.5835 USB

Recommended modes:
Olivia
Thor
MT63
PSK (R)
BPSK

Modes not recommended (due to no extended characters):
DominoEX
Contestia

The official rules can be found at the SPAR web site:
http://www.spar-hams.org/contests/winterfd/index.php?pg=2

Any thoughts before I put out a message that we can forward to other email lists and over the NBEMS nets?

I think that's good news. I have had great success with point to point or peer to peer with Winmor with the successful transfer of about 30k worth of data. I'd like to see use try to do some massive message bundle backhaul with Winmor, between NBEMS net liaisons and MARS ops, too.

I wonder if MARS still plans on dumping MT63 and Olivia?

I just typed that log manually.

I don't use any special logging software.

Subject: [paNBEMS] Winter Field Day - NBEMS

Hello all,

I would like to encourage a major level of NBEMS participation in the 2012 SPAR Winter Field Day from 1700 UTC (12:00 noon EST) Saturday January 28, 2012 through 1700 UTC (12:00 noon EST) Sunday January 29, 2012.

I'd like to suggest that we spread the word far and wide and encourage the use of NBEMS / FLDIGI keyboard to keyboard for the individual exchanges, which consists of call sign, RST, station class and your local outside temperature. But I would also then ask the other station if they can receive FLMSG. If they respond in the affirmative, we could send an FLMSG message containing the log of all the other reports your station received to that point. The report would be done in FLMSG and wouldn't count unless both stations confirmed 100% with FLMSG/wrap.

Here's how the basic exchange might look...

##############

w3yj de kb3fxi
pse copy my
kb3fxi, 599, 1h

I copy ur
w3yj, 579, 1h

pse advise if you can receive NBEMS/FLMSG message of my current contact log

##############

And here is how the FLMSG message would look...

##############

and here's my current log:
freq, mode, date, time, my call, rst exch, rx call, rx
rst, exch
3.583 Oliv, 2012-28-01, 1711, KB3FXI, 599, 1H 35F, WB5XAC, 599, MO 13C
7.073 Oliv, 2012-28-01, 1720, KB3FXI, 559, 1H 35F, k3zzy, 579, 1h 35F
7.073 Oliv, 2012-28-01, 1733, KB3FXI, 579, 1H 35F, k7cxx, 569, 1h 13C
7.073 Oliv, 2012-28-01, 1745, KB3FXI, 599, 1H 35F, wb9asp, 599, 1i 23F
7.073 Oliv, 2012-28-01, 1755, KB3FXI, 599, 1H 35F, kb3zya, 599, MO 11C
7.073 Oliv, 2012-28-01, 1815, KB3FXI, 549, 1H 35F, aa5ca, 559, 10 60F

w3yj de kb3fxi
pse advise if 100% confirmed

##########################

As we get further through the event, the log would get longer and the
exchange
more challenging.

Unlike most other on the air events and contests, SPAR Winter Field Day
allows for any digi modes (Digital - including PSK, RTTY, and soundcard
modes). I was thinking of putting a message out on the lists and nets
promoting NBEMS participation in SPAR Winter Field Day and encouraging the
use of the "Generic" FLMSG form with a standard Winter Field Day template
for the contact exchange. I would encourage message exchanges on the
following NBEMS frequencies:

28.128 USB
14.064 USB
7.073 USB
3.5835 USB

Recommended modes:
Olivia
Thor
MT63
PSK (R)

BPSK

Modes not recommended (due to no extended characters):
DominoEX
Contestia

The official rules can be found at the SPAR web site:
http://www.spar-hams.org/contests/winterfd/index.php?pg=2

Any thoughts before I put out a message that we can forward to other email lists and over the NBEMS nets?

3967. net report from this morning

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-15 17:31:44 UTC
From: KB3FXI
Topic: 3967 Message: 3967

Hello all,

We had a nice net this morning. Somewhat of a light turn out and the only station from EPA was k3mxs. Where's all our EPA folks? They're missing out on the fun.

Anyway, Russ up in Venango was operating at the Venango County EOC. The station there is doing a fine job on 80m and 40m. I sent an ICS213 to Russ to pass along to the EMA director there. He received and confirmed 100% and printed it up. We'll see if Russ gets a response to send back down to the net.

We passed messages on the Winter Field Day and the Spring EmComm Confernece at Pitt/Johnstown. We also discussed some of the peer to peer Winmor testing we have done for possible use in relay/liaison "power stations" so that a limited number of expert operators can move bulk emergency messages, health and welfare or very large spreadsheet/database CSV files for logistical data.

I hope to see you all next week. Please spread the word on our nets. We'd like to see some new folks aboard, especially local/county net liaisons so we can start moving more information.

Lets see if we can drum up some folks from EPA to check in.

73 fer now and hope to see you all next week.

-Dave, KB3FXI
paNBEMS.org

Today we had:

k2mxs, berks
n3gyw, crawford
aa3ye, clarion
ka3wnl, venango, at CO EOC
k3hps, butler
w3tnu, westmoreland, designated relay
n3tn, beaver
kb8htu, west point OH
w3fdk, adamstown MD
nx2i, monroe CO NY
n2nvz, NY
k3iso, westmoreland
n2tif, NY

Thanks to all for checking in.

Sent: Monday, January 16, 2012 10:59 AM
Subject: Re: digital MSG Drill (Note time changes.)

New Mexico ARES/EMCOM will be conducting a “Message Drill” on January 28, 2012 starting at 1300 UTC through January 29, 2012 ending at 1900 UTC.
>
>One of the HF digital frequencies that will be used is 10,135 Khz (USB) using the W1HKJ FLDIGI software suite with RxID, TxID enabled. I would like to invite all non-New Mexico Hams to participate in this Message Drill by sending a properly NTS formatted message or ICS-213 formatted message to the NM Stations monitoring 10,135 Khz. Since New Mexico is celebrating the 100th anniversary of Statehood in 2012, you can wish the State a “Happy 100th birthday” in a properly formatted drill message.
>
>The messages should have "Drill Message" on the top and bottom of the message. Address the "Drill Messages" to our new New Mexico Section Manager, W5YEJ, Bill Kauffman and our New Mexico Section Emergency Coordinator, K5SCA, Mike Scales.
>
>The purpose of this HF Message Drill is to have fun and provide the NM ARES/EMCOM Group with some practice handling point to point message traffic on HF.
>
>The NM Stations will use 7,103.5 KHz USB during the daylight hours on January 28 & 29 until 1900 UTC (29JAN2012) for NM Point to Point digital communications, however, several of the NM Stations will maintain a radio watch on 10,135 KHz USB for any inbound NM message traffic. This is called a "Radio Watch".
>
>NM will have several Stations standing by on 7,103.5 KHz, to receive any message traffic during the daylight hours (MST) with at least one Station monitoring 10,135 KHz (USB). I would recommend that we use MT-63-1K on 7,103.5 KHz with a long pause at the beginning & ending of each transmission. For the NM Stations who do not have FLDIGI loaded on to their PCs, use what software you do have (MixW, etc.) loaded on your PC that will handle MT-63-1K on 40 meters.
>
>For the NM Stations, this will require coordination on a Voice

Frequency within the State. I will monitor the Mega-Link during
the daylight hours. Remember, do not use digital modes on the
Mega-Link.

3972. AIM4170 Resources Page makeover

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-19 21:09:08 UTC
From: Ian Wade G3NRW
Topic: 3972 Message: 3972

I have just spruced up the AIM4170 Resources Page:

http://homepage.ntlworld.com/wadei/aim4170.htm

The new page includes a link to my article "AIM4170 Revisited" which the
RSGB recently published in RadCom.

The article focuses on three aspects of AIM4170 operation:
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
* Using custom scanning to measure the impedance at the antenna
feedpoint.
* The Time Domain Reflectometry (TDR) feature.
* Remote operation using a wifi network connection.
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

FB, Gary. I'm really surprised that you didn't get 100% on my mt63 2k long. You were strong here and if I was even peaking your meter and you could hear me, you should have pulled out 100%. We've got mt63 2k long with perfect copy over 2m simplex channels were you couldn't even tell who the op was on the other end.

I wonder if you may have your audio input or mic level too high. If the signature on the waterfall is all yellow, that's a good indication that your rx or mic level is too high. MT63 doesn't play well with hot audio and does much better with lower levels.

Anyway, I'm looking forward to some more work on 2m simplex. I think we'll have a lot of fun in the process and hopefully we'll bring in enough operators to be able to pull off some multi hop relays to cover much of E OH, WPA and WV.

I don't think it was an audio issue. But I do wonder if it had anything to do with the antenna I was using. It is a 9 element RHCP Sat yagi. Your signal was going from 0 to an S3 max and it seemed like there was a lot of noise there. Next try I will use a vertical, which is about 30 feet higher.

As far as SSB, I suspect there are more stations with capable radios, just not as many with horizontal antennas. With all the "Swiss Army Knife" radios that are out there now I think it is pretty common. I have 3 that will do 2 M SSB.

Gary,

My experience with MT63 on FM is that usually if you can hear anything at all on the other end, the mode will decode perfectly. I remember my first experience with MT63 2k long under very poor simplex conditions during the Rachel Carson Trail Challenge and I was arguing the the fellow on the other end (who I could barely hear) that it wasn't going to work. He kept calmly saying "let's try it anyway" and sure enough, it did. There was more noise than signal on that path and we passed a CSV spread sheet of over 500 race participant number and time stamps.

On 2m SSB, many more serious hams have the gear, but many more don't. I only have 2m ssb on my FT-817 qrp rig.

I'd love to see someone come out with a 10, 6, 2, 70cm all mode rig. It could be marketed as the ultimate technician class transceiver.

Like anything using FM, once the signal drops, more noise is added into the demodulation block because that's just the way FM works. FM adds noise into the baseband signal once the signal strength drops, hence, why you hear a boatload of noise when you open up the squelch on an FM handheld, because the FM demodulator is trying to demodulate the background noise. FM, in my opinion, is a really retarded modulation scheme, especially if you are trying to modulate a digital baseband signal into it. If it weren't for the capture effect, I doubt FM would ever have become a useful mode.

With two meters, there isn't any background noise (okay yeah there's a little bit), so the signal can be quiet as can be and the noise won't interfere with the transmission. If you could hear something starting to come through using FM, there's no doubt that SSB would allow for a 100% copy.

I've been considering getting the 10Watt 2M module for my K3, just so I can do SSB and CW. I'll most likely need to grab something to bring 2M up to 100W, but 2M is one of those bands where the extra power doesn't help you too too much.

I'm pretty sure that plans for a 2/440 yagi to be installed on our tower in Oakland here at Pitt are in the works in the near future. If we could somehow snatch our IC-910H from an undisclosed location and bring it up into our shack in Benedum Hall, that would be very nice.

Anyway, gotta run to class.

I don't think it was an audio issue.
But I do wonder if it had anything to do with the antenna I was using. It is a 9 element RHCP Sat yagi. Your signal was going from 0 to an S3 max and it seemed like there was a lot of noise there. Next try I will use a vertical, which is about 30 feet higher.

As far as SSB, I suspect there are
more stations with capable radios, just not as many with horizontal antennas. With all the "Swiss Army Knife" radios that are out there now I think it is pretty common. I have 3 that will do 2 M SSB.

Funny that this should come up just now. I was on the Wheeling repeater talking to K8YIO and found out there is a 2 meter SSB "DX" net every morning on 144.205 + or _

I worked a couple, one out in SW Ohio and one up in NY, so there is some activity out there.

Geoffery,

There's no doubt that SSB will outperform FM but the big issue is the lack of stations with the gear capable of doing 2m SSB.

I would like to see 2m FM nets and high levels of participation everywhere. Local communications are where it's at in an actual emergency and just about every ham has 2m FM gear.

Subject: Re: [paNBEMS] 2 METER ACTIVITY

Like anything using FM, once the signal drops, more noise is added into the demodulation block because that's just the way FM works. FM adds noise into the baseband signal once the signal strength drops, hence, why you hear a boatload of noise when you open up the squelch on an FM handheld, because the FM demodulator is trying to demodulate the background noise. FM, in my opinion, is a really retarded modulation scheme, especially if you are trying to modulate a digital baseband signal into it. If it weren't for the capture effect, I doubt FM would ever have become a useful mode.

With two meters, there isn't any background noise (okay yeah there's a little bit), so the signal can be quiet as can be and the noise won't interfere with the transmission. If you could hear something starting to come through using FM, there's no doubt that SSB would allow for a 100% copy.

I've been considering getting the 10Watt 2M module for my K3, just so I can do SSB and CW. I'll most likely need to grab something to bring 2M up to 100W, but 2M is one of those bands where the extra power doesn't help you too too much.

I'm pretty sure that plans for a 2/440 yagi to be installed on our tower in Oakland here at Pitt are in the works in the near future. If we could somehow snatch our IC-910H from an undisclosed location and bring it up into our shack in Benedum Hall, that would be very nice.

Anyway, gotta run to class.

Gary,

My experience with MT63 on FM is that usually if you can hear anything at all on the other end, the mode will decode perfectly. I remember my first experience with MT63 2k long under very poor simplex conditions during the Rachel Carson Trail Challenge and I was arguing the the fellow on the other end (who I could barely hear) that it wasn't going to work. He kept calmly saying "let's try it anyway" and sure enough, it did. There was more noise than signal on that path and we passed a CSV spread sheet of over 500 race participant number and time stamps.

On 2m SSB, many more serious hams have the gear, but many more don't. I only have 2m ssb on my FT-817 qrp rig.

I'd love to see someone come out with a 10, 6, 2, 70cm all mode rig. It could be marketed as the ultimate technician class transceiver.

Dick,

Last night I think we were on 145.510. We're going to start a 2m simplex schedule for the first Wednesday of every month on 145.530 FM simplex at or about 9:30 PM. Feb 1st will be our first schedule.

We could give simplex a try between us but I doubt we'll pull it off with 2 big mountains between us. What would be great is if we could find enough stations throughout PA, OH, WV, MD and NY to be able to pull off multiple hop relays.

I agree Dave, FM will be/is undoubtedly be the most common and easiest to deploy. A few hilltop big gun stations and with relays, you could cover quite a large area if needed.

I also saw a demo of team view last night. KB8HTU was operating the station in their EOC from home. Needs the internet, but still has possibilities.

Ok, Dick.

I'll be putting out a formal announcement on the list here soon on our VHF FM simplex schedule. I hope that everyone will spread the word. It would be really great to get more big gun stations like your on board and I think they'd have a lot of fun.

BTW, I have a 5 element yagi up about 30' at my home qth and we have a 4 element yagi at the Skyview Radio Society which is up about 30'' but at a much higher elevation. I will most likely be working from Skyview/WX3SKY for the VHF schedules.

3990. VHF Simplex Schedule

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-20 18:27:44 UTC
From: KB3FXI
Topic: 3990 Message: 3990

Hello all,

We're going to start a VHF Simplex schedule on Wednesday February 1st, 2011 at 9:30 PM ET on 145.530 MHz FM.

The goals of this operating schedule are to encourage digital NBEMS operations on 2m FM simplex, increase our base of trained NBEMS digital operators, practice digital messaging and relaying, make new friends and have fun.

If we can get enough participation, we would ultimately want to shoot for the ability to cover wide regions with the ability to move messages with multiple relays. Our short term goal is to try to cover Eastern Ohio, the Northern section of West Virginia, Northern Maryland, the Western half of Pennsylvania and South Western New York.

The schedule will repeat on the first Wednesday of every month on 145.530 FM simplex at 9:30pm ET.

Please spread the word on digital and phone nets (local and regional), on email lists and at club events.

Dave,

Columbiana county, OH has been meeting on 145.510 for about a year at 8:30PM on Wednsdays.
If anyone wants an early start to FM simplex, come join us then we can switch to 145.530.

RXID and TXID are always on to catch the mode and frequency.
We usually stay on 1000 Hz on the waterfall.

A good way to test signals into Columbiana county.
Several of us can operate the 2M rig at the county EMA remotely
to test getting traffic in and out of the EMA.

I will put your schedule on our Yahoo groups and the ovhams Yahoo group.

4002. flrig and IC-706mkIIg

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-21 21:12:43 UTC
From: nn8b
Topic: 4002 Message: 4002

Is anyone using flrig with an IC706MkIIG?
I am having trouble with flrig setting the mode on the rig.
It seems if I change bands it always defaults to SSB,
then when I go back to VHF it will not go to FM.

73

How about the RigCat or Hamlib options?

I used to have my best luck with RigCat but recently got FLRIG working with my IC7200. I could have really cared less about rig control and worked without it over the last 2 years or so but I wanted the ability to operate my station by Internet remote with LogMeIn, which was the only reason I bothered getting the rig control working.

Bob, I have been at it again since you sent your email. I finally got flrig to work, but I have no control over mode at all. Even if I manually change it on the radio, nothing happens in fldigi or flrig. The rig changes, but not the software.

It should be interesting to see how this little groundwave contest does if the bands hold up. I'm seeing lots of greyline stations from South America and it's not all that uncommon these days for the dx to hold up into the evening hours.

Jump on or about 28.120 and see if you can give any of the Pittsburgh Area stations with the Breezeshooters contest some points!

The equipment used is the Icom level converter for rig control.
A signalink USB for the digital output.

I tried the Rigcat and Hamlib and it was even worse than FLRIG.
There was not even a frequency readout from the embedded fldigi
rig controls.

There is interest in Columbiana County for fldigi on FM due to
upcoming FEMA mandated nuclear power plant drills.
We have been using local FM simplex for about a year with good results.
The Icom in question is located in the EMA's radio room and we
can run it remotely using Teamviewer.

Don, using RigCAT I can get my 706 to do mode changes. I can not get the display in fldigi to display 2 meters though, even though you can click in fldigi's display and make the rig go. My rig is displaying 145.535, yet fldigi is showing _45530.000. Still when I save it, switch to another preset, then go back, it is on 2 meters and in FM mode.

Ok, Gary.

I would encourage you and or Don to pose the problems to the developers. paNBEMS is more geared toward helping folks with operations than we are bug fixes.

I get the impression that rig control is a very man hour intensive part of the NBEMS development. Think about the number of different manufacturers and different models of transceivers there are, many of which have their own different settings and standards. It must be a monumental job trying to come up with software to work within this "cluster".

The developers, if they're going to continue to make progress, need properly formatted input and feedback to continue their improvements and developments. Please report your problems to the development team by providing as much detail as possible (i.e. rig, interface, software versions, operating system, etc). Without such input, they can't solve the problems.

Ok, Gary. I'm glad you got it working.

I had always had my best luck with RigCat. I wish the XML files for the specific rigs would also make the setting changes.

FLRIG has some promise but I think it's still in it's early stages. FLRIG is working pretty well with my IC-7200.

Guys,

Kip, WB3AFL deserves the credit for the XML file for the 706.
He modified it when the original one did not work for him.

4032. RE: [paNBEMS] flrig and IC-706mkIIg

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-22 19:22:07 UTC
From: James Good
Topic: 4002 Message: 4032

Gary, Don, Dave, et al,

Most of the time I will reply directly to the person that asks a question or mentions a problem. To me it seems that when using the total NBEMS suite of programs (all of them) the only major problems that are reported are:

first, How do I configure my radio (whatever brand/model) to work with all the other equipment?

second, How does my interface (again, whatever brand/model) connect between my computer and the radio?

and third, Why is my radio not supported by a portion of the NBEMS suite (in particular, flrig)?

Short answers to the first two comments, Read the manual that came with the radio and the interface. If you did not buy the radio new, you bought it from another operator, and did not receive the manual then look on that company's web site and try to download a PDF of the manual. Failing that, an Internet search should help locate a PDF version of the Owner's manual. If possible buy and use cables specific to the interface to connect everything together.

On the third comment, the developer of Fldigi has stated several times that all the work is strictly volunteer and that there are only a very few people willing to invest the time and energy toward this project. For that I salute him (or them if there is a team). As to why a given make/model of radio might not be included in the flrig files, consider just how many different makes and models of radios are currently available and on the open market. Add to that number all of the older makes and models (Heathkit, early Collins, etc.) that are no longer even built or offered. Most of the time in order to gain full rig control of a radio by computer based software, some type of CAT cable is required (maybe the different radio companies call the cable by different names, but whatever name is used the function is the same).

If a person does not have that specific CAT (or whatever) cable to control the radio while using Fldigi, what would keep that person from using one hand to tune the radio then adjust the settings in the software?

Again, these are personal thoughts on this question. Good luck and enjoy the hobby,

Jim KD5VXH

Subject: Re: [paNBEMS] flrig and IC-706mkIIg

Ok, Gary.

I would encourage you and or Don to pose the problems to the developers. paNBEMS is more geared toward helping folks with operations than we are bug fixes.

I get the impression that rig control is a very man hour intensive part of the NBEMS development. Think about the number of different manufacturers and different models of transceivers there are, many of which have their own different settings and standards. It must be a monumental job trying to come up with software to work within this "cluster".

The developers, if they're going to continue to make progress, need properly formatted input and feedback to continue their improvements and developments. Please report your problems to the development team by providing as much detail as possible (i.e. rig, interface, software versions, operating system, etc). Without such input, they can't solve the problems.

Remote ops was the only reason I went through the trouble to do the rig control. When I'm at the station, I prefer a hand on the radio over rig control.

From: Fred VE3FAL
Topic: 4035 Message: 4035

Forwarded from HFPack Group:

Is Your Radio Growing Whiskers?

--an article by Bonnie Crystal KQ6XA

Your radio may be secretly growing whiskers inside it, if it was made after 2005. These tiny whiskers may eventually bring failure.

Tin whiskers are in the news again now, because they were found to be the cause of the infamous Toyota runaway accelerator pedals in cars.

Solder containing the element lead (Pb) has been eliminated from many electronics products due to ROHS. Restriction of Hazardous Substances...

a directive adopted by the European Union (EU) that took effect on 1 July 2006.

Even if you don't live in EU, this still can affect you, because most manufacturers in Asia adopted ROHS production processes in 2005 to enable their products to be sold worldwide.

Solder made of lead and tin has long been used in electronics. One big advantage is the lower melting point, the components are not overheated.

Many experts warned EU that taking all lead out of electronics soldering could cause huge problems, and possibly even deaths due to the microscopic conductive whiskers that form on the surfaces and edges of the element tin (Sn). These tiny pointed strands grow when they interact with air... when they get long enough, they can short out across the air gap and insulators in components and printed circuit boards.

That's exactly what happened with the Toyota accelerator pedal. Perhaps it is happening right now inside the radio of your ham station.

I think I will hang on to my out-dated radios with their old-fashioned lead solder. It seems like the value of them just went way up!

My first reaction was that this has gotta be an urban legend. But it is unfortunately apparently true. I found the following slideshow on a NASA website that does a nice job of explaining the problem.

Subject: [NBEMSham] NBEMS software update

The following applications have been updated to compile properly using either fltk-1.1.10
or fltk-1.3.0 libraries:

fldigi-3.21.36 (includes new <WX> macro tag, see
http://www.w1hkj.com/FldigiHelp-3.21/ConfigMisc.html)
flrig-1.2.6
flmsg-1.1.12
flwrap-1.3.2
fllog-1.1.1
flwkey-1.1.2

The Linux distribution maintainers have assisted me over the past
month in testing this major code update. Your distribution
maintainer should have the repositories updated soon. Source,
Linux binaries, Windows exe, Puppy pets, and OS X dmg files are
available at the main web page:

http://www.w1hkj.com/

This will effect the Windows version of Fldigi. Fltk is a cross-platform graphics library and the Windows version is built using Fltk.

However, as this is a change with mostly internal changes and little new functionality, I don't think it makes sense to upgrade to this version now. I'd hold off until some significant new feature or bugfix is in the code. Plus who knows what kinds of Fltk related issues may surface with this release.

4039. Re: [paNBEMS] FW: Is your radio growing whiskers?

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-23 20:31:50 UTC
From: Chris
Topic: 4035 Message: 4039

It's definitely true, most gov spec products state that no ROHS spec will be used due to this issue.

I'm of the belief that this was slipped through in the name of environmental friendliness but with the agenda of built in obsolescence. Also reworking lead-free solder is a special hell making it a lot easier to damage things with the heat needed to reflow it for repairs.

The source of the announcement however should be taken with a grain of salt.

She just recently posted to eham trying to mandate restrictions on 60m for only emcomm use, outlawing calling CQ and denying anyone the ability to just have a chat on 60m "In case of an emergency". She also wants a 2.4 kHz width maximum...her group is one of those who squawk at each other with recovered PRC radios and tell each other how great they sound. They use all recovered military gear and advocate ALE use on the amateur bands heh.

So the source is rather warped and unstable. The content in this case happens to be true however.

I agree Chris on many of your comments, and that group (I am a member) puch very hard for ALE and I have a hard time to understand why they would want to use that mode when others are much more reliable and easy to use. The bands are cluttered with crud now and we dont need a wider bandwidth mode used for ham comms.
Emergeny only use, when the ship hits the sand I think we will be ok and MOST, I say MOST people will let those of us involved with EMCOMM do our job.
We still have many MARS/CFARS ops out there and I know our CFARS group has a network running and we are always playing with other modes and gadgets...

The story be it all true......

My 2 cents worth

The ugly truth is too, that many that push and push for heavy regulation and procedural red tape are those that are nowhere to be found when there are actual activations.

I'm all for a method to the madness and realize things need to have a structure, but people just go too far and it gives a black eye for those of us who do show up and get the actual work done.

Our local activations (knock wood, nothing too catastrophic here) , there is never anyone running formal ICS structure...and plenty of us have the training in it. We do what we need to do, to get the information through. It's one of the major reasons I like NBEMS so much, you can crank it up anywhere without too much drama and just get traffic moving.

If people are lucky enough to have time to worry about which particular form type, frequency, bandwidth or mode to use...they are simply lucky. :-)

4044. Off The Air for a bit

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-24 17:43:37 UTC
From: Fred VE3FAL
Topic: 4044 Message: 4044

Gang:

I will be off the air for a while because my digital dedicated Dell D600 has finally went south and will not function. This computer has been used for many years by me for dedicated digital ops and just last week the screen started to turn off and the mouse stopped working. The screen has a red background when I turn it on and after about 2 minutes shuts itself off, I can use a outboard monitor with no problems and a USB mouse, but the computer for portable use is no more. I am looking for another laptop to replace it for EMCOMM NBEMS stuff as we type.

Reading on the net tells me this is a common issue as this unit gets older, possible inverter problem and or other issues.

Will let you know what I find but for now I will be in monitor mode only..

Fred

Good luck there, Fred. We'll miss you while you're down.

I get email adds from TigerDirect and they quite often will have good laptops around the $300-$400 price point. I bet you might be able to find a good used Netbook now that many folks are moving to tablets.

Gang:
I will be off the air for a while because my digital dedicated Dell D600 has finally went south and will not function. This computer has been used for many years by me for dedicated digital ops and just last week the screen started to turn off and the mouse stopped working. The screen has a red background when I turn it on and after about 2 minutes shuts itself off, I can use a outboard monitor with no problems and a USB mouse, but the computer for portable use is no more. I am looking for another laptop to replace it for EMCOMM NBEMS stuff as we type.

Date: 2012-01-26 20:26:01 UTC
From: lshields20
Topic: 4047 Message: 4047

I have uploaded a file containing instructions for using a Kenwood TM-V71 or TM-D710 transceiver with fldigi. It took me some serious experimenting to get it to work as I wanted, but it was worth it. This file should save someone some time and effort. If you have any questions or suggestions, please contact me through this group.

One correction.

With a Signalink USB, the windows software mixer levels should always be at 100%. Changes to TX or RX levels should only be done using the knobs on the front of the Signalink.

Changing the software device mixer levels will have poor results, they do not do what you are expecting them to do.

I believe Tigertronics has more detail on this on their site, but fundamentally, never use the software controls.

Chris,

Actually, the instructions from Signalink say to set the WAVE output volume to 50% and the speaker output to 100%. This results in an output more like 50% than 100%. I chose to leave mine all at 100% as you suggest.

The only ill effect from using the windows volume control is that the Signalink USB depends on the audio level to sommand PTT. In other words, it works like a VOX. If you set the Windows Volume Control low enough for the proper output level to be achieved, PTT does not occur.

Les

Reminder from: paNBEMS Yahoo! Group
http://groups.yahoo.com/group/paNBEMS/cal

Sunday 10am ET paNBEMS Directed Net
Sunday January 29, 2012
10:00 am - 11:30 am
(This event repeats every week.)
(The next reminder for this event will be sent in 18 hours, 3 minutes.)
Location: 3.5835 USB / 1000 Hz center on the watefall

Notes:
Net ops on Olivia 8/500, bulletin transmission MT63 1k long (64 bit interleave), testing of FLMSG/WRAP.

Net usually transitions to 40m 7.073 USB, using same modes, at around 11am ET.

All are welcome, with our without traffic.

4051. Winter Field Day Today (Saturday)

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-28 15:47:51 UTC
From: KB3FXI
Topic: 4051 Message: 4051

Hello all,

Just a reminder that Winter Field Day starts today, Jan 28, 2012 at Noon ET and runs for 24 Hours.

Get on and make some FLMSG message exchanges!

-Dave, KB3FXI

Hello all,

I would like to encourage NBEMS participation in the 2012 SPAR Winter Field Day from 1700 UTC (12:00 noon EST) Saturday January 28, 2012 through 1700 UTC (12:00 noon EST) Sunday January 29, 2012.

After basic exchange, ask the other station if they can receive FLMSG. If they respond in the affirmative, send FLMSG message containing the log of all the other reports your station received to that point.

Here's how the basic exchange might look...

###############

w3yj de kb3fxi
pse copy my
kb3fxi, 599, 1h

I copy ur
w3yj, 579, 1h

pse advise if you can receive NBEMS/FLMSG message of my current contact log

###############

And here is how the FLMSG message would look...

###############

freq, mode, date, time, my call, rst exch, rx call, rx rst, exch
3.583 Oliv, 2012-28-01, 1711, KB3FXI, 599, 1H 35F, WB5XAC, 599, MO 13C
7.073 Oliv, 2012-28-01, 1720, KB3FXI, 559, 1H 35F, k3zzy, 579, 1h 35F
7.073 Oliv, 2012-28-01, 1733, KB3FXI, 579, 1H 35F, k7cxx, 569, 1h 13C
7.073 Oliv, 2012-28-01, 1745, KB3FXI, 599, 1H 35F, wb9asp, 599, 1i 23F
7.073 Oliv, 2012-28-01, 1755, KB3FXI, 599, 1H 35F, kb3zya, 599, MO 11C
7.073 Oliv, 2012-28-01, 1815, KB3FXI, 549, 1H 35F, aa5ca, 559, 10 60F

w3yj de kb3fxi
pse advise if 100% confirmed

##########################

As we get further through the event, the log would get longer and the exchange more challenging.

I would encourage message exchanges on the following NBEMS frequencies:

28.128 USB
14.064 USB
7.073 USB
3.5835 USB

Recommended modes:
Olivia
Thor
MT63
PSK (R)
BPSK

The official rules can be found at the SPAR web site:
http://www.spar-hams.org/contests/winterfd/index.php?pg=2

4053. Sunday Jan 29 report

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-29 17:30:28 UTC
From: KB3FXI
Topic: 4053 Message: 4053

Hello all,

Good net this morning with better conditions on 40m than on 80.

We even did an FLMSG test on 40m with PSK500R with fairly good results... good-golly that mode is fast. PSK250R and 500R may be good emcomm options between stations that have established a near full-quieting path. But for general conditions, we're still sticking with Olivia and MT63. It is fun and constructive to play with some of the other modes.

We had 13 on the net this morning including ncs.

I hope to see and hear a bunch of folks on the 145.530 MHz FM simplex test schedule this Wed eve at 9:30 PM. The goal is to get enough folks involved to handle relays over as wide of an area as possible. I will most likely be operating from WX3SKY near New Kensington PA. Please spread the word. Info is on our main page at www.paNBEMS.org

BTW, I'll be monitoring 145.530 MHz here all day and evening. If you're within range of the WPA area, jump on and put out a call.

After you enter your log info, click the icon with the envelope and arrow at the top left to register it. If you change info in the log, there is an Update button at the bottom of the log you must click. (This is from memory because I am not at my shack.)

Hi Paul,

Thanks or replying. I did what you suggested. I saved the contact info. It showed up in the log. I left the logbook went back to fldigi. I left Fldigi and went back into Fldig. I went back into the log book and the contact info was gone. The save button I am clicking is left of the "QTH" , below the broom and to the bottom right of the frequency display.

Also every time I go back into Fldigi I have to choose the sound card to be used.
Don't know if this has anything to do with the log book?

Thank you for the help.

I am surprised your sound card configuration isn't saved. Go up configure in the menu bar and go to the bottom and click save config. There must be some setting that is kicking you back to the beginning. It should save the log book automatically or prompt you after you have changed settings asking if you want to save them. Harry at W3YJ is good at diagnosing and solving these problems.

4059. FLdigi: Audio/Settings

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-30 12:21:29 UTC
From: jimkennedyjlk
Topic: 4059 Message: 4059

Trying to get my old COMPAQ laptop, with Windows 2000, to function with FLdigi.

My present 'Audio/Settings' are probably inappropriate.

Also, I'm uncertain about how to get CheckSR.exe to work, because present Audio/Settings are as follows:

Sample rate:

'AUTO': Capture
'AUTO': Playback
'Best Sinc Interpolator' (Converter)

Corrections:
'0':RX ppm '6750': TX ppm '0': TX Offset

What does 'NATIVE' mean? (E.g., '44100 Native'?)

It appears that CheckSR.exe cannot function when 'AUTO' is specified.

Anyway, any suggestions on what 'sample rate' (and other) settings s/b entered?

Thx,

Jim -kd0ozo

In Fldigi, go to Help and then the Audio device info menu. This will show you your native audio frequency. Plug this into CheckSR.exe and maybe you'll have better luck.

Win2K is pretty old, and this also suggests old and very slow hardware. If you're on a tight budget, you might be better off finding a used or refurbished machine than can run at least Windows XP.

Jim,

Here's the paNBEMS.org page on calibration. You should find the video very helpful, too: http://panbems.org/fldigi_calibration.htm

Just follow the instructions but only let the CheckSR program run for about 2 minutes. We used to recommend 10-15 minutes but 2 minutes is actually better.

I'm not sure if you're just playing around with FLDIGI or if you're really interested in emcomm. If you're into emcomm, I'd highly recommend getting a newer/used computer. NBEMS does not list Windows 2000 as a supported OS, but I have heard that it works fine. I'm guessing your computer must be at least 10 years old and something is bound to fail on it soon. I follow TigerDirect and regularly see very nice new laptops in the $350 - $500 range and I'm sure you could get a good used computer only a few years old for a lot less.

'Best Sinc Interpolator' (Converter)

Corrections:
'0':RX ppm '6750': TX ppm '0': TX Offset

What does 'NATIVE' mean? (E.g., '44100 Native'?)

It appears that CheckSR.exe cannot function when 'AUTO' is specified.

Anyway, any suggestions on what 'sample rate' (and other) settings s/b entered?

Thx,

Jim -kd0ozo

4063. Re: Logbook not saving contacts. update

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-01-30 19:29:51 UTC
From: ze-kile
Topic: 4055 Message: 4063

I went to an older version of fldigi 3.21.19 that I have on a thumb drive. I entered some contact information and clicked save. The info was in the log book. I clicked out of Fldigi 3.21.19 and the opened
it again. The contact info was gone. I have seen a file extension mentioned of .adi but can not find it in my files. Before exiting the Fldigi 3.21.19 I changed a macro. It was saved and upon exiting the question "do you want to save macro" came up. I ave no clue as to what to look for. Any suggestions would be helpful.
Thanks,
kb8mua

Fantastic, John.

Do you have a list of the participating repeaters? I'd like to listen in if I could.
145.290 (Glenshaw) and 146.835 (Seven Springs) are the only two Wan repeaters I can hit reliably.

Hi Dave,

Right now the repeater control folks tell me that they have things set for the 145.21 and 145.39 repeaters. Those are local to Cambria County. However, we should be able to work through K3WS and KA3ORS to expand that list. I just spoke with Dave, WB3JSW, the net control about the possibility of expanding the list. More info as it arrives.

Ok, John.

I understand if your intent is to keep the net local and not open it up to a wide area. There's a good chance I can hit one of those repeaters from WX3SKY, too. I just don't want to have you changing any plans for me, unless you do want to open it up to a wider area. I'm not sure if the WAN system is conducive to digi ops. Folks over a wide area may not want to here digi modes.

Dave,

In Cambria County we are all just starting out so the first few weeks are intended to help all get up to speed. The use of only a few local repeaters is to ensure that everyone can participate without hitting the 40 plus repeaters of the WAN System. That would be a tad chaotic. The general plan is to soon move to our Cambria County simplex frequency of 147.55 just as you are utilizing 145.53. As we develop digital operating skill we hope to test and develop as many links as we can for ARES communications. That includes HF, VHF and UHF. In addition two operators are already preparing portable systems for the March 31st Scout Radio Merit Badge day and special events station K3B. Details are on www.cambriaradio.com <http://www.cambriaradio.com/> . Of course there is Field Day in June. We have a long way to go. However, the programs that you and W3YJ have prepared are a great help. The practice has been very valuable also. Our entire group is looking forward to the ARES program scheduled here in Johnstown!

By the way, I can hear WX3SKY directly on 2 FM and on 20. Your 20 meter net decodes 100%.

Good question, Fred.

I think we could all use some help on many of the macro functions, including this one.

I wonder if anyone on the list has any answers.

BTW, I would recommend against the latest upgrades for emcomm use until they have some of the recent bugs worked out.

4075. FLDIGI AND THE FULTON COUNTY (PA) EOC CERTIFICATION EXERCISE

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-01 15:14:51 UTC
From: DL3
Topic: 4075 Message: 4075

FLDIGI AND THE FULTON COUNTY (PA) EOC CERTIFICATION EXERCISE

All,

I thought I would pass this along to the group:

I had the pleasure of being asked to participate in the Fulton County (PA) EOC Certification Exercise Friday evening (January 27th), along with Daniel, KB3MUN (Franklin County ACS/ARES/RACES EC) and Steve KA3UDR (Bedford County ARES EC). Since Daniel knew that I do a lot of work with FLDIGI, he asked me to bring my laptop and setup FLDIGI/FLMSG to handle traffic. And, I was interested too, as this was my first time using FLDIGI in a real EMCOMM situation/drill.

W3TMB, Travis, from the PEMA team, generated traffic from their SIMCELL (where they directed the exercise) for us to handle.. 13 messages were sent via with only 2 retries. We used MT63-2000 mode, since I felt that was the fastest/most error resistant mode available...and was one of the modes I had practiced with the most.

We were using 2 meter simplex FM, and HT's, since the PEMA crew were located close by in another part of the EOC. I ran a cable from the output of my ICOM ICW32A HT to my laptop (for receiving), and used audio coupling to send (W3TMB was using a Signallink USB interface with his HT's). I received a bunch of messages, but didn't get a chance to send any (except for a test message)!! We decided to send outgoing messages via voice, just to practice our voice message handling technique...which was OK with me (always need to practice as many modes as possible.)

I had one small glitch with the laptop and the wireless card, so I didn't have time to connect my laptop to the EOC's wireless network for printing before the exercise started. However, Daniel, KB3MUN, had connected his laptop to the printer, so.. by using a flash drive, we were able to transfer messages between computers to get them printed out (Just a note, if you are working in an EOC, ask the officials if you can connect to their wireless network and printer. It really makes things a lot easier to be able to print out the messages!!)

We had a couple of PEMA and local officials stop by the radio area, and I explained what we were using. I think they were interested and impressed with the software, and the way we were passing message traffic quickly and smoothly.

Overall, I was very impressed with FLDIGI. I have a little “tweaking” to do (with the copy that is installed on that particular laptop), to make it work smoother. But the software made the message handling 100% easier than the old way of hand-writing messages (we did handle some messages that way).

I would like to thank Daniel and Steve for their assistance, and the Fulton County EOC staff for allowing us to access their wireless network, and use their printer).

FLDIGI AND THE FULTON COUNTY (PA) EOC CERTIFICATION EXERCISE

We did a very similar operations in York County several months ago. Our new County EMA Director had a PEMA Certification Drill and York ARES RACES SKYWARN (YARS) operated digital communications using FLDIGI/FLMSG. We sent and received more that 15 messages (ICS-213) during the drill.

YARS also operates during the annual TMI or Peach Bottom Nuclear Power Plant drills. We have demonstrated NBEMS the last two years. This year we have committed to digital as our primary communications method, with voice as back-up.

The South Central Task Force (SCTF) Amateur Radio Work Group (ARWG) held another training session for new NBEMS operators on Monday night. I think the count was about 12 Hams participating. The SCTF/ARWG region, which includes Franklin, Adams, York, Lancaster, Lebanon, Dauphin, Cumberland and Perry Counties, is getting very active with the use of FLDIGI etc.

Jack,

One question: has anyone come up with some frequencies/repeaters that
we can use to move messages around the South Central area (without
using HF)?? I haven't heard anything, but I would be curious to know
if there are some plans out there.

From: kb3lsm@gmail.com
Topic: 4082 Message: 4082

I just got back from surgery, I've been catching up on the messages. I see there is some action on vhf. So is 145.530 where we are going to set our dials? I will tune in.

Thanks to David's how to send wrap messages in fldigi video, http://www.youtube.com/watch?v=LZ3OXL8hrgQ&list=UUICw5mdYz9mmtVO9WHs-a_A&index=1&feature=plcp I think I got the hang of it...

Dave,

Just a note for evaluating WX3SKY simplex coverage east to the Johnstown area.

I listened on 145.530 from 9:30 pm until 9:45. No dice. However, earlier in the evening you were full quieting into the 145.39 repeater in the Richland section of Johnstown which at roughly 2350 feet The Richland repeater is 10.5 miles from the 2700 foot Laurel Ridge. I live at 1700 feet but have to cross the Laurel Ridge at a distance of 5 miles. With a discone antenna that is not a fair set of factors for evaluating coverage.

Bottom line - you should be effective from WX3SKY to the Richland section of Johnstown to stations with vertical antennas of moderate gain. Very promising for ARES linking into the Johnstown area of Cambria County.

John, W3IW

Subject: [paNBEMS] 2m Simplex Schedule reminder

Those of you in range are welcome to try us on 145.530 MHz FM simplex tonight at 9:30pm ET. I'll be NCS from WX3SKY, Skyview Radio Society near New Kenington,PA in Southwestern, PA.

We'll be taking check ins on phone/voice and sending FLMSG messages with MT63 2k long.

Topic: 677 Message: 4085

Hello to all on the group,
After the new 2 mtr. net in W. Pa. I had a few words with KB3FXI ref. to a 2 mtr. net here in Columbiana Co. Ohio where we tried a simplex repeater in the mix.
It worked well but will say will take a few nets for everyone to get familiar with the way it works.
Here is a cut and paste from the companies website of the repeater which I bought at Dayton last year for about $89.
Simplex RepeaterADS-SR1 Simplex Repeater

(Available through our online store)

The ADS-SR1 is a multi-function voice recorder device that connects to virtually any handheld, base, or mobile radio. It features exceptional voice recording quality and higher capacity than any other comparable device on the market.
Simplex Repeater
A simplex repeater records incoming transmissions and retransmits them on the same frequency. This has the effect of doubling the time required to transmit a message, but while a traditional repeater typically costs thousands of dollars and might be semi-portable at best, a simplex repeater can be set up with a single handheld radio and operated from batteries. This makes it perfect for disaster response, home or campground use, and any place where radio range needs to be extended but the cost and complexity of a traditional repeater canï¿½t be justified. Additionally, the unique ï¿½say againï¿½ repeat-on-demand feature of the ADS-SR1 allows it to be operated in silent mode, repeating transmissions only when requested. This can be used to repeat a missed transmission or to check for missed calls, even hours or days after the last transmission was heard by the repeater.
Voice Mail
The ADS-SR1ï¿½s voice mail function operates like a telephone answering machine, allowing users to record messages for later retrieval. Up to 20 incoming messages can be recorded, and a separate voice mail access code lets multiple users retrieve messages without having to share the repeaterï¿½s regular security code.
Voice Beacon
Up to 10 voice announcements can be stored in the ADS-SR1ï¿½s non-volatile memory. Each message can be set to transmit at a specified interval, and a time offset setting allows beacons to be staggered or rotated. Intervals can be from a few seconds up to twelve hours. One message can also be configured to play in response to an incoming transmission. This can be used for repeater identification, or to provide instructions on using the repeater or voice mail. A separate inhibit timer stops the message from playing again for a specified time interval.

218 seconds total recording time
19.2 kHz sample rate for excellent voice clarity and SSTV compatibility
10 voice announcements with independent timers
Programmable maximum message length setting
20-year data retention with no power
Optional Morse code or voice identification

DTMF remote control for all functions
Operates from two AA batteries or external 4-28 V DC supply
ï¿½Say agaiï¿½ function repeats last received transmission on command
Selectable courtesy tones
Audio output adjustable in hardware and by remote command
PTT modes for handheld and mobile radios
Upgradeable software for future enhancements
Programmable security code with auto-lock feature
Unit remains controllable even with stuck receiver squelch
1 year warranty on complete unit, 5 years on flash memory.

The company is Argent Data Systems

I have it hooked to a Yaesu Ft-2200 mobile, or anyone one of my Alinco portables.

It takes its power from the mobile so battery issues is not a concern, and so far while hooked to a portable the batteries will last a very long time.

We have ran Digital thru it and it works well retransmitting what ever it receives,but did have to move any transmissions to at least 1100 or higher on the waterfall,below 1100 it would not repeat.

All in all it worked great for us.

I got one of these a few years ago and we used it a bit for voice in conjunction with a HT. Worked very well although, as noted, you have to get used to the store and repeat function.

Never tried it with digital but I can see it being very useful. Mine's been packed away but I think I'll pull it out of retirement.

Thanks for the digital suggestion and operation hints.

There is a simplex repeater Yahoo group.

I am thinking of trying one of these too.... what modes are you using? Will it work with MT63-2000? That is 2K wide on the waterfall. It would be hard to move that up all above 1100 Hz and still be in the radio passband.

Gary,

When you do the test on MT63 2k long, please do so at 1500 Hz center. I'm curious to know if that default spot will work. MT63 will tolerate a lot of lost signal in the passband and works well even with very light audio, so I suspect you'll have good results.

This makes it perfect for disaster response, home or campground use, and any place where radio range needs to be extended but the cost and complexity of a traditional repeater canï¿½t be justified. Additionally, the unique ï¿½say againï¿½ repeat-on-demand feature of the ADS-SR1 allows it to be operated in silent mode, repeating transmissions only when requested. This can be used to repeat a missed transmission or to check for missed calls, even hours or days after the last transmission was heard by the repeater.
>Voice Mail
>The ADS-SR1ï¿½s voice mail function operates like a telephone answering machine, allowing users to record messages for later retrieval. Up to 20 incoming messages can be recorded, and a separate voice mail access code lets multiple users retrieve messages without having to share the repeaterï¿½s regular security code.
>Voice Beacon
>Up to 10 voice announcements can be stored in the ADS-SR1ï¿½s non-volatile memory. Each message can be set to transmit at a specified interval, and a time offset setting allows beacons to be staggered or rotated. Intervals can be from a few seconds up to twelve hours. One message can also be configured to play in response to an incoming transmission. This can be used for repeater identification, or to provide instructions on using the repeater or voice mail. A separate inhibit timer stops the message from playing again for a specified time interval.

Gary,

When you do the test on MT63 2k long, please do so at 1500 Hz center. I'm curious to know if that default spot will work. MT63 will tolerate a lot of lost signal in the passband and works well even with very light audio, so I suspect you'll have good results.

I am thinking of trying one of these too.... what modes are you using? Will it work with MT63-2000? That is 2K wide on the waterfall. It would be hard to move that up all above 1100 Hz and still be in the radio passband.

The York Net and the Digital roundups have had members on from all over our area exchanging digital traffic.

With the amount of checkins and traffic sounds like we may need another net for digital traffic?

Maybe one focued on message handling, responses, file transmissions, NTS traffic, forms like the HEARS, ICS and Red Cross

forms?

Everyone expected to bring at least one piece of traffic to send with relays to and from other VHF and HF nets welcome.

Different stations taking net control to experience administering a digital net?

Jack,

One question: has anyone come up with some frequencies/repeaters that
we can use to move messages around the South Central area (without
using HF)?? I haven't heard anything, but I would be curious to know
if there are some plans out there.

4093. 2m Simplex test report

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-03 15:06:59 UTC
From: KB3FXI
Topic: 4093 Message: 4093

Hello all,

As you all know, we conducted our first scheduled 2m FM simplex net on Wed Feb 2nd which ran from 9:30pm to a little after 10:30pm.

We had a decent turnout, and, I think it's safe to say, we had a very interesting and very fun net.

My most memorable part of the net for me was the 2 hop relay we pulled off from WX3SKY (Skyview Radio Society) near New Kensington PA in Westmorland County to WA3LTB, Terry in Erie. Gary, KC8YJJ in Toronto OH did the first relay and KB8HTU, Gary in Westpoint OH did the second relay. I could not hear Terry, WA3LTB, in Erie at all at Skyview.

I was hoping we could have reached the stations out East. Shortly before our net, I was able to hit the 145.210 repeater in Cambria and successfully passed an FLMSG message to the NBEMS NCS (WB3JSW). I got in at the very end of the net but they did report that it was their 2nd NBEMS net on the repeater and had 12 folks on board.

We could really use a station on one of the mountain ridges. IF we did, I bet we could work relays all the way to York and Harrisburg, both areas of which have active NBEMS ops.

Anyway, we'll be keeping the formal schedule running for the FIrst Wed of every month at 9:30 pm on 145.530 but we'll I'd also like to encourage an informal ragchew mode for the other Wed eve's of the month, same time, same channel.

Thanks to all who joined in. Please spread the word and encourage any and all to join us on 2m simplex. Our success on the simplex ops will be dependent on participation, both strength in numbers with average/typical stations and a handfull of big gun stations with high-gain yagis. Please do your best to bring some now folks aboard.

Thanks.

-Dave, KB3FXI
www.paNBEMS.org

Here's the station list that I had as NCS at WX3SKY:

wx3sky (NCS), PA
kb8htu, OH (relay to ncs de kc8yjj)
kc8yjj, OH
n3tn, PA
k3mbn, PA
kb3nsj, PA
wa3zje, PA (relay to ncs de n3tn)
k8les, WV
w3kwy, PA
wa3ltb, PA (relay to ncs de kb8htu, kc8yjj)

4095. TS480 on WINMOR

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-03 16:16:41 UTC
From: wb0kgn@q.com
Topic: 677 Message: 4095

With my TS480sat I have a latency of 380 milliseconds. WINMOR and V4chat will only work with a latency of 250 ms or less (in the ARQ modes). I am wondering if there is anyone with a TS480 who has solved this problem who can tell me how they did it.

Dave,

What interface are you using? I'm using the USB Signalink and I always have to remember to turn the delay pot down when I go to Winmor. I think i'm at under 50 ms latency with the IC7200.

-Dave, KB3FXI

BTW, once you get it worked out, lets try sending some bulk messages on Peer to Peer. I'm not a big fan of the nodes/robot ops but I see great potential for the peer to peer ops with the 1600 Hz winmor mode. In a previous test, we moved 30k of data in under 10 minutes.

The TS480 does not require an external interface for either sound card or CAT. It uses either the digital vox where audio comming from the computer triggers the vox, or a software command to trigger the ptt line. WINMOR has the software command. Neither way goes fast enough. I am hoping against hope that there is some setting in the menu I have screwed up.   And it peer to peer that I have in mind.

Check your menu on the TS480 for vox settings then turn vox delay to 0. Had a similar problem with the TS590 and the the vox delay set to minimum did the trick. Now I get very low latency times.

Thanks Joe. I was ready to swear on a stack of qsl cards that my radio did not have a vox delay, and if it did, it wouldn't work in the digi modes. But before I did that I thought I had better read the manual. AND THERE IS WAS...A VOX DELAY...AND IT WAS A LONG WAYS FROM ZERO. Resetting it to zero did the job.

Subject: ARLB002 New Rules for 5 MHz (60 Meters) To Go Into Effect March 5

SB QST @ ARL $ARLB002
ARLB002 New Rules for 5 MHz (60 Meters) To Go Into Effect March 5

ZCZC AG02
QST de W1AW
ARRL Bulletin 2 ARLB002
From ARRL Headquarters
Newington CT February 3, 2012
To all radio amateurs

SB QST ARL ARLB002
ARLB002 New Rules for 5 MHz (60 Meters) To Go Into Effect March 5

On November 18, the FCC released a Report and Order (R&O), defining
new rules for the 60 meter (5 MHz) band. These rules are in response
to a Petition for Rulemaking (PRM) filed by the ARRL more than five
years ago and a June 2010 Notice of Proposed Rulemaking (NPRM). In
the February 3 edition of the Federal Register, the FCC announced
that these new rules will go into effect on March 5, 2012.

Details can be found at,
https://www.federalregister.**gov/articles/2012/02/03/2012-**
2477/amateur-radio-use-of-the-**allocation-at-5-mhz<https://www.federalregister.gov/articl
es/2012/02/03/2012-2477/amateur-radio-use-of-the-allocation-at-5-mhz>

In summarizing the new rules, the FCC explained that the new rules
amend the current rules to facilitate more efficient and effective
use by the Amateur Radio Service of five channels in the
5330.5-5406.4 kHz band (the 60 meter band): "Specifically, and
consistent with our proposals in the Notice of Proposed Rulemaking
in this proceeding, the Commission replaces one of the channels with
a less encumbered one, increases the maximum authorized power

amateur stations may transmit in this band and authorizes amateur stations to transmit three additional emission designators. The Commission also adopts an additional operational rule that prohibits the use of automatically controlled digital stations and makes editorial revisions to the relevant portions of the Table of Frequency Allocations and our service rules."

The Amateur Radio Service in the United States has a secondary allocation on 60 meters. Only those amateurs who hold General, Advanced or Amateur Extra class licenses may operate on this band. Amateur stations must not cause harmful interference to -- and must accept interference from -- stations authorized by any administration in the fixed service, as well as mobile (except aeronautical mobile) stations authorized by the administrations of other countries.

4102. Winmor test today??? was: TS480 on WINMOR

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-04 16:57:17 UTC
From: David Kleber
Topic: 677 Message: 4102

Dave and Joe (K3JV),

Are either of you, or anyone else with winmor, available for a test today? I have a zip file of 10 FLMSG html messages I'd like to try to send, peer to peer.

Let me know at time and spot on which we can test.

I'm going to monitor 7.073 USB here most of the day... give a call on 8/500 olivia.

Subject: Re: [paNBEMS] TS480 on WINMOR

Thanks Joe. I was ready to swear on a stack of qsl cards that my radio did not have a vox delay, and if it did, it wouldn't work in the digi modes. But before I did that I thought I had better read the manual. AND THERE IS WAS...A VOX DELAY...AND IT WAS A LONG WAYS FROM ZERO. Resetting it to zero did the job.

Check your menu on the TS480 for vox settings then turn vox delay to 0. Had a similar problem with the TS590 and the the vox delay set to minimum did the trick. Now I get very low latency times.

Subject: Re: [paNBEMS] TS480 on WINMOR

The TS480 does not require an external interface for either sound card or CAT. It uses either the digital vox where audio comming from the computer triggers the vox, or a software command to trigger the ptt line. WINMOR has the software command. Neither way goes fast enough. I am hoping against hope that there is some setting in the menu I have

screwed up. And it peer to peer that I have in mind.

Subject: Re: [paNBEMS] TS480 on WINMOR

Dave,

What interface are you using? I'm using the USB Signalink and I always have to remember to turn the delay pot down when I go to Winmor. I think i'm at under 50 ms latency with the IC7200.

-Dave, KB3FXI

BTW, once you get it worked out, lets try sending some bulk messages on Peer to Peer. I'm not a big fan of the nodes/robot ops but I see great potential for the peer to peer ops with the 1600 Hz winmor mode. In a previous test, we moved 30k of data in under 10 minutes.

4104. W3YJ-R Echolink node is back up

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-05 16:11:07 UTC
From: Harry Bloomberg
Topic: 4104 Message: 4104

The W3YJ-R Echolink node connected to the 443.45 repeater is back up. We also lowered the audio level going from the computer to the link tranceiver, so hopefully this will help folks trying to copy MT-63 through Echolink.

73,
Harry Bloomberg W3YJ

WINMOR

Dave and Joe (K3JV),

Are either of you, or anyone else with winmor, available for a test today? I have a zip file of 10 FLMSG html messages I'd like to try to send, peer to peer.

Let me know at time and spot on which we can test.

I'm going to monitor 7.073 USB here most of the day... give a call on 8/500 olivia.

on WINMOR

Thanks Joe. I was ready to swear on a stack of qsl cards that my radio did not have a vox delay, and if it did, it wouldn't work in the digi modes. But before I did that I thought I had better read the manual. AND THERE IS WAS...A VOX DELAY...AND IT WAS A LONG WAYS FROM ZERO. Resetting it to zero did the job.

Check your menu on the TS480 for vox settings then turn vox delay to 0. Had a similar problem with the
TS590 and the the vox delay set to minimum did the trick. Now I get very
low latency times.

Subject: Re: [paNBEMS] TS480 on WINMOR

The
TS480 does not require an external interface for either sound card or CAT.
It uses either the digital vox where audio comming from the computer triggers
the vox, or a software command to trigger the ptt line. WINMOR has
the software command. Neither way goes fast enough. I am hoping
against hope that there is some setting in the menu I have screwed
up.   And it peer to peer that I have in mind.

Subject: Re: [paNBEMS] TS480 on WINMOR

Dave,

What interface are you using? I'm using the USB Signalink and I
always have to remember to turn the delay pot down when I go to Winmor. I think
i'm at under 50 ms latency with the IC7200.

-Dave, KB3FXI

BTW, once you get it worked out, lets try sending some bulk messages
on Peer to Peer. I'm not a big fan of the nodes/robot ops but I see great
potential for the peer to peer ops with the 1600 Hz winmor mode. In a previous
test, we moved 30k of data in under 10 minutes.

Ok, Joe... I'm on 7.073 USB right now at 1000 Hz center waterfall, 8/500 olivia.

I had to get a relay from W3IW this morning on kb3pcy on 80m, but I got the message. He was stronger on 40m but he lost me when I tried MT63 1k long there with a resend of our messages from earlier in the net. You were much stronger. Maybe your station has a better NVIS configuration?

Great will look for you then.

PS How did KB3PCY make out, I know you were having some difficulty with the signals on 80 M this morning. I had no trouble copying you though you were 57 to 59 at my QTH. Martin is about 12 miles south of me but I don’t know what he has for a antenna.

Thanks

http://weather.rap.ucar.edu/surface/stations.txt

This web site has all the METAR station codes.

To configure the macro first go to the above website (or any of your choice) and get the METAR id. Form there go to configure, misc, WX tab, and fill in the ID. Pitt is KPIT and Wheeling is KHLG as examples. It might be a good idea to make a list of any possibilities you may need. Where the WX tab asks for the METAR ID, I think it should be the 4 letter ICAO code.

Save and Close.

Now right click on a blank macro button. in mine I put the following:

<TX><WX>

DE <MYCALL>

<RX>

I changed the Macro button Lable to "WX". Click apply and close.

Dont forget to go to file, Macros, save.

Thats all it takes.

Hope this helps,

Gary - KC8YJJ

I didn't have any immediate plans for that. In fact, I have not even tried WEFAX yet and I'm not sure I see much utility in it for emcomm, but I could be wrong. I think in a major emergency, we're going to have plenty of plain text and csv spreadsheets to handle without the extra complication of working with acquiring, manipulating, sending and receiving graphic files.

WEFAX could be fun to play with but I'm wondering if you've gotten any requests for this type of service from any served agencies.

Dave and Harry,

I am in the process of setting up a digimode group here in Baton Rouge. This weekend we are building a digital interface as a club building project, and then we will start practicing on the air stuff. My plan is to have a regular digital net on one of the repeaters in town. I am going to make abundant use of the useful training material that you
folks have put up for NBEMS, and I cannot thank you enough for doing this.

In looking at training people on fldigi, I fear that the software is starting to become too feature-rich. My initial view of the software, sending plain text and spreadsheets, is what I found so much more appealing than other choices like D-STAR.

The number of tabs available in fldigi is really quite daunting to the newcomer. Each new feature, while useful eventually to some, just makes the initial learning curve a bit more challenging. I am quite concerned when I see adding WEFAX features to this. In an emcomm situation, I can see that 'just the basics' might be loads easier.

Is it possible that a stripped down version of fldigi/flmsg/flwrap might be split off from the current version?

Dana Browne

Dana:

The software although looks daunting really is a breeze to learn and run. Most features once set do not need any changes. The biggest issue now of course is the constant updating and removing of old programs but all this is for the good of NBEMS and EMCOMM to have what we feel is needed in one package. If you have not used MultiPSK before or if you have then you will see that is a major busy program that can be very confusing at times with its editor making constan upgrades as well.

There are some nice PPT presentations and documentation to help for these purposes. We all learned how to use this program by trial, error and lots of on air practice..

Dave and Harry,

I am in the process of setting up a digimode group here in Baton Rouge. This weekend we are building a digital interface as a club building project, and then we will start practicing on the air stuff. My plan is to have a regular digital net on one of the repeaters in town. I am going to make abundant use of the useful training material that you folks have put up for NBEMS, and I cannot thank you enough for doing this.

In looking at training people on fldigi, I fear that the software is starting to become too feature-rich. My initial view of the software, sending plain text and spreadsheets, is what I found so much more appealing than other choices like D-STAR.

The number of tabs available in fldigi is really quite daunting to the newcomer. Each new feature, while useful eventually to some, just makes the initial learning curve a bit more challenging. I am quite concerned when I see adding WEFAX features to this. In an emcomm situation, I can see that 'just the basics' might be loads easier.

Is it possible that a stripped down version of fldigi/flmsg/flwrap might be split off from the current version?

I didn't have any immediate plans for that. In fact, I have not even tried WEFAX yet and I'm not sure I see much utility in it for emcomm, but I could be wrong. I think in a major emergency, we're going to have plenty of plain text and csv spreadsheets to handle without the extra complication of working with acquiring, manipulating, sending and receiving graphic files.

WEFAX could be fun to play with but I'm wondering if you've gotten any requests for this type of service from any served agencies.

Fred,

I have used MultiPSK, HRD, fldigi and others. I am one of the local digi enthusiasts. I am not concerned so much about myself, but introducing this to the newcomers. Lots of tabs and buttons can be very intimidating to them, and newcomers are very good at clicking buttons that should be left alone. :)

Dana,

There are settings in FLDIGI to turn off many of the advanced setting views on the GUI.
 And, if all you want to focus on is sending plain text and spreadsheets, just don't use FLMSG.

IMO, if you have someone unable to figure out how to select the correct tab, fill out the form and then send, they're probably not too well suited for digital emergency communications.

Dave KB3FXI is right...there are options in Fldigi to limit what is displayed to the operator. I'm not at my station right now so I can't look for these options, if nobody emails you where this is under the Fldigi menu system, I will this evening.

For sending plain text, try using the plain text tab in Flmsg...you can send a file with one mouse click using the Auto Send feature.

One trade off in Fldigi design is emcomm vs recreational use. The ability to use Fldigi for everyday hamming is very valuable. It means that you're always proficient on how to use the software, and it helps ensure that in time of need, you and your station will be up to the task. Much of this new functionality is for recreational hamming, but I believe Fldigi would be less useful if it was emcomm only.

Glad to hear of your efforts in Baton Rouge...please let us know how else we can help you.

In Fldigi, go under View and then select the Controls submenu. You'll see options for hiding portions of the Fldigi program to make it a bit less intimidating. Perhaps View->Controls->None will work for your operators.

I've been thinking about this a bit....

I would suggest starting your members with Flmsg first as it has the simplest workflow. I know the WPA ARES training materials do not introduce Flmsg until later, and we train in sending spreadsheets before we show Flmsg...maybe we need to rethink that also.

Guys:

I noticed the Macro folder is non-existent in the last few updates and that they want to save in FLMSG. Is this where it always was.

My macros do not want to save now when I change them and revert to the old ones, thus the reason my wx macro is not saving.

4139. 2m FM Simplex repeater

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-11 18:14:29 UTC
From: KB3FXI
Topic: 4139 Message: 4139

Hello all,

KB8HTU in Ohio just recently put an $89 Argent simplex repeater on the air. The setup consists of a Yaesu 2m mobile rig, the Argent 2m simplex repeater (https://www.argentdata.com/catalog/product_info.php?products_id=98) and it's running to a 4 bay antenna. The site is a commercial tower at 1400 feet ground level and the antenna is at the top of the tower at 300' and is located a few miles South of West Point OH in Columbiana County.

This thing has monster coverage. Yesterday I hit it, hilltopping while mobile in Pittsburgh PA and heard a fellow in Youngstown OH!

All are welcome to give the 145.510 2m simplex repeater a shot. It's on 145.510 FM simplex, no PL tone is necessary. Just put out your call (voice or MT63 2k long is what we've been using for digital). If you make it, you'll hear your message repeated back. If you get a response, make sure you leave long pauses on the overs to give the other operator time to record their message. Message/record time is up to about 3 minutes, but if you get into a qso, it's best to keep your comments short.

The Argent simplex repeater is a really cool tool for emergency communications and works great with NBEMS digital ops. I'm going to see if I can get one up and running here in WPA. What's really fantastic is, it's only $89 and works with any transceiver by plugging in the RJ45 cable from the unit to the mic jack of any rig. And for those with big gun, high gain VHF stations, you can work long distance on these FM simplex channels without the problem that is common on repeater pairs where you wind up bringing up other repeaters inadvertently.

Also... a reminder that paNBEMS is running a simplex net on 145.530 MHz on the first Wednesday of every month at 9:30 PM ET. We take check ins from anyone, anywhere by voice and then we also play with MT63 2k long digital mode. This month was our first net and we managed to get an MT63 digital message relayed (2 hops), confirmed 100% copy, from Pittsburgh to Erie, PA.

For those not familiar with 2m FM digital ops... there is no special hardware required with operations on FM. If you have a computer that can generate audio and has a working microphone (either built in or a cheap plug in mic), you have all you need.

Get on the air with 2m FM simplex and have some fun!

I hope to see you all tomorrow morning on the 80m net at 3.5835 USB at 10am and 7.073 USB at 11am ET.

-Dave, KB3FXI

4145. Possible 2 Meter Link - Johnstown, Pa to Pittsburgh & Eastern Ohio

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-16 01:56:50 UTC
From: John L. Rogers
Topic: 4145 Message: 4145

Dave, KB3FXI

Earlier this evening I ran a test of the 110 mile 2 meter path to the new simplex repeater in Eastern Ohio. From an easily accessed high location - a parking lot at the Johnstown Galleria Shopping Mall - the test using 25 watts and a car mounted quarter wave vertical was successful. In a time of need that link will certainly work for ARES traffic from this area to Pittsburgh and west.

A few weeks ago a station in Central Pennsylvania stated that he could hit Altoona repeaters. If not already tested may I suggest a relay test utilizing the 147.15 repeater atop Blue Knob Mountain or a mobile/portable with beams and moderate power perhaps on 145.53. Before the Blue Knob Ski Slopes were developed Blue Knob was the site of an Air Force radar installation which covered the Eastern United States. Blue Knob has also been the site of a number of successful VHF/UHF contest efforts. Blue Knob should make a very effective relay site for traffic from Central Pennsylvania to the Pittsburgh area.

John, W3IW

4146. 2m Simplex Repeater was: [paNBEMS] Possible 2 Meter Link - Johnstown, Pa to Pittsburgh & Eastern Ohio

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-16 15:19:45 UTC
From: David Kleber
Topic: 4145 Message: 4146

John,

I was talking with Gary (KB8HTU) on the simplex repeater last night and he said he heard you on there chatting and describing your working conditions. We're constantly amazed at the coverage and performance of the simplex repeater there.

I think we agree that a handful of these units installed at high spots and good locations would be a minimal expense and an excellent resource for playing around and for digital emergency communications. I really like the 2m FM simplex ops for the following reasons:

- All you need is the Argent 2m repeater ($89) and an old mobile or HT transceiver, power supply or battery and battery charger
- If HF is dead, we always have VHF groundwave
- Any licensed ham can participate and have fun
- We can solicit new hams (techs) to get actively involved in emcomm while they're new to the hobby and open to trying new modes that are fun and will keep them active
- For working long distance and high gain VHF, you don't have the problems associated with regular repeaters in that you wind up bringing up other repeaters unintentionally that reside on the same common frequency pairs (i.e. there is a repeater East of my location, at some distance, on 145.850 but when I try to bring it up, I wind up activating the Beaver repeater off the back of my beam)
- It promotes the KISS principle and encourages a standard simplex monitoring frequency that would still be very useful in an emergency even if we suffered a failure of the simplex repeater
- And we exercise the underutilized VHF simplex frequencies

I am considering a few ideas for possible strategic permanent deployment locations in WPA.

Gary (KB8HTU) welcomes and encourages anyone interested to give his simplex repeater a shot... it's on 145.510 FM Simplex in Columbiana County OH. Make sure you listen for at least 2 minutes before you transmit. After you transmit, you will hear your recorded message being repeated and transmitted. Remember that you may not hear the other station recording their reply message, so leave a long pause and wait for their recording to be transmitted out. It's very different than using a traditional repeater, but you get used to it pretty quick. The system is great for short voice exchanges and really works very well with MT63 2k long interleave data transmissions.

I have been leaving my radio at home set to monitor along with FLDIGI on MT63 2k long interleave (1500 Hz center waterfall) to catch any messages going out on the system during the day when I'm away from the shack.

Have fun with this and let us know if you're able to access the repeater and what kind of signal report you get back.

4147. New HOWTO on Monitoring CAT Commands

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-16 21:15:54 UTC
From: Ian Wade G3NRW
Topic: 4147 Message: 4147

Recently, while writing Excel VBA code for tools to manage the Kenwood TS-590S, I found the need to monitor the CAT commands issued by my software to the radio, and to check the responses from the radio.

I have now documented the procedures, in "How To Monitor Kenwood TS-590S CAT Commands". Following these procedures, you can monitor the CAT traffic between well-known applications (such as HRD, Fldigi, etc) and the radio, and also generate your own CAT commands using PuTTY.

Two other very useful utilities are briefly described: USBDeview and Portmon.

Although written primarily with the TS-590S in mind, the procedures are in fact usable with almost any radio that supports CAT commands.

To download the HOWTO, go to the TS-590S Resources Page:

http://homepage.ntlworld.com/wadei/ts-590s.htm

Scroll down to the "HOWTOs" section, then click on the link:

"HOWTO monitor TS-590S CAT commands".

This is the first version of the HOWTO. If you have any feedback, or find any errors or misleading statements, please let me know.

4150. FLMSG - HF net tomorrow morning (Sunday)

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-18 15:41:20 UTC
From: KB3FXI
Topic: 4150 Message: 4150

Hello all,

For the net tomorrow, I'd like to do something different to encourage the use of FLMSG. In the course of most of our paNBEMS nets, NCS is usually the only station sending messages. I'm not sure if that's because the participants aren't familiar with how to make and send an FLMSG message or if it's because they just don't have anything to send.

During the net, rather than going for comments, I'd like to change the net format moving forward so that all comments are conducted with the use of FLMSG.

Net participants won't be required to bring message comments in order to check in, but we'd like to encourage everyone to bring comments and information to every net.

I'd like to ask that if you don't know how to send an FLMSG message, please drop me a line at kb3fxi@.... I can walk you through the steps, and, if you'd like, we can even get on the air for a test.

If you do know how to send an FLMSG message, please have one made up and ready to send during the nets. Just make up some comments in a plain/blank format FLMSG with something like your station capabilities or the local net schedules and frequencies of which you participate. Or, try formatting an ICS213 message to someone on the net.

We've been at these nets for over 3 years now and it would be nice to see a greater level of participation.

Please put out some bulletins on your local nets with an open invitation for all to join in. I'll have a basic invite message to transmit tomorrow that can be relayed on NBEMS nets or read as an announcement on phone nets.

I hope to see you all on the net tomorrow morning. Info on our net schedules at www.paNBEMS.org

4153. contest escape... 10.135

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-19 18:04:31 UTC
From: KB3FXI
Topic: 4153 Message: 4153

Hello all,

Great net this morning on 80 and 40 with a lot of FLMSG messages!

Thanks to all who stepped up to the plate and passed some information.

I guess there's a CW contest today on HF. I'll be escaping that and hanging out on 30m again today on 10.135 USB, 1500 Hz center waterfall with 8/500 olivia as my default mode but I have the RxID on if you want to jump on with a different mode.

Jump in and put out your call if you have a chance.

I'm also monitoring the 145.510 FM simplex repeater frequency today, and I'm ready to copy mt63 2k long there.

Yes OPERA is very similar to WSPR. It is now being heavily used in
Europe. Kind of an automatic station to station contact and also connected to
internet to show all contacts using OPERA. A couple of us in York Co, PA
used it for a few days. Good for show open paths around the world. You don't
do anything after you start the program and turn on your rig. To much
like an automatic station for me..

4164. Update to TS-590S Digital HOWTO

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-21 17:08:08 UTC
From: Ian Wade G3NRW
Topic: 4164 Message: 4164

I have just updated my TS-590S Digital HOWTO.

New material includes a 4-page "Nutshell" section explaining the basic principles of AFSK, VOX and PTT operation in the radio.

To download the HOWTO, go to the TS-590S Resources Page:

http://homepage.ntlworld.com/wadei/ts-590s.htm

Scroll down to the "HOWTOs" section, then click on the link:

"HOWTO set up the Kenwood TS-590S for Digital Data and Digital Voice Operation"

Subj: EMI exercise with FLDIGI

On February 14 & 15, 2012, .Amateur Radio operators from Adams and York County, Pa. were invited to participate in an emergency management exercise held at the FEMA Emergency Management Institute (EMI) at the FEMA facility in Emmitsburg, MD. We used voice and digtal (FLDIGI/FLMSG).

Attached is a review of our participation in the exercise.

4169. RE: [paNBEMS] Fwd: EMI exercise with FLDIGI

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-23 20:33:47 UTC
From: Brian M. Koenig
Topic: 4165 Message: 4169

The course was the community-specific integrated emergency management course. This course is initiated by the local AHJ as a request through the EMI. EMI then sends staff to the community to research and observe how the jurisdiction currently operates. The course is then tailored to the specific needs of that community and the improvements they need to make. One of the focus points of the course is the full EOC activation with injects created to utilize all the ESF's and to help drive the changes that are needed.

The Citrus ARES folks are included in the county emergency plan, so that is how they were a part of the exercise.

From what I understand, the EMI normally talks about Amateur radio in the classes, but they wanted to try it "for real" this time to give a true example of what the capabilities are.

4170. What are the correct versions?

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-24 01:57:04 UTC
From: FRANK
Topic: 4170 Message: 4170

My Fldigi is ver 3.21.9 When I check for updates I receive the message that I have the latest version,although the download page shows 3.21.38.
When I try to install the ver on the download page it appears to install ok but won't open.
The ver that I have (3.21.9) does not have the "Text Capture" tab in the config window.
Thanks for any input on this

In general, you're best off with the latest versions. I'm running 3.21.38 and it works very well.

When you say it won't open, could you please be a bit more specific? Are you double-clicking on the downloaded installation file and it won't open, or have you installed 3.21.38 and that won't open? Version 3.21.9 is pretty old at this point.

Also, which operating system are you running?

Also, does it stay open long enough for you to go to Help->Event log?

If not, go to the fldigi.files folder in your home directory and look for a file named status_log. Perhaps you'll find a message there that will put you on the right track.

The operating system is XP SP3. I uninstalled the the version I had and reinstalled the 3.21.38 ver. Once I shut down my firewall it would start using the desktop shortcut. I don't know where the old version came from I had previously installed because I only started my involvement with Fldigi in the past couple of months. Thanks,

Fldigi uses some network connections to do some communications, such as
talking with Flmsg. Perhaps your firewall was interfering.

Dave,

I had the computer and radio monitoring the frequency and received your message 100%.

Apparently there is a RTTY contest again this weekend, 3.5835 is blocked. Have you ever considered a backup frequency on 30 meters?

From: David Kleber
Topic: 4180 Message: 4180

How in God's name does this make any sense whatsoever?

So, we're either supposed to use the very narrow psk31, or the very wide Pactor III, but nothing in between???

Could it be the ongoing conspiracy theory that the ARRL is favoring PactorIII and Winlink? Someone please come up with something to restore my faith in the ARRL on this one.

More info

http://www.scs-ptc.com/shop/products/modems/pactor-iii

Either 60 Hz bw or 2400 bw?

Possibly since pactor III occupies the same bw as ssb maybe they consider the two modes compatible as far as bw is concerned even though one is digital, as one means of operating and then a very narrow mode, therefore, when you tune to one of the frequencies it will be be obvious that you will have the 2 bandwidths to choose from. If you hear psk then you know that frequency is operating psk and a lot of stations will fit in, if you hear pactor III or ssb then that channel is “full”.

Just guessing, I am going to try and find out the logic, on the surface there doesn’t appear to be any but I think that is not the case.

As always, I reserve the right to be wrong.

How in God's name does this make any sense whatsoever?

So, we're either supposed to use the very narrow psk31, or the very wide Pactor III, but nothing in between???

Could it be the ongoing conspiracy theory that the ARRL is favoring PactorIII and Winlink? Someone please come up with something to restore my faith in the ARRL on this one.

NTIA is the National Telecommunications and Information Administration.
Their website is http://www.ntia.doc.gov/ .

From their website:

The National Telecommunications and Information Administration (NTIA), located within the Department of Commerce, is the Executive Branch agency that is principally responsible by law for advising the President on telecommunications and information policy issues. NTIA's programs and policymaking focus largely on expanding broadband Internet access and adoption in America, expanding the use of spectrum by all users, and ensuring that the Internet remains an engine for continued innovation and economic growth. These goals are critical to America's competitiveness in the 21st century global economy and to addressing many of the nation's most pressing needs, such as improving education, health care, and public safety.

From: Fred VE3FAL
Topic: 4186 Message: 4186

I will be monitoring 7.073 all night. W are in the middle of our first major winter storm. Already have over a foot of snow since noon, 60 km/h guts with heavy drifting. Not supposed to end till morning...

Oh well , we need it, we need lots of snow and rain for spring or we will find ourselves in the middle of a major forest fire season again.

Cheers

It appears to me from the R&O that NTIA is willing to tolerate a small ham presence but nothing more, because they need this band for government use. If they want the channel back, they want to make sure it can be cleared for their use as fast as possible.

By the way, the bandwidth does NOT permit us to pack 2.8 kHz with PSK signals. The PSK emission must occur at the band center only. They want one ham signal per channel, regardless of the mode, so they can clear the channel quickly if they want it back. I believe that is the logic.

I believe that is also the reason the ARRL wants to use only Pactor III or PSK. The primary users will know that those emissions are ham emissions and can expect those to cease, or they know that they can use those emissions to tell us to clear the channel. If we were allowed our tower of babel of digimodes (PSK, JT65, Olivia, SSTV, Hell, etc..), it will take them longer to figure out what mode to use to tell us to shut up when they need the frequency.

We may not like it, but this is what life as a secondary user is like.

Either 60 Hz bw or 2400 bw?

Possibly since pactor III occupies the same bw as ssb maybe they consider the two modes compatible as far as bw is concerned even though one is digital, as one means of operating and then a very narrow mode, therefore, when you tune to one of the frequencies it will be be obvious that you will have the 2 bandwidths to choose from. If you hear psk then you know that frequency is operating psk and a lot of stations will fit in, if you hear pactor III or ssb then that channel is “full”.

Just guessing, I am going to try and find out the logic, on the surface there doesn’t appear to be any but I think that is not the case.

As always, I reserve the right to be wrong.

Dana,

You may very well be right. I still can't imagine the primary users switching to PactorIII and trying to initiate a contact with us to request the frequency. Do you really think that's going to happen? I doubt it. I would suspect that they would jump on the frequency and transmit right over us. When and if this ever happens, the rules are clear that it is our responsibility to stop our transmission as soon as we detected the encroaching signal.

If your theory is right, the ARRL should just come out and explain that's the reason. The fact that they didn't just leads to the kind of questions about their organization that have been raised tonight.

This answer is going somewhat rough. The NTIA is the National Telecommunications Industry Association, or something similar. They are an industry trade association. The FCC has given them responsibility for assigning frequencies and testing licensees for commercial interests. Much in the same manner as the FCC has given hams responsibility for testing other hams. I once had a First Class radio telecommunication license issued by the FCC and tested for by the FCC while I was an engineer at a string if commercial radio stations. That licensing and certification is now being handled by the NTIA. (I may have forgotten the exact name of the license I held, many years have passed since then.)

Dave and others

I thought this was settled in the original plan for secondary use of
ANY shared allocation: the primary user notifies the secondary user of
need for the frequency, probably using voice, which can be understood
by everyone (but I'm beginning to wonder about some people).

4193. Echolink Question

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-27 20:18:48 UTC
From: Fred VE3FAL
Topic: 4193 Message: 4193

Gang:

I am having trouble connecting to echolink. I am using a DLink DIR-655 router in the house. I have the UDP and ports configured for 5198-5199 and they fail.. The TCP connection is good.. Now, my old Dell D600 was able to connect this morning and firewall test showed good, my Dell 1501 fails when I do a test ..

What else am I missing in the setup, I do have my router configured so that only MAC addresses I approve can use the airwaves on that router and both are on it, I run AVAST Pro and it is allowed there and in windows firewall.

Thanks

Fred

Try turning windows firewall off, but it is a udp port problem.

4197. Digital Interface Kit

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-02-28 02:27:46 UTC
From: D Browne
Topic: 4197 Message: 4197

As part of an effort to get more people in our area interested in digital communications and NBEMS, Jim, N5IB and I designed a digital interface kit for the members of the Baton Rouge ARC. We call it the YADI (Yet Another Digital Interface). It was quite popular, and we are considering doing a second run of kits as a fundraiser for our club. With the permission of the moderators, I am posting this notice here.

It is a sound card - digital interface with the usual audio and optical isolation. It can do either serial port keying or use a VOX circuit built in the interface. The VOX circuit is a micropower design that can run on an internal 9V battery for many months, or get power externally. The PTT circuit can be configured to key HF rigs, VHF/UHF mobiles and even most handitalkies. Our idea was to have a simple interface that could be bundled with a laptop and a mobile rig or HT and used for digital emcomm.

The kit and manual were designed for a novice kit builder and include a silkscreened board, all through-hole components (no surface mount), and an enclosure. The manual describes how to build the cables out of cat-5 cable. The interface kit takes about 4 hours for an inexperienced builder to complete, based on our experience with a club building session. We figure that building the cables will involve an additional hour or so after you have dragged out your radio's manual to figure out how to connect to it.

We have made the (very extensive!) construction manual is available at www.brarc.org if you wish to look it over. You may want to browse it (all 47 pages) rather than printing it! The cost of the kit will be $40 including postage. If you might be interested, please email me offlist at

ad5vc@...

To be clear, there are no kits available now. We are just trying to gauge the interest for a second run of kits.

Thank you.

Dana,

Thanks much, below should be the site else if you go to www.brarc.org at the upper right in the search window type manual I tried several buzz words until I found one that worked after looking at all the screens and not seeing a reference to the kit.

http://brarc.org/wp-content/themes/panorama/header_images/BRARC_Digimode_Interface_22FEB2012.pdf

I’m off to browse the manual, sounds like a winner.

Thanks again Dana,

PA NBEMS Working GroupI attempted to get into the net on 3.5835 on the last 2 Sundays. Signal levels were very low, here in Nassau County, Long Island, NY. FN30fq

Since I could not copy net control or an alternate, I did not transmit. However, yesterday, after being called away from the station and returning later, I found that I had copied an IC213 message each week, although the check sums had failed.

I left the radio on Olivia 8/500. Flmsg and/or flwrap automatically captured these messages.
Was MT-63 used? If so, the mode change would have also been automatic, because I was not present.

Thanks, 73

Roland,

Thanks for the heads up.

I forgot the file was not immediately accessible on the main page -- I don't handle the webpage stuff. If you get to the main page, you will see the link to the manual as a recent blog post on the right hand side. Click on that and follow the directions to download the manual.

Yes, your link will do fine. I repeat it here for others.

I am totally baffled, I emailed my service provider TBayTel and told them about my trouble, they said they do not block ports at all. I reset my router to factory default, rest passwords and opened the ports 5198-5199 and made sure 5200 was good as well.

My D600 on first attempt failed, tried again and it PASSED, logged out, tried again, first two attempts failed third passed..

My Dell 1501 was able to log in the other day and now I cant log in at all, I opened up windows firewall and added those ports to it with no changes. I have yet to remove it from there and try gain and have it unblock it.

I am running AVAST Pro and I see know where in it that might be blocking Echolink, even when I disable it no change..

Fred,

Here is an issue I found with my router and Echolink. If you have several machines on your local network, and the router has a firewall and uses NAT (Network Address Translation), it takes your packet of data that is going to the internet and makes it look like it is coming from the router. The Echolink server then sees data that apparently originated from your router, not your machine. Incoming data from the server must be directed to the correct machine on your network, but the router does not automatically know which machine to direct it to. You have to set up "Port Forwarding" on the router and tell the router that incoming requests from outside to connect to port 5199, say, should be directed to machine X, where X is your machine. The incoming port requests on Echolink must be directed to the IP address you have assigned your computer behind the router (usually a 192.xxx.xxx.xxx or 10.xxx.xxx.xxx address)

4209. Fun Last Night

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-01 20:09:34 UTC
From: KB3FXI
Topic: 4209 Message: 4209

Hello all,

I worked some radio last night at Skyview Radio Society (www.skyviewradio.net) and had a blast.

I checked in to the Cambria County PA NBEMS net on their 145.210 repeater. They have a lot of new folks and the net is only been active for a few months from what I can gather. But they're already doing FLMSG ICS213 messages and doing a great job.

I sent a bunch of MT63 over the 145.310 simplex repeater, basically relaying the messages that I got from the Cambria net to my home station which was set to monitor the simplex repeater. When I got home, I had 16 messages waiting for me!

I also successfully sent out an email on Winmor/WL2K and came across "Little Bo Peep" (Larry, W3LBP), our former WPA SEC. Larry was on 30m psk31 doing some ragchew and it was quite a coincidence running into him there.

I'm looking forward to next Wednesday, the first Wednesday of the month, for the WPA NBEMS simplex net at 9:30pm ET on 145.530.

I hope to see everyone on the waterfall then and on the nets this Sunday. All our skeds are on the main page of www.paNBEMS.org

-Dave, KB3FXI

P.S. Just a quick note that the 445.450 repeater in Pittsburgh is putting out an extremely low signal. It is suspected that the power supply may have failed and the repeater is running on battery. When the repeater controller sees the switch over to battery, it goes into energy saving mode by stepping the output power way down. I think there may be a work party to swap out the power supply this weekend. We'll post updates as we get them.

4210. NBEMS ALE test?

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-02 13:31:25 UTC
From: Andrew O'Brien
Topic: 4210 Message: 4210

It may be the antitheses of NBEMS, but I am looking to do an ALE experiment. I tried to drum up interest among the NY NBEMS folks but had no takers. The standard 141 digital mode used under ALE conditions is perhaps well known for not being as effective as many of the digital modes we use when doing NBEMS. ALE on the hams bands has some infamy for unattended operations that can cause QRM. All that notwithstanding, I am interesting in testing ALE in an area that I think MIGHT be useful. I think ALE can be useful in calling up a net , useful in that it can be automated and is not dependent on an individual band or frequency. Instead of holding a net on 80M at an announced time, we could call up a net at any time on any band that is open. All without any special announcement. This may turn out to be unrealistic and unreliable but I am interested in trying it. Trying it with a local or regional group rather than a nationwide of international group.

So, what i am looking for is a group of hams in NY, PA, WV, Ohio that would be willing to try. I am open to others from neighboring states too, but mainly interested in NVIS type conditions. All I need at the moment is your callsign. I would use the callsigns to format a "net" within my ALE software. If I get a few stations , then I'll move on to the next stage of actually testing net structure and ALE performance. if you would like to try but have no ALE experience, I am more than willing to help you set up the software. The idea is to test ALE's capability for assisting NBEMS operations , the outcome could be that it is a waste of time, but could be fun trying.

4211. Pittsburgh w3yj repeater (443.450/100 Hz PL - 443450 Echolink)

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-02 22:54:40 UTC
From: David Kleber
Topic: 4211 Message: 4211

The W3YJ repeater in Pittsburgh is now back to full power.

The problem was a faulty power supply which was swapped out at about 5:45 this evening.

The repeater was running at reduced power output on battery for the last 4 days and was still showing over 12v... so, it was a good test of the battery backup.

Subject: [paNBEMS] What are the correct versions?

My Fldigi is ver 3.21.9 When I check for updates I receive the message that I have the latest version,although the download page shows 3.21.38.
When I try to install the ver on the download page it appears to install ok but won't open.
The ver that I have (3.21.9) does not have the "Text Capture" tab in the config window.
Thanks for any input on this

4217. Mapping of today's PA net

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-04 20:53:24 UTC
From: Andrew O'Brien
Topic: 4217 Message: 4217

I created a quick illustration of how easily the paNBEMS 80M net covers Pennsylvania and the east coast on 80M during daylight hours. I'm probably stating the obvious, but perhaps you can point others to the quick html example I made. The map in the right-hand frame can be zoomed to better illustrate coverage areas and "drill down" in local areas when my map has overlapping call signs. The static county map is just as an example but you can switch to county map mode in the right-hand frame and see a closer view of individual counties. Again, stating the obvious, the ease at which I copied the wrap files shows how effective NBEMS is.

http://www.obriensweb.com/panbemsex.html

Also, for those that may need the info, the geocode mapping data for today's net is

```
latitude,longitude,name,desc,color
39.312658,-77.464316,"w3fdk,-,
40.288835,-79.537317,"w3tnu",-,
41.244917,-79.49151,"aa3ye",-,
39.881047,-75.635732,"kb3pcy",-,

Topic: 4220 Message: 4220

Hello All;
Great net on Sunday evening at 8:00pm

I have installed the latest version of FLDIGI.
I noticed something tonight and have noticed it for several versions now.
When I change a macro or create a macro it will not save.
Is this an error(bug) in the sofeware.
Has anyone else noticed it?

I do a save config and also a save macro and it still will not save.

Thanks Ken
I set the Config/UI/General as you suggested.
Upon exiting the FLDIGI program it will ask to save.
Click yes and it works. A manual save will not work but this auto save does.
Thanks for the tip.

4225. FT-817 on FM with FLDIGI

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-06 04:39:14 UTC
From: Fred VE3FAL
Topic: 4225 Message: 4225

Gang:

Trying to play around tonight with FLDIGI on FM using my FT-817, Dell Inspiron 1501 and the latest FLDIGI software..rotating between a Signalink USB and SL-1..

When in FM mode the rig will key up but will not send out any of the digital tones. I go to DIG mode and I hear tones from the unit, we are playing on 2 meters on 145.050..If I use my FT-857 with either Signalink it will key up and it will send the tones by the mode of choice. One thing Lori VE3VAI and myself have noticed is that the RSID is not picked up at all in FM mode..We are doing a demonstration on Thursday and wanted to play around a bit before we got there.

The group meets every Tuesday evening for a digital roundtable but the mode and frequency is already set so no one needs to rely on the RSID, has anyone else noticed this issue on FM or 2/440?

Still baffled why the 817 will not key up on FM mode...I am using the mini din, maybe I need the cable to the microphone instead the RJ45..

Not sure and baffled in Ontario..

Fred

I have the FT-817 and w3yj does, too.

On FM with the 6 pin din connection, you need to put the rig in Packet mode. But I don' t think that explains your PTT situation.

Maybe some others will come up with a fix for you. The only thing I can suggest is to check the wiring of the jumpers in the USB Signalink and to also make sure your master and wav volume on the internal sound card of your computer are up high enough to trigger the vox ptt of the USB Signalink.

BINGO Dave you are correct, I forgot about putting the FT817 in PACKET mode, it now transmits on the digi modes with the SL-1, it should do the same with the USB….

Thanks

Fred

I know not about the rig in question, but my experience might be helpful. With my TS480sat I am using the digital vox, Found out to my surprise that the vox delay used for voice communications worked on the data port also, and the data port uses digital vox to activate the ptt line.

----- Digital NBEMS Net Listings -----

Note: All frequencies listed are USB and are dial frequencies

1) SATERN NBEMS Net Schedule
Monday and Wednesday
8PM ET- 14.065
9PM ET- 7.065
10PM ET- 3.5835
1500Hz waterfall center-Olivia 8/500

2) Southern Territory SATERN Net
Saturday
12PM CT- 14.065
1000Hz waterfall center-Olivia 8/500

3) New York NBEMS Net
Saturday
10AM ET- 7.036
1000Hz waterfall center-Olivia 8/500

4) Pennsylvania PaNBEMS Directed Net
Sunday
10AM ET- 3.5853
11AM ET- 7.073
1000Hz waterfall center-Olivia 8/500
Bulletins will also be sent using MT63-1K long (64 bit)

5) CaNBEMS Net
Sunday

8PM PT- 3.585
Dial Frequencies of:
3.584 kHz with an audio offset of 1000 Hz
3.583.5 kHz with an audio offset of 1500 Hz
3.583 kHz with an audio offset of 2000 Hz
3.583.371 kHz with an audio offset of 1.629 Hz
Initial tuning and contact with net control is made using Thor11 and then adjusted upward or downward to accomodate conditions

End of bulletin

4232. Mode vs. Bands and Conditions

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-08 03:55:18 UTC
From: Fred VE3FAL
Topic: 4232 Message: 4232

Gang:

I was think of starting a poll to see what modes on what band make the most logical sense under various condition when it comes to accuracy and speed in an EMCOMM situation.

I however decided that I would just ask the groups.

I ask this question because I was asked in a SATERN Conference call if I could come up with a list to show this as a primer for those just getting started.

I know a bunch of us have done some extensive testing and the testing is far from over.

So, if on 2 meters or 440, what mode to get the most reliable and fastest messages through..

Same with HF???????

Also what modes will and will not bring up flmsg?

I was playing with RTTY from one radio to another radio in the room and RTTY messages sent via FLMSG would not open..so what modes will and will not bring up wrapped messages???

Just some food for thought..

Thanks for all your input gang.

4233. Solar Storm

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-08 15:05:48 UTC
From: David Kleber
Topic: 4233 Message: 4233

Charge up your batteries in the event we have any power grid failures...

NASA models using data from the Solar Terrestrial Relations Observatory (STEREO) and the Solar Heliospheric Observatory(SOHO) have now provided more information about the two Coronal Mass Ejections (CME) associated with the two March 6 flares.

Such a CME could result in a severe geomagnetic storm, causing aurora at low latitudes, with possible disruption to:- high frequency radio communication, global positioning systems (GPS) and power grids.

The CME is not squarely-earth directed but will be direct enough to offer a glancing blow to Earth on Thursday, March 8

- The CME will yield a a G3 or "strong" geomagnetic storm.

- Its radio emissions can disrupt global positioning systems to make them less accurate.

- The effects of this G3 storm are set to arrive very early Thursday morning. (Update: The effects arrived at 5:45am ET Thursday, March 8)

- Meanwhile, a solar radiation storm is still in progress and levels are at S3 (strong).

- Communication problems and radiation from the storm will probably force airplanes to avoid flying over the north and south poles.

There is near certainty that this solar storm will produce aurora across the northern latitudes and could produce them as far south as the mid-latitudes. You can expect auroras to appear on March 8 and March 9.

This solar storm event may last 3 days.

As many of you know, I'm a member of the Skyview Radio Society here in WPA. We have a great club and nice group of active members.

Several weeks ago we had a reporter visit. I was in the interview and a separate pictures of me and Geoffrey Wolfe (AB3LS) appear on the front page of one of the little local newspapers.

The shot of me was when I was showing the reporter NBEMS and watching the data coming in from the KB8HTU simplex repeater!

Subject: [paNBEMS] Mapping of today's PA net

I created a quick illustration of how easily the paNBEMS 80M net covers Pennsylvania and the east coast on 80M during daylight hours. I'm probably stating the obvious, but perhaps you can point others to the quick html example I made. The map in the right-hand frame can be zoomed to better illustrate coverage areas and "drill down" in local areas when my map has overlapping call signs. The static county map is just as an example but you can switch to county map mode in the right-hand frame and see a closer view of individual counties. Again, stating the obvious, the ease at which I copied the wrap files shows how effective NBEMS is.

http://www.obriensweb.com/panbemsex.html

Also, for those that may need the info, the geocode mapping data for today's net is

latitude,longitude,name,desc,color

4238. Saturday 60M Quick NBEMS Net

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-07 14:11:45 UTC
From: Andrew O'Brien
Topic: 4238 Message: 4238

OK, I'm game for the experiment. For the next few weeks (to see if there is enough interest) I will run a 60M net designed as a mix of SSB-Phone and digital traffic via PSK-31 using Wrap files. The "quick" aspect of the net is that we will use voice most of the time interspersed with bulletins in PSK31. The net is designed to last 10 minutes only. It will use procedures similar to what you would expect on a ARES net. It will operate in support of the emcomm concepts envisaged for this band as espoused by the ARRL. If traffic is heavy, NCS may move stations to different channels (or bands). If traffic is detail oriented and urgent , NCS may move stations to other bands that support different digital protocols such as MT63. If primary users of this band suddenly occupy the net channel, NCS may suspend net or move the net. The time for this net is 9.45 AM Eastern Time , 14:45 UTC. over by 14:55 UTC. The frequency is..... here's the test... whatever 60M channel is free when NCS calls the net. I do not want to commit to a specific channel. So, in good emcomm tradition, you will have to look for the NCS on one of several possible frequencies. Net may start late if all five channels are "busy". PSK will be at 1500 Hz in the waterfall, regardless of channel. Since the net is a Saturday morning when we may have other things to do in our lives, I am looking for people interested in being alternate NCS. Please email if interested in being an NCS.

It true emcomm style, the extra challenge to this net will be the fact that my 60M antenna is now lying on the ground following several high wind storms in the past week. I will try to fashion something that will work during the daylight hours before the net tomorrow. Should be interesting.

Good deal, Denny.

I listen there myself when I'm in the shack and have NBEMS set there to catch any MT63 2k long that might be sent along,too.

Maybe I'll catch some digital messages from you or maybe even get you live while I'm in the shack.

Subject: [paNBEMS] 2m FM Simplex repeater

Hello all,

KB8HTU in Ohio just recently put an $89 Argent simplex repeater on the air. The setup consists of a Yaesu 2m mobile rig, the Argent 2m simplex repeater (https://www.argentdata.com/catalog/product_info.php?products_id=98) and it's running to a 4 bay antenna. The site is a commercial tower at 1400 feet ground level and the antenna is at the top of the tower at 300' and is located a few miles South of West Point OH in Columbiana County.

This thing has monster coverage. Yesterday I hit it, hilltopping while mobile in Pittsburgh PA and heard a fellow in Youngstown OH!

All are welcome to give the 145.510 2m simplex repeater a shot. It's on 145.510 FM simplex, no PL tone is necessary. Just put out your call (voice or MT63 2k long is what we've been using for digital). If you make it, you'll hear your message repeated back. If you get a response, make sure you leave long pauses on the overs to give the other operator time to record their message. Message/record time is up to about 3 minutes, but if you get

into a qso, it's best to keep your comments short.

The Argent simplex repeater is a really cool tool for emergency communications and works great with NBEMS digital ops. I'm going to see if I can get one up and running here in WPA. What's really fantastic is, it's only $89 and works with any transceiver by plugging in the RJ45 cable from the unit to the mic jack of any rig. And for those with big gun, high gain VHF stations, you can work long distance on these FM simplex channels without the problem that is common on repeater pairs where you wind up bringing up other repeaters inadvertently.

Also... a reminder that paNBEMS is running a simplex net on 145.530 MHz on the first Wednesday of every month at 9:30 PM ET. We take check ins from anyone, anywhere by voice and then we also play with MT63 2k long digital mode. This month was our first net and we managed to get an MT63 digital message relayed (2 hops), confirmed 100% copy, from Pittsburgh to Erie, PA.

For those not familiar with 2m FM digital ops... there is no special hardware required with operations on FM. If you have a computer that can generate audio and has a working microphone (either built in or a cheap plug in mic), you have all you need.

Get on the air with 2m FM simplex and have some fun!

I hope to see you all tomorrow morning on the 80m net at 3.5835 USB at 10am and 7.073 USB at 11am ET.

4244. CCAR 2M FM / HF NBEMS Tests

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-10 18:41:24 UTC
From: Joe Vilardo
Topic: 4244 Message: 4244

The Chester County ARES RACES group held our monthly Tech Rally today 3/10/12 which was devoted to field trials of NBEMS on FM Simplex and HF using FLDIGI. We had about 15 stations participate in the FM simplex part of the exercise and 5 stations in the HF part.

We have a group of a about 12-18 radio operators that are quite proficient with FLDIGI using it for digital messaging over our county wide linked repeater system and we have had excellent success using NBEMS for several full scale drills. Today's exercise was to try to operate NBEMS without using our county wide FM repeater system and attempt to pass messages using 2 meter simplex. We had good success with many of the stations but had moderate success, as you would expect, with stations that we at fringe locations with marginal signals. Relaying messages to the fringe stations through those that could hear or see the NCS and the fringe station worked well. The ability of FLMSG to relay messages came into play and made it very easy to re-transmit a received message. This feature alone makes it possible to set-up a FM simplex net where ALL stations cannot hear the NCS yet be capable of getting traffic through to ALL stations. Some of the stations, including the NCS, set up their activities from field locations using portable equipment and power while others used home based stations. The real challenge is in setting up a portable field station on the fly and we experienced some issues with equipment glitches and RFI problems. Getting set up in the field to expose the problems is a must for any group that expects to provide emergency messaging during real events and drills. Having the equipment needed and a plan to set it up, isn't enough by a long shot, one needs to live the experience of doing it to to find and eliminate the unexpected.

The HF part of today's Tech Rally was an opportunity to test our wings on short haul messaging using a combination of NVIS portable antennas and some home based HF stations with more permanent antennas. The short ground wave propagation out 15-20 miles worked fine using Olivia 8/500. Local signals were not real robust but copy able. Dave KB3FXI in Pittsburgh was able to copy most of the stations that participated in the HF part of the exercise. We successfully received a FLMSG in ICS213 using MT63/100 from KB3FXI that was relayed to him from KB8HTU in Ohio. We have two more tests scheduled for local HF propagation, one will be to establish a 60-80 mile path between two stations using NVIS antennas for 40 & 80 and the second will be to use 10 meter SSB FM ground wave propagation over a path of about 45 miles. We are hoping that 10 meter ground wave will work as an alternative to using our FM repeater throughout the county if the system should fail or not be available.

CCAR will post details of what we learned today after we collect all the data from today's exercise and we will keep the group posted on our results of the NVIS tests as well as the 10 meter local ground wave test latter this year.

Joe,

I’m glad the exercise went well and it was nice to see us succeed at some large message transfers.

Please let us know when you have more exercises planned. I’m sure you’ll have no problem getting some volunteers to stand by and monitor for traffic and relays.

4246. 60M experiment tonight

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-10 22:19:42 UTC
From: Andrew O'Brien
Topic: 4246 Message: 4246

I tried an experiment earlier today but the selected time did not appear to be good for the band. I was mostly interested in daylight testing of 60M. However, just for the heck of it.. I will do a simlar test at 0245 UTC (UTC Sunday). The test is to see how PSK31 used in a NBEMS method does as part of a net , and how this can be aided by the ability to do Phone and Digital on same channel. The net will last only 10 minutes (part of my theory that nets for digital modes often take too long). The test net tonight will be called up in PHONE mode. Traffic will be sent as WRAP files using PSK31 according to ARRL guidelines. The net will NOT assign a designated frequency, it will be called up on any of the five channels that is free. If none are free, it will start when a channel is free. Net will be suspended if a primary user of the band appears near the channel. The net will also test the feasibility of using 60M to pass brief traffic to other regional nets . Traffic is formatted using standard NTS methods, this permits short messages that suit 60M requirements. The net tonight already holds traffic for N2NVZ on Long Island, NY and one QST to PA-NBEMS members. We'll see if anyone pick these up for relay.

Joe, thanks for the report and I'm glad that Dave was able to help you.

I think your NBEMS efforts with CCAR in this activity and some of your previous drills would make a great QST article. This would give your group some visibility and give other ARES and RACES groups around the country some ideas. Plus, ARRL will pay you a few bucks for your efforts that allow you to buy your team a couple cases of beer for the next after-action session.

Nice job running the net Andy!

It's pretty funny that we already have people complaining about the use of the frequency. In my opinion, 10 minutes of time using the frequency is hardly asking for much. It will be interesting to see if we get the same gripes on any of the other four frequencies. If we are not interfering with anybody (of which to my knowledge we were not), we are able to use the bandwidth. Leaving a frequency open to 'listen for DX' doesn't sound like a valid reason for us to move since that channel was not in use at that time.

It will take some time to figure out how things are going to work here.

You did a great job though. Quick and to the point is the medicine the doctor prescribed for 60m.

Subject: [paNBEMS] 2m FM Simplex repeater

Hello all,

KB8HTU in Ohio just recently put an $89 Argent simplex repeater on the air. The setup consists of a Yaesu 2m mobile rig, the Argent 2m simplex repeater (https://www.argentdata.com/catalog/product_info.php?products_id=98) and it's running to a 4 bay antenna. The site is a commercial tower at 1400 feet ground level and the antenna is at the top of the tower at 300' and is located a few miles South of West Point OH in Columbiana County.

This thing has monster coverage. Yesterday I hit it, hilltopping while mobile in Pittsburgh PA and heard a fellow in Youngstown OH!

All are welcome to give the 145.510 2m simplex repeater a shot. It's on 145.510 FM simplex, no PL tone is necessary. Just put out your call (voice or MT63 2k long is what we've been using for digital). If you make it, you'll hear your message repeated back. If you get a response, make sure you leave long pauses on the overs to give the other operator time to record their message. Message/record time is up to about 3 minutes, but if you get into a qso, it's best to keep your comments short.

The Argent simplex repeater is a really cool tool for emergency communications and works great with NBEMS digital ops. I'm going to see if I can get one up and running here in WPA. What's really fantastic is, it's only $89 and works with any transceiver by plugging in the RJ45 cable from the unit to the mic jack of any rig. And for those with big gun, high gain VHF stations, you can work long distance on these FM simplex channels without the problem that is common on repeater pairs where you wind up bringing up other repeaters inadvertently.

Also... a reminder that paNBEMS is running a simplex net on 145.530 MHz on the first Wednesday of every month at 9:30 PM ET. We take check ins from anyone, anywhere by voice and then we also play with MT63 2k long digital mode. This month was our first net and we managed to get an MT63 digital message relayed (2 hops), confirmed 100% copy, from Pittsburgh to Erie, PA.

For those not familiar with 2m FM digital ops... there is no special hardware required with operations on FM. If you have a computer that can generate audio and has a working microphone (either built in or a cheap plug in mic), you have all you need.

Get on the air with 2m FM simplex and have some fun!

I hope to see you all tomorrow morning on the 80m net at 3.5835 USB at 10am and 7.073 USB at 11am ET.

-Dave, KB3FXI

No check-ins and seemingly a dead band. Several signals at 8.45 Eastern
but perhaps this band quickly collapses in the mornings. May have to
adjust my times. Perhaps earlier. However, just for the heck of it... I
will try again tonight at 9.45 PM, 0245 UTC.

Daylight brought a quick fix to my antenna. So low it may be a super NVIS ! But I have a match on 60M, so am all set for the net today at 9.45 AM eastern. Remember this net will be held on the first 60M channel I find free, so you will have to look for me. I will also send at least on message via PSK31. I'm also interested in sending a message targeted for the NY NBEMS net that starts at 10 AM (eastern) on 40M.

4255. Best Audio Interface Device for NBEMS?

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-11 23:34:51 UTC
From: elancki
Topic: 4255 Message: 4255

I am looking for advice regarding the best audio interface device to use with FLDigi for NBEMS messaging. I work for a large corporation, which has facilities in several states. There is interest among amateur radio operators in our corporation, to establish an Emergency Communication Amateur Radio Network (ECARN), that can pass messages between corporate sites, and also to the neighboring communities.

We are working to equip a radio room at each facility, and an operating plan that incorporates NBEMS. We are new to NBEMS, and would like to benefit from the experience of those who have been pioneering the NBEMS effort.

I have heard that there are shortcomings with some commercially made sound interfaces, such as the SignaLink USB. As I understand, some messaging modes require the use of "fast ARQ", and that the SignaLink is not readily usable for these modes.

I know that many in the NBEMS community recommend acoustic coupling, but our situation is such that we will be working from a fixed station rather than "go packs". Furthermore we may be handling larger volumes of traffic, so a more turnkey setup would be preferable.

Thank you for your help,
Ed

SignaLink USB works great...you won't have any problems with it.
Fldigi/Flwrap/Flmsg do not use "fast ARQ" so this is a non-issue. My
other favorite interface is the RIGblaster plug & play, but it's more
difficult to make it work with Fldigi, and it does not have those
convenient volume controls on the front like the SignaLink.

My only concern, which others have echoed, is to be sure your network does
not run afoul of Section 97 which prohibits internal communications for
your business. In other words, you're not allowed to use amateur radio for
business continuity communications. I'm no lawyer, and unlike many hams,
I do not claim to be an expert in communications law. You might want to
run your amateur radio network and it's intended use past ARRL for an
opinion that will mean something.

4258. MemSet590 updated with new U.S. 60m channels

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-12 01:20:25 UTC
From: Ian Wade G3NRW
Topic: 4258 Message: 4258

MemSet590 is an Excel program that lets you automatically set up the memories in the Kenwood TS-590S. Once you have defined the memory settings in the spreadsheet, you can then click on the Upload button to transfer these settings to the radio. In the opposite direction, you can click on the Download button, to transfer all the radio's memory settings to the spreadsheet.

MemSet590 has now been updated with the five new U.S. 60m channels, following ARRL's Recommended Practices for 60m. Otherwise the program is unchanged from the previous version.

To install MemSet590:
~~~~~~
1. Create a dedicated folder on your PC -- for example, C:\MemSet590.

2. Go to the TS-590S Resources Page:

http://homepage.ntlworld.com/wadei/ts-590s.htm

3. Scroll down to the "MEMSET590" section, then click on the links to download the program and documentation files.
~~~~~~

I agree with Harry that the SignaLink USB is about the best soundcard interface available. Most of the problems you hear about are because people are connecting such a wide variety of radios, computers, and operating systems. 64 bit operating systems can be problematic. Once you have the operating system recognizing it and software audio levels to max, usually you have full control of levels from the front panel. I recommend also using an isolation transformer for the receive audio between radio and the SignaLink. Kensington and others make them for hooking mp3 players to home or car audio systems which have 1/8 inch stereo plugs. The transformer can sometimes save you a bunch of grief. I have been using the SignaLink with AGW Packet Engine software to do 1200 baud packet with the TX delay set to minimum. It has adequate T/R turnaround for that. From what I've seen most of the guys using NBEMS are not bothering with ARQ modes now even if the software is capable. It is much more practical to find a FEC mode that gets through, and then use flwrap to send a file and check for errors.

You can interface any voice radio, so if you wanted to handle traffic over a commercial band system it is physically possible. Again check with the FCC for what emission types are permissible on the frequency. As far as linking between fixed stations in a region or across the country, HF is the way to go, provided that there is some suitable frequency allocated for fixed RTTY modes and your company has the necessary license and equipment. Keep in mind there may be commercial radio data systems available for a price that are indeed turnkey.

Fldigi/NBEMS and voice radios have bandwidth limitations and practical limits on the number of channels you can use per band, so if you want to handle a larger volume of traffic or larger file sizes over wireless you may want to consider HSSM<http://en.wikipedia.org/wiki/High-speed_multimedia_radio>microwave systems for your local network.

On amateur frequencies generally the longer the distance you have to go, the less bandwidth is available, so your mode choice will be towards slower baud rates and limited file size. Hope this helps.

From: Fred VE3FAL
Topic: 4260 Message: 4260

Man the traffic is heavy near 3583.5 . The signal is sitting at 1000hz..

It stopped for a bit, I called cq once and the traffic has not stopped in 15 minutes, I think I will avoid 80 meters and leave the rig on 7.073 all the time as my main NBEMS station..

We had a great presentation at our LARC meeting last Thursday night, set up 5 stations in the classroom on 2 meters and went through the various modes and how they work and explained FLDIGI as well as WINLINK and what they offer.

Checked into the USEast NBEMS net this evening as well on 40 meters...

OK have a great night folks and talk later...14C in Thunder bay today and temps near 23C for the weekend...

Dave I have a quick question. How did you do mt-63 on two hops? I'm very curious as I'm setting up a simplex repeater system in Los Angeles for emergency work. I love monitoring your ideas from paNBEMS. Keep the good ideas flowing. I did manage to hear your net when I was in hearndon Virginia. I was able to copy the digital modes by decoding them on my mobile phone. I was happy to hear your net function very well and want to congratulate the whole group on wonderful work. Good job!!!

SATERN/NBEMS/DIGITAL NET LISTINGS

Note: All frequencies listed are USB and are dial frequencies

1) SATERN NBEMS Net Schedule
Monday and Wednesday
8PM ET- 14.065
9PM ET- 7.065
10PM ET- 3.5835
1500Hz waterfall center-Olivia 8/500

2) Southern Territory SATERN Net
Saturday
12PM CT- 14.065
1000Hz waterfall center-Olivia 8/500

3) New York NBEMS Net
Saturday
10AM ET- 7.036
1000Hz waterfall center-Olivia 8/500

4) Pennsylvania PaNBEMS Directed Net
Sunday
10AM ET- 3.5853
11AM ET- 7.073
1000Hz waterfall center-Olivia 8/500
Bulletins will also be sent using MT63-1K long (64 bit)

5) CaNBEMS Net
Sunday
8PM PT- 3.585
Dial Frequencies of:
3.584 kHz with an audio offset of 1000 Hz
3.583.5 kHz with an audio offset of 1500 Hz
3.583 kHz with an audio offset of 2000 Hz
3.583.371 kHz with an audio offset of 1.629 Hz
Initial tuning and contact with net control is made
using Thor11 and then adjusted upward or downward to
accommodate conditions

6) US EASTERN NBEMS Wednesday Evening Net
7:00 pm - 8:00 pm
Dial Frequencies of:

7.036 Mhz USB / Waterfall Spot 1 Khz at 7PM EST/EDT

Start with Olivia 8/500 mode. Keep your RSID turned on for any mode changes.
Recommended software download of FLdigi package from http://www.w1hkj.com

End of bulletin
VE3FAL-Fred

All updates and additions are more then welcome...

I am sure there are others but those are the only ones that I have been given and participate in with the most activity. They are NBEMS nets, SATERN or otherwise who operate digital NBEMS modes.

Sorry, I'm confused... is this a list of SATERN Nets or SATERN and/or SATERN/NBEMS Nets? I see NY and PA NBEMS nets listed, the east coast one too...but is that it???? No other provinces/states with NBEMS nets ?

4266. Re: [paNBEMS] 3583.5 occupied by WINMOR

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-15 18:32:16 UTC
From: David Kleber
Topic: 4260 Message: 4266

Fred,

Over the last few weeks, I was able to get the call signs of several of the ops on 3.5835, 1000 Hz center running Winmor.

A little research lead me to http://taprn.com/.

They have recently begun running Winmor Peer to Peer nets. I have not seen any deliberate interference, but they've been quite active on 3.5835 in the evenings.

I got in touch with one of the fellows with the group by email. I explained that we're making no false claims on owning the spot on 80m but that the spot is a pretty commonly recognized Olivia segment and one where NBEMS nets have been conducted for several years now. I asked if they would be so kind as to move up to around 3.585.

He has already changed the website frequency to 3.585 (winmor runs at 1500 center so I guess the actual frequency would be 3.5865) on their website but I'm guessing the word hasn't gotten out to all the folks in their group yet.

I also passed along an invitation for them to check in on our nets and encouraged the idea of us running liaison's between the nets.

Man the traffic is heavy near 3583.5 . The signal is sitting at 1000hz..
It stopped for a bit, I called cq once and the traffic has not stopped in 15 minutes, I think I will avoid 80 meters and leave the rig on 7.073 all the time as my main NBEMS station….

We had a great presentation at our LARC meeting last Thursday night, set up 5 stations in the classroom on 2 meters and went through the various modes and how they work and explained FLDIGI as well as WINLINK and what they offer.

Checked into the USEast NBEMS net this evening as well on 40 meters…..

OK have a great night folks and talk later…..14C in Thunder bay today and temps near 23C for the weekend…..

Many in that group are new to the digital modes and I am aware that they became aware (probably through Dave) that there were established NBEMS nets on that frequency. I'm seeing the Winmor P2P picking up on the new frequency and at least one member of that group has been participating occasionally in our Midcoast NBEMS net.

Thanks for the update, Steve.

I was never going to press the issue because they were doing nothing wrong. And they could have told me to go pound salt. But my contact with TAPRN was very nice.

We may wind up with some new friends on the paNBEMS nets and I'm looking into trying to check in on their nets as a liaison from paNBEMS.

This is the way things should always work on our very unique spectrum. As they said on their site, there is the idea of being a good neighbor.

-Dave, KB3FXI

From the TAPERN website:

http://taprn.com/

WINMOR Wiggle (Slight Freq Change)
Hey Everyone,
We all know that nobody ‘owns’ a frequency in Ham radio, but there is also the idea of being a good neighbor. As it happens, some fellow emergency communications people from a few surrounding states have been operating on 3583 for a few years now. After getting together and talking a bit it’s clear that it would be much easier for TAPRN to shift the WINMOR operations frequency up to 3585USB dial frequency. With all the room available for narrow digital signals, there is no reason for us to knowingly be on top of an established net – ESPECIALLY since these are emcomm people and just the sort who would be good to develop lasting contact with.
3585 3585 3585 – ‘see’ you on the radio…

Hi Dave

Thanks for hanging around on 3.5835 and 7.065 today while CCAR Chester County NBEMS operators did some NVIS testing.

We are preparing for a State wide medical drill titled “APRIL SHOWERS” April 20-22. We were asked to provide communications for 4 EMS strike teams from Chester County that will be playing in the Eastern PA part of the drill. There will be similar exercises going on in Central PA and also in Western PA on the same days. Our communications will consists of an operations center in West Chester, 4 mobile operators riding in the ambulances and supporting vehicle to vehicle voice communications and APRS tracking from deployment in Chester County to a forward assembly area in Lehigh county. The APRS tracking will be available for view by Chester County Department of Emergency Services while the teams are in-route to the assembly area. When the ambulances leave the county they rapidly lose their infrastructure that supports communications on 800 MHZ. Our deployed radio operators riding in the ambulances will provide communications links for vehicle to vehicle communications and also communications back to the CCAR operations center in West Chester. Our linked repeater system on 440 will support voice communications to the assembly area.

Once we arrive at the assembly area we will set up a tactical communications center to support communications to dispatched ambulances, again our operators will ride with the 4 striker teams from Chester County providing communications back to the tactical operations center when they are deployed to calls for the drill.

We will be using NBEMS and NVIS propagation on HF to pass health and welfare traffic from the tactical operations center back to our operations center in West Chester. We tested a portable antenna configuration for NVIS today from a field location near where the forward assembly area is to be located. The antennas were back to back hamsticks for 40 and 80 mounted on a tripod (aluminum speaker stands very in-expensive). That arrangement gives us a low dipole configuration for NVIS propagation. It was interesting that we had copy good enough over the 60 or 80 mile path between West Chester and the Allentown area to establish an Olivia 8/500 connection on 3.5835. It wasn’t perfect but it worked until 80 meters propagation went away about 10:30 AM. I am sure that instead of getting reflection from the ionosphere we faced absorption of the signal as the sun got higher. We switched over to 40 and that worked well for a short time until our guys ran into some RFI issues. We are going to try and improve the antennas for the tactical ops center and use a full length 80 meter and 40 meter ½ wave dipole low to the ground for the drill. The hamsticks set up quickly but they are not very efficient radiators and we will do better with full length dipoles close to the ground. HY-Q has a very slick setup using their large coil design antennas for NVIS but it is way too pricey for us. The large diameter coils make a much more efficient radiator.

We will have some other options to get NBEMS traffic back but we are going to push hard at making the HF NVIS work for us during this exercise and our guys are up for the challenge.

Thanks for continuing to support the NBEMS activity on HF. If the paNBEMS group wasn’t around I know we would not have thought of using this technology on HF for the drill.

Thanks

Joe Vilardo

Subject: [NBEMSham] [ka1vgm@...: NH-ARES Academy]

I gave an NBEMS Basic class at the 2nd Annual New Hampshire ARES
Academy yesterday in Concord, NH.

I just wanted to let you know about a comment that was made during
the presentation.

One person that was using the software said that they give the served
agency a copy of flmsg to use.

How did I miss that - so simple, and so elegant.

Give your served agency the flmsg software. Teach them how to use it and
not only does it make their life easier by being able to fill out the
messages electronically. They can then save it, print it, view it on the
screen and email it as an attachment that anyone can view.

And the big bonus here is that if you need to help them in an emergency
by sending it electronically, just have them share the folder that they
save the messages to that they want sent out. Now you can point your
copy of flmsg to that shared directory and send away!!

Another option is just to have them put them on a usb drive and hand it
to you. Think about the time saved there as well as the solution you are
giving them for free and teaching them how to use.

Oh, before you do this I would recommend you hold out for the new
release of flmsg. Rumor has it that it is a much cleaner GUI.

4284. FW digitalradio yahoo group): Imaginary restrictions on 60 meter digital mod

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-19 13:46:18 UTC
From: KB3FXI
Topic: 4284 Message: 4284

Hi friends,

Perhaps it is about time to put an end to all of the speculation and guessing about which modes can be used and which modes should be used on the 60 meter amateur allocation.

Using nXnnJ2D emissions on 60 meters. It's perfectly okay to use a digital mode which uses less than the 2.8 kHz bandwidth specified by the emission designator 2K80J2D cited in 47 CFR Â§ 97.307(f)(14):
(i) A station may transmit only phone, RTTY, data, and CW emissions using the emission designators and any additional restrictions that are specified in the table below (except that the use of a narrower necessary bandwidth is permitted):

So if WINMOR is an nXnnJ2D emission, and if the occupied bandwidth is not more than 2.8 kHz, then it's perfectly legal to use it on 60 meters (subject to all other rules, of course).

Does the NTIA care what emission modes we use on 60 meters? Good question! If you want to find out the answer, what you shouldn't do is read the ARRL 60 meter FAQ. Wouldn't make more sense to ask the NTIA?

I wrote to the appropriate person at the NTIA and asked the following question:
"Has the NTIA requested or mandated that amateur operators limit digital operations on the five 5 mHz channels to only the PACTOR-III and PSK31 digital protocols? (Yes or No)"
For your convenience, I have appended below the answer I received.

Does the NTIA control or own the 60 meter ham channels? Nope! In the U.S., the NTIA issues frequency assignments to federal users, and the FCC issues frequency assignments to non-federal users. Authority is divided based on type of user, not by frequency. Of course, the two agencies work together closely to manage spectrum usage.

There are rules which give strong priority to federal users in the part of the spectrum allocated to exclusive federal use, and there rules which give strong priority to non-federal users in the part of the spectrum allocated to non-federal use. However, the band 5.060-5.450 mHz is allocated for shared federal and non-federal use in the Table of Frequency Allocations at 47 CFR Â§ 2.106. If fact, in the NPRM at Paragraph 16 the FCC noted that "As of January 22, 2009, the Commission had issued 100 call signs to 46 licensees in the Conventional Industrial/Business Pool Radio Service (IG) in the five 2.8 kHz channels at issue in this proceeding. These call signs authorize the use of the entire 5005-5450 kHz band and other frequency bands." So license grants by the FCC to non-federal users in this part of the spectrum are nothing new.

Well, would the NTIA like us to at least check with them if we have a question about how we should be using the 60 meter channels?

Another good question. In an email dated March 13 from another NTIA official -- the person who chairs the Interdepartment Radio Advisory Committee -- the following was stated:

Mr. Behar:

Thanks for your email and your questions below.

First, I need to stress that the FCC, not NTIA, regulates the amateur service. So any questions about their rules is best direct to them.

[additional content deleted]

The point is that if you want to know what's legal, check the FCC rules. If the rules are clear, then all you need to do is ensure your operations comply with the rules (but it can be helpful to also check FCC orders to see if a particular rule has been interpreted by the FCC in a case which seems to involve the kind of operation you have in mind). You don't need to check with the NTIA or the ARRL or anybody else.

So why did the ARRL write in their ARRL 60 meter FAQ that "23-Hz Minimum Shift Keying RTTY is not in technical violation of FCC rules when used on 60 meters, but it is definitely out of compliance with National Telecommunications and Information Administration (NTIA) mandates"?

I don't know! Does anybody know why the ARRL wrote this? Enquiring minds want to know!

I hope this is useful, and 73.

David A. Behar / K7DB

-Dave, KB3FXI
paNBEMS.org

----- Forwarded Message -----
Copied from the digitalradio Egroup:

Mr. Behar,
The answer to your question is no, NTIA
did not request or mandate
that amateur operators limit digital operations on the five 5 MHz channels to
only the PACTOR-III and PSK31digital protocols. Other than the power limit of 100
Watts, the only other restriction that NTIA requested was that each channel
would be considered a single spot frequency and that amateurs, no matter what
mode was in use, ensure that their carrier is centered n the assigned
frequencies.
With regards to interoperability… NTIA, in its correspondence to the
FCC, did note that most of the digital modes used by amateurs other than CW and
RTTY did not offer much possibility of federal to amateur
interoperability.
Let me know if I can be of any further
help…

Hello all,

I've been monitoring 7.073 USB, 1000 Hz center waterfall, with RSID on but mode set to 8/500 Olivia. I put out an occasional call with the WX conditions as an FLMSG message QST.

Feel free to jump on and put out an FLSMG message or two. We could also do some FLMSG relays. If you get an FLMSG message and 100% confirm, try retransmitting it out.

Make sure you properly ID at the end of each FLMSG transmission (this will require a second transmission if you're using FLMSG/Auto Send.

Fred

VE3FAL

Sure, Fred -

The HF net meets at 8 p.m. local time (Minnesota) on Thursday at 3583.5. We will at least start on Olivia 16/500.

We also have a VHF net for southeast Minnesota on the 147.255 (PL 100) repeater near Rochester using MT-63 that starts at 9 p.m. on Thursday.

Glad you could join us this evening - nice to hear from Thunder Bay. I need to get the word out to our ARES folks in Northern Minnesota - I haven't had any checkins from that end of the state yet.

All,

I copied all the wraps 100% on 80 and 40 and little qsb. I guess the cool wx and clouds made for stable propagation my direction. I had about a s-3 noise level and 80 and 40 were both about 3 s units above the noise.

Hello all,

We had a busy net this morning. 80m was marginal but good turn out. Even more folks on 40.

I count a total of 30 stations including early out check ins.

Thanks to those who brought some messages to the net. We need to share more info so please bring some news from your local area nets to paNBEMS on HF in the form of an FLMSG message. It's good practice and fun, too.

Date: 2012-03-27 22:21:25 UTC
From: KB3FXI
Topic: 4299 Message: 4299

Hello all,

The Erie PA folks are taking advantage of Severe Weather week and running an exercise on 80m tomorrow (Wed March 28) morning starting at 9am ET on 3.5835 MHz USB digital.

The primary purpose of their drill is to test communications to and from some of the OEC/EMA stations in their area.

All are welcome to check in but PLEASE follow the direction of NCS. The initial calls will be for EOC stations by location followed by calls for general check ins. PLEASE WAIT FOR YOUR CALL and keep the frequency clear for their operations.

I will be monitoring and checking in from my home station here in O'Hara Township, Allegheny County, PA.

The net will start at 9am on 3.5835 MHz USB.

4301. NTIA to make 95Mhz of ‘prime spectrum’ available to wireless carriers

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-29 06:32:00 UTC
From: Geoffrey Wolf
Topic: 4301 Message: 4301

Found this in my RSS feeds. Hoping the NTIA doesn't have a prying eye on any amateur radio bands (900MHZ, 1.2GHz, 2.3GHz), but I'm sure they do.

NTIA to make 95Mhz of ‘prime spectrum’ available to wireless carriers
Boy Genius Report

The United States Department of Commerce and National Telecommunications and Information Administration on Tuesday announced that the federal government has repurposed 95MHz of “prime spectrum” within the 1755-1850MHz band. As per President Obama’s request, the NTIA has been collaborating with the FCC in an effort to make 500MHz of spectrum available for commercial use over the next 10 years, nearly doubling the amount currently available. “Today’s report sets a path for putting prime spectrum into commercial wireless broadband use, in support of the Obama Administration’s goal to encourage investment and innovation while enhancing America’s economic competitiveness,” said NTIA Administrator Lawrence E. Strickling. The NTIA has previously recommended the reallocation of 115 MHz of spectrum, and with today’s announcement, federal agencies have contributed 40% of spectrum to the President’s goal. “Spectrum is a finite resource in growing demand, and we need to focus on new ways to maximize its use,” said Strickling. “By working with the FCC, other federal agencies, and the industry, we can make more spectrum available to fuel innovation and preserve America’s technological leadership while protecting vital government missions.” Read on for the NTIA’s press release.

Department of Commerce Takes Next Step in Unleashing Wireless Broadband Revolution
NTIA Issues Report Setting Path to Make Prime Spectrum Available

WASHINGTON – The U.S. Department of Commerce, through the National Telecommunications and Information Administration (NTIA), today announced its finding that 95 megahertz (MHz) of prime spectrum could be repurposed for wireless broadband use. Reallocation of this spectrum would represent significant progress towards achieving President Obama’s goal to nearly double the amount of commercial spectrum available this decade. The President’s initiative will spur investment, economic growth, and job creation while supporting the growing demand by consumers and businesses for wireless broadband services.

“Today’s report sets a path for putting prime spectrum into commercial wireless broadband use, in support of the Obama Administration’s goal to encourage investment and innovation while enhancing America’s economic competitiveness,” said Assistant Secretary for Communications and Information and NTIA Administrator Lawrence E. Strickling.

NTIA, working with federal agencies, evaluated the potential of the 1755–1850 MHz band to accommodate commercial wireless broadband service. This spectrum band is of great interest to the wireless industry. However, over 20 federal agencies currently hold more than 3,100 individual frequency assignments in this band to perform a host of mission-critical functions, including law enforcement surveillance, military tactical communications, air combat training, and precision-guided munitions.

While NTIA’s analysis shows it is possible to repurpose all 95 MHz of spectrum for commercial wireless broadband, there are several challenges that need to be met before

making a formal recommendation to the Federal Communications Commission (FCC).

In the past, the federal government has freed up spectrum for exclusive commercial use by clearing a spectrum band of federal users, who typically relocated to other bands. However, given the growing demand for spectrum by both industry and the federal agencies, it is increasingly difficult to find desirable spectrum that can be vacated by federal users as well as spectrum in which to relocate these federal users. Due to the scarcity of spectrum, the complexity of federal operations, and the time and cost of relocating federal users, the old approach alone is no longer feasible.

In addition, NTIA's analysis of the cost of a complete relocation raises questions as to whether the proceeds from auctioning the 1755-1850 MHz band for commercial use will exceed federal relocation costs, as required by law. Moreover, some of the federal systems in this band may require more than a decade to relocate, which could further complicate deployment of commercial services.

Accordingly, in the report issued today, NTIA proposes a new path forward for spectrum repurposing that relies on a combination of relocating federal users and sharing spectrum between federal agencies and commercial users. Spectrum sharing will be a vital component to satisfying the growing demand for spectrum, and federal and non-federal users will need to adopt innovative spectrum-sharing techniques to accommodate this demand. NTIA proposes convening discussions between industry and the relevant federal agencies under the auspices of the Commerce Spectrum Management Advisory Committee, with the goal of finding ways to work together through sharing or other means to reduce the time and expense of repurposing the 1755-1850 MHz band, while maintaining essential Federal capabilities and maximizing commercial utilization.

"Spectrum is a finite resource in growing demand, and we need to focus on new ways to maximize its use," said Strickling. "By working with the FCC, other federal agencies, and the industry, we can make more spectrum available to fuel innovation and preserve America's technological leadership while protecting vital government missions."

Today's report is in response to a June 2010 Presidential Memorandum that directed the Secretary of Commerce, working through NTIA, to collaborate with the FCC to make available an additional 500 MHz of spectrum over the next 10 years for commercial wireless broadband service. In November 2010, NTIA released a 10-year plan and timetable for meeting the President's goal. NTIA identified 2,200 MHz of spectrum for evaluation, the process for evaluating these candidate bands, and the steps necessary to make the selected spectrum available for wireless broadband. In addition, NTIA identified some nearer-term spectrum reallocation opportunities, recommending a total of 115 MHz of spectrum that could be made available for wireless broadband use within five years.

Repurposing the 95 MHz of spectrum at 1755-1850 MHz, combined with NTIA's prior recommendation to reallocate 115 MHz of spectrum, would bring federal agencies' contribution to 40 percent of the President's goal. NTIA is committed to finding ways to maximize the economic potential of this spectrum in a cost-effective manner, while maintaining essential Federal missions.

Hello all,

http://www.redcross.org/portal/site/en/menuitem.94aae335470e233f6cf911df43181aa0/?vgnextoid=1cc17852264e5310VgnVCM10000089f0870aRCRD

It would be interesting to see if the American Red Cross would be interesting in working with Amateur Radio NBEMS volunteers to help them get information to and from affected areas in the absence of telecom or commercial power.

It seems that we would be a perfect fit in their "Social Media Digital Operations Center for Humanitarian Relief" program.

Subject: Red Cross Webinar

The Red Cross is an important ARES served agency. The Red Cross serves the public in many disaster situations including on site relief, disaster assessment, evacuation and sheltering those persons displaced in an emergency. This webinar describes the Red Cross activities and the role amateur radio can play in providing vital communications support. The intention is to provide Red Cross and amateur radio operators with a basic understanding of mutual expectations and needs in the sheltering environment and stresses efficient and accurate communications using various amateur modes including NBEMS.

This is also available at the atlantic division website.

There is a webinar at Wed, Apr 4, 2012 8:00 PM - 10:00 PM EDT

To register for this webinar, please go to this link:

4306. RE: [paNBEMS] Updated List Of Nets

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-03-28 14:45:20 UTC
From: James Good
Topic: 4297 Message: 4306

Fred,

For the benefit of some (many?) that have expressed interest in both this mode and these nets, would it pe bossible to include the time zone for the originating station in this list? If the time zone information were included an operator on the West Coast of the US (or in British Colombia, Canada) could adjust the time to his/her local time. The same would hold true for those operators outside North America (Europe, Asia, North Africa, South East Asia, etc.) translating the time to their local time zulu.

Thank you,

Jim KD5VXH

Thanks for the detailed report, Jack!

I hope you reach your goal of getting enough digital operators to cover all the sites in the upcoming drill.

Maybe a note from one of the EMA leaders asking for more amateur radio ops to train in NBEMS would help you to bring in some new folks.

Please keep in info coming here to the list on your activities. We're very interested to see how things continue to progress there.

Dave:
Is there a digital traffic net in the US that handles digital stuff for NTS?
I asked our Cdn. NTS official and we have nothing here but he did say there are a few unattended Pactor and Winmor stations that operate 24/7...
Guess gotta get the ball moving here on that...With FLDIGI it makes it all so easy..

Thanks for the detailed report, Jack!

I hope you reach your goal of getting enough digital operators to cover all the sites in the upcoming drill.

Maybe a note from one of the EMA leaders asking for more amateur radio ops to train in NBEMS would help you to bring in some new folks.

Please keep in info coming here to the list on your activities. We're very interested to see how things continue to progress there.

Jack,
Thanks for the great report on the Peachbottom NGS drill.
I am part of CCAR (Chester County ARES/RACES) and was the NBEMS op at the only township in Chester County affected by the drill. This was my first experience of actual use of NBEMS in a drill situation. Myself, N3FLL and Ray, N3ESS (voice op) received about 15 ICS213 msgs using the W3EOC 440 repeater system. We followed a similar system of announcing a msg ready for sending and then acknowledging receipt. Your word doc has many good points on logging and keeping track of msgs that I will suggest for future events. If you need ops for a future event I'd be glad of assist.
73,
Frank N3FLL

Hello all,

Folks are welcome to jump on the simplex schedule tonight but I will not be able to pick up NCS duties as I am registerred for the Red Cross webinar tonight.

I should be at Skyview next week to run the 145.530 9:30pm ET simplex net.

-Dave, KB3FXI

BTW, I don't think it's too late to register for the Red Cross Webinar. Here's the info:

The Red Cross is an important ARES served agency. The Red Cross serves the public in many disaster situations including on site relief, disaster assessment, evacuation and sheltering those persons displaced in an emergency. This webinar describes the Red Cross activities and the role amateur radio can play in providing vital communications support. The intention is to provide Red Cross and amateur radio operators with a basic understanding of mutual expectations and needs in the sheltering environment and stresses efficient and accurate communications using various amateur modes including NBEMS.

This is also available at the atlantic division website.

There is a webinar at Wed, Apr 4, 2012 8:00 PM - 10:00 PM EDT

To register for this webinar, please go to this link:
https://www1.gotomeeting.com/register/803987488

4318. Status of the Midcoast (Maine) 80 meter NBEMS Net

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-04-05 18:45:08 UTC
From: kb1tce
Topic: 4318 Message: 4318

After about 1-1/2 years of weekly operation on 80 meters, the Wednesday Midcoast NBEMS Net is going to take a break.

Our group decided to try some different things and the current plan is to start a new 6 meter simplex digital net where we will continue to use the NBEMS suite but will also explore other modes such as EasyPal, etc.

The decision was made easier by the fact that there are now a fair number of HF NBEMS nets in which our members may participate, something that wasn't the case when we got started.

Last night's net was the last and we will commence with the new net in a couple of weeks.

This does not affect our 2 meter Sunday net on the KC1CG repeater.

73,
Steve KB1TCE

We've been running a 6 meter voice net for about 2 months now and have a packet system (BPQ32) that has 6 meters as an option. We're still learning but in general it's working out pretty well.

4324. 443.45 repeater down

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-04-10 00:01:08 UTC
From: Harry Bloomberg
Topic: 4324 Message: 4324

The 443.45 repeater is down. We suspect it may have been damaged by a storm that blew through Pittsburgh earlier this evening. Alas, due to the bomb threats against Pitt, we're not sure when we'll be able to get to the repeater for diagnosis.

So...I'll see if I can get permission to use another repeater for the Sunday night NBEMS net. It will likely not have Echolink or be linkable to New Castle, but that will be the best I can do for now.

4325. Altoona 146.82 repeater - Possible link to York/Harrisburg

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-04-10 22:30:47 UTC
From: wa3usg
Topic: 4325 Message: 4325

I wonder if anyone in this group ever uses the 146.82 Mhz (Tone: 123) repeater owned by the Horseshoe Amateur Radio Club (HARC) near Altoona. The repeater is located on top of Wopsy Mountain about 8 miles west of Altoona. Using a Yagi and about 100 watts, I can hit that machine directly from my QTH in Mechanicsburg, PA. Signal strength is pretty good. It might make an interesting experiment to see if we could send MT63 via this machine between Pittsburgh and the central PA area. I would certainly get permission to try it from the HARC first. Looking at a profile of the terrain between this repeater and Pittsburgh, it looks like this would be a clear shot for you guys.

Would anyone care to try a simple voice sked on this machine with me? If conditions are favorable, we could contact the HARC and ask if we could try digital. If this is a good path, perhaps we could think about using this location as a relay between Western PA and the central PA area. We are starting to experiment with simplex repeaters as a method to extend our range and one located here may prove promising. Perhaps even the HARC would be interested in getting involved.

I am flexible and could ready for a sked in a moments notice.

4327. Sunday Night Net Temporarily moving to 146.88

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-04-11 20:06:21 UTC
From: Harry Bloomberg
Topic: 4327 Message: 4327

The 8PM Sunday night paNBMES digital training net is temporarily moving to the 146.88 (no PL) repeater in Pittsburgh until the 443.45 repeater can be repaired. Thanks to Ed DeHart WA3YOA, Bill Kristoff N3BPB, North Hills Amateur Radio Club, and the Repeater Association.

We realize that 146.88 is not connected via Echolink and cannot be linked to Lawrence County, but this is the best that we can do. As this repeater is on 2M and not 440 MHz, who knows, maybe we'll pick up some new members. Plus it's on the WQED tower and has a huge footprint.

We do not know when we'll be able to get 443.45 back on the air. The repeater is located on the University of Pittsburgh campus and we must be escorted to the repeater site atop the Cathedral of Learning by the Pitt Police. We have been told to not contact them until the plague of bomb threats against Pitt ends as the Pitt Police are very busy and likely more than a little grumpy.

Just heard that suspects in the bomb threats may have been identified. If this stops the threats, perhaps we can get 443.45 back on the air soon.

73,
Harry Bloomberg W3YJ

> The 8PM Sunday night paNBMES digital training net is temporarily moving to the 146.88 (no PL) repeater

The W3EXW repeater on 146.88 does use 88.5Hz for tone squelch. The repeater transmits the tone all of the time. We turn the decoder on if we have a noise issue. It is always best to program 88.5Hz into your rig.

Thanks,
Ed DeHart

Gang:

My old Dell D-600 died on me a few months back, the video driver for the screen crapped out and so did the mouse function on the pad. I have used it with a external mouse and monitor since then but need something for portable use. I don't want to break the bank but need something that will get me on FLDIGI, and possibly a few of the other digital modes for CFARS/MARS etc when in the field, not worried about home as I have enough horsepower for that and power backup for when the ship hits the sand...I don't want to use it for the internet and stuff just digital/EMCOMM stuff.

I have a Dell Inspiron 1501 that has been good, but my YL and I own a business and much of our accounting backup stuff is on it, and I use it for teaching my students when using PPT presentations and don't want to tie it up with a bunch of other software.

So, I wonder what type of netbooks others are using for field work and how they perform? There are a number in the $200-$275 range that I could grab now and use. They are eMachines or ACER I guess is the maker of these units. One is the ACER AOD257, or the eMachine 350-2258 among others.

Ideas and suggestions are welcome...

4333. Re: [paNBEMS] Net Books

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-04-15 01:36:24 UTC
From: Dana Browne AD5VC
Topic: 4330 Message: 4333

If I may,

I have used 4 laptops/netbooks for digital modes. they all will do it, with a few provisos

1. Some modern netbooks are so cramped they combine the sound plugs into a single plug, replacing the two stereo jacks with a single 3.5mm jack with three or four contacts.

2. Windows 7 has a very different sound interface than previous OS. It tries to be "helpful" by muting other sounds when you try to use the microphone, and that can disable your ability to produce sounds.

If you plug in your microphone, check the control panel under
Sounds -> Manage Audio Devices

You then want to find under Recording the mic input device you plugged in (in addition to others like a built in microphone). Select the mic device you are using and click on Properties.
Under "Enhancements" you should Disable all sound effects.
The various features (DC OFfset cancellation, Noise suppression, etc) all interfere with, or degrade, your ability to use the mic input.

Do the same for the audio out. If you don't disable these, you will find either the transmit or the receive will become inoperable.

For the netbooks, I have found a couple that have very low audio output. If you get an external USB sound card (they cost under $5 on amazon or ebay, and consist of little more than a USB plug and two stereo jacks). they seem to cure the low audio issue, and you merely set your software to use that sound card.

Good luck.

internet and stuff just digital/EMCOMM stuff…

I have a Dell Inspiron 1501 that has been good, but my YL and I own a business and much of our accounting backup stuff is on it, and I use it for teaching my students when using PPT presentations and don't want to tie it up with a bunch of other software.

So, I wonder what type of netbooks others are using for field work and how they perform? There are a number in the $200-$275 range that I could grab now and use. They are eMachines or ACER I guess is the maker of these units. One is the ACER AOD257, or the eMachine 350-2258 among others…

Ideas and suggestions are welcome…….

Fred

Dave,

We never seem to have much propagation on 40m during the day beyond our intended 300 mile or so NVIS radius. I would have expected 40 to be a little longer than that even between 11am and noon ET. But this has been pretty consistently the case for many months now that we have been running the 80/40 Sunday morning sked.

Subject: SEC Bulletin

SEC Bulletin

The Red Cross has called a drill for May 19 - DAYTON weekend- If you can help staff any of the shelter locations and provide NBEMS support, please contact the County EC. The following summarizes the information available; so far I do not have a specific time.

Larry Keller

SEC WPAARES

DRILL INFORMATION

WPA ARES will be participating in an important Drill on May 19. This is the first real test of our 1. Ability to muster operators 2. Practice setup / support at a shelter and 3. Test our efficiency in "Getting the Message Through!

EVENT SUMMARY from RED CROSS-
On Saturday, May 19, we will be testing our abilities and capacity to quickly and efficiently open multiple shelters across our entire region in the case of a large-scale disaster. We will be activating all of our Community Evacuation Center Teams to open 12 shelters across the southern half of our 26-county Western Pennsylvania Region. We will also be opening our Emergency Operation Centers, utilizing our partnerships such as Amateur Radio Operators, and deploying all three of our Emergency Response Vehicles, among other disaster operation activities

ARES PARTICIPATION -

The entire section is asked to participate. The following Counties will have direct shelter setup responsibility. ECs should prepare a plan and assure sufficient operators.

TO PARTICIPATE: Contact your County Emergency Coordinator to Volunteer; if you are asked to help, please help us make a good showing. View the Red Cross Sheltering Slides on the website for background information.

EOC OPERATIONS-

If you are part of RACES in your county, please hass the word to the RO / ACSO to open the EOC station in the following Counties.

Allegheny, Washington, Butler EOC (Beaver optional.

SHELTER LOCATIONS-

Allegheny County-

Red Cross Headquarters 221 Blvd of the Allies, Pittsburgh

Pittsburgh Technical Institute 1111 McKee Rd. Oakdale, PA 15071

Elizabeth Central VFD 425 Scenery Dr. Elizabeth , PA 15037

Greentree Church of LDS(Tentative) 46 School St. Greentree, PA 15220

Springdale 325 School St. Springdale, PA 15144

BUTLER COUNTY-

Community Alliance Church 800 Mercer Rd Butler, PA 16001

Greene County-

Carmichaels Activity Center 100 Nemicolon Rd. Carmichaels, PA 15320

Westmoreland County-
Penn Trafford Middle School 100 E. Britton Ave. Trafford, PA 15085

Westmoreland CC Youngwood 145 Pavilion Ln. Youngwood, PA 15697

New Kensington 3550 Seventh St. Rd, Rt 780 Upper Burrell, PA 15068

WASHINGTON COUNTY-

Monongahela VFD 151 W. Main St. Monongahela, PA 15063

Please PASS the word!! Feedback on this reflector is appreciated!

4350. Announcement -- TS-590S TechNote: SSB Audio Handling v1.0

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-04-22 06:50:45 UTC
From: Ian Wade G3NRW
Topic: 4350 Message: 4350

TS-590S TechNote: SSB Audio Handling v1.0
==========

I have posted a new TS-590S TechNote on the TS-590S Resources Page.

The aims of the TechNote are:
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
-- To summarize the many features built into the TS-590S for handling SSB audio.

-- To dispel some of the myths and misunderstandings arising from Kenwood's inappropriate use of the word "DATA" in its documentation.
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

Emphasis is on the *functionality* of the TS-590S, describing what the radio does, rather than how to operate it. For the most part, this document is not a HOWTO (although it does include step-by-step instructions for setting up TX and RX audio equalizer profiles using the ARCP-590 control program).

The TechNote also includes detailed information on how TX keying works, insofar as how it determines which audio input the radio uses when transmitting.

The document is a long one: 28 pages. Please take the time to read it thoroughly. It should present a consistent picture of how this wonderful radio works, and will hopefully clear up some of the misconceptions that have appeared on the reflectors from time to time.

I must acknowledge the people who reviewed early drafts of the document: Steve London (N2IC), Frank Riley (KK0K), Don Snodgrass (KG9OM), Rob Stampfli (KD8WK), Joe Subich (W4TV) and Jose Maria Trueba (EA2JX). Their contributions helped me turn the very rough first draft into something much more readable. Many thanks gentlemen!

To download the TechNote, go to the TS-590S Resources Page:

http://homepage.ntlworld.com/wadei/ts-590s.htm

Scroll down to the "TECHNOTES" section, then click on the link:

"TS-590S TechNote: SSB Audio Handling".

As usual, if you find any errors in the document, or anything that isn't clear, please get back to me.

--
73

Ian, G3NRW

4352. Winter Storm

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-04-22 13:55:10 UTC
From: KB3FXI
Topic: 4352 Message: 4352

Hello all,

Much of Western PA and NY are under either a Winter Storm Watch or Warning as I'm composing this message.

This is potentially a very dangerous situation with 4 or more inches of heavy wet snow on trees that now have leaves on them, combined with up to 40 mile per hour winds.

If the worst case weather scenario plays out, there could be extended, widespread power outages.

I would like to suggest that if the storm does produce widespread problems, we solicit some relay volunteers to monitor the NBEMS HF frequencies to offer our assistance as individual digital relay volunteers.

Much of the possible effected areas are very active with NBEMS on the following frequencies:

3.5785 USB, 1300 Hz center, 4/500 Olivia, VA Digi Net
3.5835 USB, 1000 Hz center, 8/500 Olivia, paNBEMS
7.073 USB, 1000 Hz center, 8/500 Olivia, paNBEMS
7.036 USB, 1000 Hz center, 8/500 Olivia, NY NBEMS

Subject: [paNBEMS] Winter Storm

Hello all,

Much of Western PA and NY are under either a Winter Storm Watch or Warning as I'm composing this message.

This is potentially a very dangerous situation with 4 or more inches of heavy wet snow on trees that now have leaves on them, combined with up to 40 mile per hour winds.

If the worst case weather scenario plays out, there could be extended, widespread power outages.

I would like to suggest that if the storm does produce widespread problems, we solicit some relay volunteers to monitor the NBEMS HF frequencies to offer our assistance as individual digital relay volunteers.

Much of the possible effected areas are very active with NBEMS on the following frequencies:

3.5785 USB, 1300 Hz center, 4/500 Olivia, VA Digi Net
3.5835 USB, 1000 Hz center, 8/500 Olivia, paNBEMS
7.073 USB, 1000 Hz center, 8/500 Olivia, paNBEMS

7.036 USB, 1000 Hz center, 8/500 Olivia, NY NBEMS

Mike,

I"m going to guess that you're going to have to get an Icom 13 pin connector and connect that properly to your little interface.

Once you have that done, you need to tell FLDIGI what port you're using for the PTT. That's pretty much it.

Tune up the 706 to whatever antenna you are using and make sure you can transmit by toggling on and off the "Tune" button at the top right corner of FLDIGI. From there, make sure your power out isn't over 50w and you want to make sure that your audio levels from your sound card are set so that you only get little or no ALC readings on the 706 when you transmit and have the rig meter set to ALC.

Usually the tricky part is finding the right COM Port for your push to talk. That setting is under Configure, Rig Control, Hardware PTT. I use the USB Signalink, so my settings are different but I think you need to check the "use separate serial port PTT" and make sure you have the correct com port selected.

4369. Connect To Server Logbook problem

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-04-23 03:33:41 UTC
From: Fred VE3FAL
Topic: 4369 Message: 4369

Guys:

Either it has been a long week or the grey hair is proving itself.

I just picked up a new netbook to dedicate to NBEMS after my Dell D600 died..

I got the latest stuff in the netbook, FLMSG,FLLOG etc.I tried to copy my log files from my other spare laptop that had the log file in it and put on the netbook, I try yo connect to server and it wont do it and I cant bring up my logbook.

Any ideas as to what I may be doing wrong.

I have done this a few times now with no problems.

I am finally going from old faithful Windows XP to Windows 7 so this a learning curve for me as well..

Cheers

Fred

From: KB3FXI
Topic: 4352 Message: 4370

According to reports I heard from a few hams on the WAN repeater system, snow is coming down in sections of MD (higher elevations) and in the Ridges of WPA.

We will be monitoring 7.073 USB, 8/500 Olivia at 1000 Hz waterfall center through the day.

If you have the ability to do so, please jump on and put out an FLMSG message if you are within the storm watch and warning areas with any situation reports or weather reports you may have.

I think there should be some folks monitoring to help out with any relays, should that become necessary.

Thanks.

Subject: [NBEMSham] ARES: Storm causes state agency activation (NY)

FYI, for NY western region..

NYSDOH Western Region has initiated Incident Command.
The WR Health Operations Center is being operated out of Rochester.
SOEM has activated the State Emergency Operations Center this morning
at 0600, and will collect regular status reports from the Regions.

Andy K3UK
ARES EC Chautauqua County NY

4375. message relay

Been relaying what messages I hear to Harrisburg, so if you have anything to report, I'll be listening on 7.073.

Wind gusts here to 41 mph!

Gary - KC8YJJ

4376. NBEMS relay help Fw: ACS condition code 2

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-04-23 19:24:12 UTC
From: David Kleber
Topic: 4376 Message: 4376

Hello all,

I just got an FLMSG message from KC8YJJ, Gary in Toronto Ohio:

################
LOSS OF POWER
TO: PaNBEMS
FROM: KC8YJJ
SUBJ: LOSS OF POWER
DATE: 2012-04-23
TIME: 1427L
MESSAGE:

LOST GRID POWER HERE @ 2:25 LOCAL, AM NOW ON SOLAR/BATTERY. CAN NO LONGER RELAS AS I HAVE ALSO LOST INET CONNECTION. 73 GARY - KC8YJJ|################

Gary was doing our email relays to the WPA ACS officer but he has now lost commercial power and can't access his Internet connection.

Could someone else pick up the 40m monitoring/relay to email? The WPA ACS Officer address is wa-acso@.... Gary had been saving the HTML view and emailing them as attachements. We were also copying cgarfold@....

Please let me know if you can monitor 7.073 USB and email relay until about 5pm. I should be able to pick it up from there.

And, please feel free to transmit your situation/weather reports if you're in affected area of the storm. 7.073 USB, 8/500 Olivia, 1000 Hz center waterfall up until 6pm. Then we'll switch to 3.5835 USB and use 7.073 as backup.

Thanks.

-Dave, KB3FXI

Here's the latest update from PA ACS Officer...

----- Forwarded Message -----
From: Cynthia Garfold <cgarfold@...>
Sent: Monday, April 23, 2012 2:59 PM
Subject: RE: ACS condition code 2

At 3:00 pm the SEOC Activation level is 1 and ACS condition code is 1.
Continue forwarding sitreps to your area ACS officers.

Western Area - Dave Hunter wa-acso@...

Central Area - Travis Best ca-acso@pa.gov

Eastern Area - Chris Post ea-acso@...

Rodney Gallagher(hqa-acso@...) will be at the State EOC for monitoring ACS nets.

Thank you

Cynthia A Garfold KB3LZN

It would be nice to have a local / reliable Winmor station to hit. Last week at Skyview, I think it took about 45 minutes of fishing around before I could find a winmor station to connect to.

The think with Winmor/Winlink is, I think it would turn into a cluster in a major situation where everyone would be trying to get into the machine, all of whom will be thinking their message is the most important. There's no traffic director like you have on a net and no delivery confirmation either.

I still think a local Winmor node on 80m would be nice to have.

Don't forget the VHF RMS Winlink packet station WX8EMA-10 on 145.070
in Lisbon, OH.

You can digi through WX8EMA-3.
Should be able to hit it from Pittsburgh.

Topic: 4385 Message: 4385

Hello all,

Harry (W3YJ) and I had a personal disagreement on the role of paNBEMS today and Harry has decided to drop out of paNBEMS.

Harry has asked to be removed from this list (done), he stated he will no longer pay for the website, and asked that we recruit another NCS operator for the Sunday evening UHF net.

I do not currently have control of, or access to, the paNBEMS.org website, or the domain name registration. So, any changes made to the site moving forward are not of my making, and I am not certain that the website will remain active/available.

If the website is closed, or if it changes direction, we will continue to share information here on the paNBEMS yahoo group list as we have to this point over the years.

I will post more information to the paNBEMS Yahoo Group list regarding the future of the paNBEMS.org website when I have more information to share.

The UHF Sunday night Pittsburgh/WPA net will be suspended effective immediately with no substitute or alternative schedule at this time.

All of our other schedules will remain in place and fully active. Here are the current on the air schedules for paNBEMS:

- 2m Simplex - First Wednesday of every month, 9:30 PM ET, 145.530 MHz FM simplex, voice/NBEMS MT63 2k long. paNBEMS will start practicing making contacts and sending FLMSG messages with an emphasis on building participation and sending bulk messages and multi hop relays. Please join in and spread the word!

- paNBEMS weekly HF Net starts at 10:00 AM local time every Sunday morning with Net Control call on 3.5835 MHz USB using 8/500 Olivia, 1000 Hz center waterfall frequency. After any traffic is passed on the net, we may proceed by sending an MT63 1k long (1000 Hz, 64 bit long interleave) bulletin broadcast message, experiment with different modes or NBEMS alpha products. At approximately 11am ET we may switch to 7.073 USB, Olivia 8/500 for a retransmission of our weekly bulletin followed by propagation testing and a call for additional stations.

Hello all,

Here's an online map I found yesterday that shows power utility outage numbers for the counties in PA and some of the counties in our surrounding states:

http://outages.firstenergycorp.com/pa.html

At one point yesterday, Westmoreland County had the highest number of affected residents at over 20,000 without power.

Fred

Yes it can be done in Windows. Suggest you extract the files
directly to your flash drive; that gets all the files, and it will
run.

Gary and Fred,

I think the issue is, FLDIGI and FLWRAP should run right off a USB drive but when a message comes in and is received, does that message get extracted to a spot on the drive, or is it going to try to go to some standard directory on the local hard drive of the computer you're running on.

I seem to recall this question coming up before, but I think it was a very long time ago and the message directories have probably changed since then.

I think the thing for us to do may be just to do an install on a USB drive, plug that in on another computer and receive a message just to see what happens. Maybe we could find some folks to test this after the net on Sunday.

Don't know about running them from a thumb drive, but they can be loaded onto a computer from one. A thumb drive could be a very easy method of getting the latest versions of all of the files on several computers at the same time.

Took me longer to find the usb drive than it did boot into linux. It stores the files in /root/.nbems, there are 3 directories there. ARQ, ICS, and WRAP, which all reside on the thumb drive.

With that said, they are not accesable if you thake the usb drive and plug it into a windows machine. They are stored in a data file that linux writes to the USB stick called lupusave. I assume this to be compressed somehow and the linux distro opens it at boot.

POSITION:
FROM: K3UK
POSITION: ARES EC Chautauqua County NY
SUBJ: WNY RACES- 36 Agency Disaster Drill (Storm West) April 24-25
DATE: 2012-04-25
TIME: 1915L
MESSAGE:
Information directly from New York State Dept of Health is quoted
below. This drill included 36 agencies (hospitals, Local Health, NOAA,
DOH, RACES) All hams used NBEMS and FLDIGI at EOCs and hospitals

" Tuesday was a busy and very successful day for StormWest! A brief synopsis:

Seven of eight counties and 23 hospitals participated i the
amateur radio exercise on Tuesday evening.
Message data transmitted via ICS 213 included patients to be
evacuated/ transferred by bed type; and transportatioon6needs for
moving those patients using TALS levels.
During the radio drill, Hospitals and EOC sites in Erie, Niagara,
Allegany, Genesee, and Chautauqua were able to transmit message
traffic digitally via the amateur radio using the SignaLink device,
and it was very cool to watch! "

End quote...

I like it when disaster officials describe hams radio participation as "very cool to watch" .

From: David Kleber
Topic: 4402 Message: 4403

This is a forward from the WPAARES list...

A few weeks ago, the antenna on Pitt's 443.45 repeater was destroyed during a thunderstorm. We're hoping to have the antenna replaced by Pitt electricians soon. Once the repeater is back up, we will be restarting the Sunday 8PM NBEMS net. This net will have a new name, the Western PA ARES NBEMS net.

So...please follow the WPA ARES mailing list for the announcement for when the net will be resuming. Also, I will need help running the net, so if you're interested in being a Net Control Station, let me know and I'll put you into the NCS schedule.

73,
Harry Bloomberg W3YJ

ARLX003 Annual Armed Forces Day Crossband Test Scheduled for May 12

ZCZC AX03
QST de W1AW
Special Bulletin 3 ARLX003
From ARRL Headquarters
Newington CT May 2, 2012
To all radio amateurs

SB SPCL ARL ARLX003
ARLX003 Annual Armed Forces Day Crossband Test Scheduled for May 12

The Army, Air Force, Navy, Marine Corps and Coast Guard are
co-sponsoring the annual Military/Amateur Radio Crossband
Communications Test in celebration of the 62nd anniversary of Armed
Forces Day (AFD). Although the actual Armed Forces Day is celebrated
on the third Saturday in May -- May 19 in 2012 -- the AFD
Military/Amateur Crossband Communications Test will be conducted on
May 12 to prevent conflict with the Dayton Hamvention, scheduled for
May 18-20.

The annual celebration features traditional military-to-amateur
crossband communications SSB voice and Morse code tests. These tests
give Amateur Radio operators and short wave listeners an opportunity
to demonstrate their individual technical skills and to receive
recognition from the appropriate military radio station for their
proven expertise. QSL cards will be provided to those stations
making contact with the military stations.

Military-to-amateur crossband operations will take place on the
dates and time in UTC on the frequencies listed for each station.
Voice contacts will include operations in single sideband voice
(SSB). Some stations, depending on propagation and staffing, may not

operate the entire period. Participating military stations will transmit on selected military MARS frequencies and listen for Amateur Radio stations in the amateur bands. The military station operator will announce the specific amateur band frequency being monitored. Duration of each voice contact should be limited to 1-2 minutes.

The schedules and frequencies of participating military stations can be found in PDF format on the web at,
http://www.netcom.army.mil/MARS/docs/AMC_Test_2012.pdf.

Date: 2012-05-02 18:01:45 UTC
From: David Kleber
Topic: 4405 Message: 4406

Well, I stand corrected...

I just printed up the PDF guide for the exercise and there are in fact several stations listing digital modes on their call frequencies.

FT Huachuca AZ is listing RTTY on 7639.5 and MT63 on 13.512.5
NAVMARCORMARS NNN0ASF in KS lists PSK31 on 7394.5 LSB and PSK31 on 13.974 USB

The Secretary of Defense message will be transmitted by many stations in digital modes... check the PDF for all the details:
http://www.netcom.army.mil/MARS/docs/AMC_Test_2012.pdf

I'm pretty sure last year there was no message from the Secretary of Defense, which was a bit of a let down. Let's hope there is one this year.

Subject: [paNBEMS] www.paNBEMS.org

Hello all,

Harry (W3YJ) and I had a personal disagreement on the role of paNBEMS today and Harry has decided to drop out of paNBEMS.

Harry has asked to be removed from this list (done), he stated he will no longer pay for the website, and asked that we recruit another NCS operator for the Sunday evening UHF net.

I do not currently have control of, or access to, the paNBEMS.org website, or the domain name registration. So, any changes made to the site moving forward are not of my making, and I am not certain that the website will remain active/available.

If the website is closed, or if it changes direction, we will continue to share information here on the paNBEMS yahoo group list as we have to this point over the years.

I will post more information to the paNBEMS Yahoo Group list regarding the future of the paNBEMS.org website when I have more information to share.

The UHF Sunday night Pittsburgh/WPA net will be suspended effective immediately with no substitute or alternative schedule at this time.

All of our other schedules will remain in place and fully active. Here are the current on the air schedules for paNBEMS:

- 2m Simplex - First Wednesday of every month, 9:30 PM ET, 145.530 MHz FM simplex, voice/NBEMS MT63 2k long. paNBEMS will start practicing making contacts and sending FLMSG messages with an emphasis on building participation and sending bulk messages and multi hop relays. Please join in and spread the word!

- paNBEMS weekly HF Net starts at 10:00 AM local time every Sunday morning with Net Control call on 3.5835 MHz USB using 8/500 Olivia, 1000 Hz center waterfall frequency. After any traffic is passed on the net, we may proceed by sending an MT63 1k long (1000 Hz, 64 bit long interleave) bulletin broadcast message, experiment with different modes or NBEMS alpha products. At approximately 11am ET we may switch to 7.073 USB, Olivia 8/500 for a retransmission of our weekly bulletin followed by propagation testing and a call for additional stations.

4408. New TS-590S HOWTO: Digital QuickStart

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-05-03 20:44:21 UTC
From: Ian Wade G3NRW
Topic: 4408 Message: 4408

When writing my SSB Audio Handling TechNote recently, I wanted to check out some of the more well-known digital communications packages to make sure they worked as expected. I made some brief configuration notes as I went along, and I have now put these notes into a new HOWTO.

Go to the TS-590S Resources Page:

http://homepage.ntlworld.com/wadei/ts-590s.htm

Scroll down to the "HOWTOs" section, then click on the link:

"TS-590S HOWTO: Digital QuickStart"

The notes for each package are very brief, but hopefully just enough to get started.

4409. MT63 500 long interleave and the Static Crash!

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-05-04 04:31:36 UTC
From: KB3FXI
Topic: 4409 Message: 4409

Hello all,

I was at the WX3SKY club station tonight and the electrical storm static crash conditions (qrn) were just about as bad as I have ever experienced.

There were strong storms up around MI, WI and ON as well as Central PA. I was trying to monitor an Olivia QSO on or about 3.583 but just couldn't pull out decent copy so I figured I'd go the the old reliable MT63 500 Hz long interleave mode and put out some calls.

Sure enough, Dave in MN (wb0kgn) came back to the call and we had pretty good copy. Thanks also to Fred in ON (ve3fal) for jumping in, too, although I didn't have much copy on him, but Dave in MN did.

This was a great opportunity to run some actual testing under not only weak signal conditions, but heavy qrn, too. MT63 500 long performs extremely well - better than Olivia - under the static crash scenario.

As an additional test from the wx3sky club station, wc3o (club radio officer) gave me an elmer lesson on one of our Ameritron amps. He showed me how to tune her up and we took it up to 500 watts for the live qrn test which took me up to 100% copy to wb0kgn in MN.

I'm not a big fan of running power, but in extremely poor conditions like we had tonight, it did provide that extra boost to get me up to 100% copy. For a relay station, this could be critical for emcomm.

An additional note on MT63... you can run up to about 80% duty cycle, vs the typical recommended 50% duty cycle for most other modes but you still need to watch that you don't overdrive your audio. Running a high level on your ALC meter reading on your transceiver is not a result of running high power out. It is a result of overdriven audio.

Thanks to wb0kgn and ve3fal, longtime HF digi ops, for helping out with the very fun test tonight.

-Dave, KB3FXI

4410. FLMSG 1.1.14

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-05-04 04:40:30 UTC
From: KB3FXI
Topic: 4410 Message: 4410

Hello all,

During a VHF net Wednesday evening we identified a bug in the most recent release of FLMSG (1.1.14).

The scenario is when you receive an auto pop up FLMSG message, a warning box pops up that indicates that you have to enter your call sign. Even after completing the process of entering the personal data, the warning box reappears on the next received message.

W1HKJ confirmed the bug and has a test version out and a new release will most likely follow in the next week or so.

If you have not already updated to FLMSG 1.1.14, please put off the update until the new maintenance release with the bug fix comes out.

-Dave, KB3FXI

4411. FLMSG info and New Release (recommendation to upgrade)

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-05-04 16:48:46 UTC
From: David Kleber
Topic: 4410 Message: 4411

Hello all,

For those who are new here, or who are just starting out with the NBEMS / FLDIGI software, I'd like to explain a little bit about FLMSG.

FLMSG is an NBEMS application for form-based messaging. Although it is a separate stand alone application, it is designed to work with FLDIGI. FLMSG allows us to create messages in common form bases such as the ICS forms, several American Red Cross forms, and forms for NTS/Radiogram, MARS and Hospital ICS. Once the information or messages are entered into the forms on FLMSG, you can export and save the file. That file can then be dragged and dropped into the FLDIGI transmit text window, toward the bottom of the FLDIGI screen. The FLMSG message text includes some minimalistic code for the message formatting and also includes a checksum calculation.

Receiving stations with FLDIGI / FLMSG can then automatically confirm 100% copy when the message automatically pops up. The message can also be automatically displayed in the FLMSG form or as an authentic form view in your default web browser. Here's a video that shows a very complex ICS 205 form being received and automatically displayed:
http://youtu.be/pfNTZWNLTWs (if you go to about 3 minutes in the video you will see the end of the text being received and then the ICS 205 automatically popping up in my web browser)

So, that's a quick explanation of FLMSG. If you haven't already, download, install and give it a shot.

If you're new to FLMSG, drop a line here on the email list if you would like to arrange an on the air test schedule. We also send FLMSG messages regularly on our nets for testing and practice.

     ##################
NEW FLMSG RELEASE - 1.1.15
     ##################

The FLMSG bug identified on Wednesday evening has been corrected in this morning's release of FLMSG 1.1.15.

I would suggest making the upgrade to all your computers and thumb drives. After downloading and installing FLMSG, remember to go to FLDIGI, Configure, Misc, NBEMS and make sure the FLMSG directory is pointing to the flmsg.exe file in the FLMSG 1.1.15 folder... click save, then close.

You will notice that the new FLMSG graphical user interface is much less cluttered now that the various message forms are selected from the drop down menu. You can get the new version at:

http://www.w1hkj.com/downloads/flmsg/

-Dave, KB3FXI

Here are the change details from 1.1.13 to the new version 1.1.15:

Changes since version 1.1.13 are significant. The user interface has changed from a tabbed metaphor to a pull down menu metaphor. This makes the main dialog less busy and provides more room for controls. New Red Cross forms added. Control fields added to the flmsg datagram to allow tracking who originates, modifies and transmits the form. These are not added to the MARS forms.

The on-line help has been updated to 1.1.14. Make sure that you refresh your browser the first time you access the on-line help as your browser may bring up a locally saved page.

73, Dave, W1HKJ

List of changes from Version 1.1.13 to 1.1.14

Version 1.1.14 - Maintenance release

  Radiogram edits
    * Force message ck when exporting to wrapped file or sending autofile
    * Force TIME format in message to be either HHMML or HHMMZ
      depending on configuration specifying local or GMT.
    * Added control fields to radiogram datagram

  Text Edit
    * handle_key_bindings - add test for NULL struct
    * handle CAPS_LOCK event

  Check my_call
    * check for my_call entry not empty.

  Widget size corrections
    * ICS205a
    * Red Cross Safe & Welfare

  FTextView
    * Fix for compiling against FLTK-1.1.10

  Cast fix
    * 64 bit compiler refuses to allow cast of (void *) to (int)

  Control fields
    * added control fields to wrapped / transferred messages
      <origin>{station originating message [datetime]}
      <modby>{stations modify message [datetime]}
      <sender>de {station transmitting message [datetime]}
    * datetime in YYYYMMDDHHMMZ format
    * added striplf function to remove trailing linefeed from stored text
    * corrected UI positioning / sizes in various forms

  Personal data
    * created separate configuration dialog for personal data
    * removed from Radiogram configuration dialog

  MARS Army msg
    * added MSG NBR field to form

```
    * suppress INFO field on html/text reports if empty

  REDX 5739A-B
    * Added Red Cross forms 5739A and 5739B

  Default folders
    * Modified default folder behavior for Save and Save As
    * Modified debug save method

  Red Cross 5739
    * Added support for the Red Cross Form 5739
      On-site detailed damage assessment worksheet

  Menu Paradigm
    * Changed from Tab manager to Menu manager for form selection
    * Added Operational Period To field in ICS205
    * Corrected :dt1: / :dt2: swapping when saving ICS205
    * Increased radiogram html CHK field width to 10%
    * Corrected tooltips on radiogram fields
    * Added drag-n-drop panel and oval target on main display

  Desktop
    * Changed desktop name in flsmg.desktop

  Event Log
    * enable event log
    * add CRC checksum events

Version 1.1.15 - Maintenance release

  IARU header
      * Added header tracking info to IARU form

  Auto open
      * Moved status load before auto open processing

  MARS
      * Removed 'M' precedence designation from Army message form
      * Changed default precedence to 'R'outine
```

If mt63 has an 80% duty cycle then the usual transmitter rated at 100 watts voice ssb should probably be run at nearer 45 watts. I did run mine at 80 watts last night and did not notice tht the finals were any hotter tha usual...but then I wasn't as long winded as is my custom.

Dave,

My understanding of the duty cycle ratings has always been that it takes into account the difference between phone and digital. So a 50% recommended duty cycle for a 100w SSB rig would be 50 watts. Are you suggesting, in this example, it should be 25w?

Voice SSB has a duty cycle of 33%. which means that if your peak power is 100 watts, your average power ouput is 33 watts. Most of our radios are rated at 100 watts. voice SSB. While voice is a 33% duty cycle, Olivia and RTTY for example are 100% duty cycle modes. Their average power and their peak power are the same.

At about 45 watts, assuming that the duty cycle for MT63 is 80%, your average power output would be about 35 watts...which is waht most of our radios are rated at.

Dave

Subject: Re: [paNBEMS] MT63 500 long interleave and the Static Crash!

Dave,

My understanding of the duty cycle ratings has always been that it takes into account the difference between phone and digital. So a 50% recommended duty cycle for a 100w SSB rig would be 50 watts. Are you suggesting, in this example, it should be 25w?

Subject: Re: [paNBEMS] MT63 500 long interleave and the Static Crash!

If mt63 has an 80% duty cycle then the usual transmitter rated at 100 watts voice ssb should probably be run at nearer 45 watts.   I did run mine at 80 watts last night and did not notice tht the finals were any hotter tha usual...but then I wasn't as long winded as is my custom.

Subject: [paNBEMS] MT63 500 long interleave and the Static Crash!

Hello all,

I was at the WX3SKY club station tonight and the electrical storm static crash conditions (qrn) were just about as bad as I have ever experienced.

There were strong storms up around MI, WI and ON as well as Central PA. I was trying to monitor an Olivia QSO on or about 3.583 but just couldn't pull out decent copy so I figured I'd go the the old reliable MT63 500 Hz long interleave mode and put out some calls.

Sure enough, Dave in MN (wb0kgn) came back to the call and we had pretty good copy. Thanks also to Fred in ON (ve3fal) for jumping in, too, although I didn't have much copy on him, but Dave in MN did.

This was a great opportunity to run some actual testing under not only weak signal conditions, but heavy qrn, too. MT63 500 long performs extremely well - better than Olivia - under the static crash scenario.

As an additional test from the wx3sky club station, wc3o (club radio officer) gave me an elmer lesson on one of our Ameritron amps. He showed me how to tune her up and we took it up to 500 watts for the live qrn test which took me up to 100% copy to wb0kgn in MN.

I'm not a big fan of running power, but in extremely poor conditions like we had tonight, it did provide that extra boost to get me up to 100% copy. For a relay station, this could be critical for emcomm.

An additional note on MT63... you can run up to about 80% duty cycle, vs the typical recommended 50% duty cycle for most other modes but you still need to watch that you don't overdrive your audio. Running a high level on your ALC meter reading on your transceiver is not a result of running high power out. It is a result of overdriven audio.

Thanks to wb0kgn and ve3fal, longtime HF digi ops, for helping out with the very fun test tonight.

-Dave, KB3FXI

Sorry... forgot to remove this from the calendar...

the W3YJ repeater, to the best of my knowledge, is still down. Harry has moved the net under ARES. Here's the announcement:

-Dave, KB3FXI

From: Harry Bloomberg <hbloomb@...>
To: wpaares@yahoogroups.com
Sent: Tuesday, April 24, 2012 12:40 PM
Subject: [wpaares] The Sunday night NBEMS net will be returning!

A few weeks ago, the antenna on Pitt's 443.45 repeater was destroyed during a thunderstorm. We're hoping to have the antenna replaced by Pitt electricians soon. Once the repeater is back up, we will be restarting the Sunday 8PM NBEMS net. This net will have a new name, the Western PA ARES NBEMS net.

So...please follow the WPA ARES mailing list for the announcement for when the net will be resuming. Also, I will need help running the net, so if you're interested in being a Net Control Station, let me know and I'll put you into the NCS schedule.

4420. TS-590S HOWTO: Remote Operation (with a twist)

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-05-07 08:06:18 UTC
From: Ian Wade G3NRW
Topic: 4420 Message: 4420

I have posted a new TS-590 HOWTO on Remote Operation. Go to the TS-590 Resources Page:

http://homepage.ntlworld.com/wadei/ts-590s.htm

Scroll down to the end of the "HOWTOs" section, then click on the link:

"*** TS-590S HOWTO: Remote Operation".

The HOWTO has full details on setting up the TS-590S for remote operation over the internet, using Skype and TeamViewer.

The twist? The HOWTO also describes the capability of the TS-590S to send monitored sidetone audio along the same path as the RX audio. This means that from the comfort of your local PC you can listen to the radio's TX Monitor, letting you check and adjust the quality of the TX audio in (more or less) real time -- no more guessing how your signal might sound thousands of miles away!

4424. Red Cross Drill on May 19

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-05-10 02:23:45 UTC
From: RabeM
Topic: 4424 Message: 4424

I have been asked by the Greensburg Office of the Western Pennsylvania Region of the American Red Cross to assist them with the drill upcoming on May 19. We anticipate that at some point in the drill, we will be told that communications by the usual means are not working and we will have to pass traffic by ham radio. Therefore, we need ham volunteers to service the two shelter that will be set up during the drill, as well as the Red Cross "EOC" located at the Greensburg Office.

One shelter will be set up at the Westmoreland County Community College near Youngwood, PA and the other will be at the Penn State Campus in New Kensington. I trust that we can use the local VHF repeaters in each local area to pass traffic. It would be nice if we could do so by one or more digital modes in addition to the standard phone method.

The drill will start on Saturday morning, May 19, at 9:00 AM and will probably shut down near 1 PM that afternoon. If you wish to participate in the Red Cross drill and get some good insight into Red Cross shelter operations during a disaster in Westmoreland County. please contact Rabe Marsh, W3TNU at rabemarsh@....

From: Fred VE3FAL
Topic: 4429 Message: 4429

Been monitoring daily on 14.065 and have not seen anything, do realize bands are not that great at this point and time.

Did copy a great qso the other evening between KB6HOH and N6PYF on 7.073, time was about 0500-0600 z..

40 meters still holds some of the better propagation at least to this area.

Cheers

Gang:

I am running a FT897 and have the 857 and a 817 as well. But the 897 has been my dedicated digital rig. Running latest FLDIGI and noticed something strange happen as of late.

My radio wants to switch to transverter mode and I am not sure what mode or why it is doing that, when it does my power seems to automatically drop to 5 watts, so the last few days all my contacts have been using 5 watts without me knowing.

Again not sure why the mode changes.

Any ideas from anyone.

4434. NBEMS HF

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-05-20 17:42:23 UTC
From: David Kleber
Topic: 4434 Message: 4434

Wide area (regional and national) coverage on HF is a great challenge. Playing around and making contacts on 20m, for instance, is fun, but nets present a whole different challenge. When we make casual contacts, we're mostly picking the strong stations, where ever they may be at any given time of the day or night. Nets, on the other hand, operate at specific times, on specific frequencies, with check ins either from anywhere or from specific regions.

I think we really need to VASTLY increase or numbers of HF NBEMS ops out there to really be able to function properly under poor propagation and skip conditions on 20m, 30m and even 40m.

The perfect example of a 20m net operation done right is the Maritime Mobile net on 14.300 phone. They have established a very well known spot (14.300 USB Phone). Their net has a very good level of participation, from not only the volunteer NCS stations, but from their very effective use of their relay stations as well.

We're looking at some ideas on how we can increase NBEMS HF participation... I'll be sure to post here when we have more details.

From: wb0kgn@q.com
Topic: 4434 Message: 4435

My theory is that the nets will grow if they emphasize training. While training can involve training bulletins, it could involve other things:

NCS asking a station to relay another station...even if it did not need relaying...just for practice.

Counting checkins off by twos and asking those numbered one to e-mail a message to those numbered two, and have those numbered two to report in when they receive it. (Plain Text)

Same thing as the above but with an HTML. E-mailing HTML's can be a pain. (If I ask my browser to send an HTML to Century Link e-mail software, nothing happens.)

Hello all,

Here is a summary of my activities and observations during the Red Cross drill conducted in Western PA on May 19, 2012.

I was stationed at the Skyview Radio Society near New Kensington, PA. Skyview Radio Society is a 50 year old club station which owns its own building, property and Amateur Radio gear, including station transceivers, emergency battery backup power, and related equipment as well as several antenna towers and high gain antennae. Skyvkew is also an American Radio Relay League (ARRL) designated Emergency and Relay Station.

Skyview has the capability of running emergency communications through local repeaters (including the club's repeater, k3mjw), by VHF Simplex, and HF. All three methods of radio communications were successfully utilized during the exercise.

From the station at Skyview, I successfully established contacts with stations located at the Greensburg Red Cross EOC, Westmoreland County Community College near Youngwood, and Penn State New Ken using VHF simplex. Several MT63 2k long digital messages were conveyed to all stations using only simplex communications from the Skyview Radio Society. Several of the stations, when on simplex, could not hear each other, but Skyview could hear all the stations, so our role at Skyview was to relay information to and from the stations on simplex that could not make direct contacts with each other.

The successful test of simplex operations, proved the point that we could have conducted the entire exercise under the worst possible case scenario, which would be the unlikely loss of all of our amateur radio repeaters in a single emergency event. Skyview also successfully exchanged data messages with the HF portable station manned by John Rogers (W3IW) at the Red Cross Greensburg EOC. The data was sent on 3.5835 MHz and also on 7.073 MHz and the data messages were confirmed 100% accurate at both stations. The HF operations necessitate slower data rates at half the speed that we use on simplex or repeaters, but these lower frequencies on HF allow us to reach out reliably to about 500 miles. So, in an extreme emergency situations with widespread power and telecommunications outages, we could have easily and reliably moved information in and out of an affected area.

After we were well into the exercise, it was decided that we would operate through the 147.18 MHz repeater in Greensburg so that the stations in Youngwood and the Greensburg ARC EOC could communicate without the need for relay. However, Skyview remained active in our relay role, helping to move information from the Penn State New Ken shelter and the EOC and Youngwoood with several more digital messages sent to and from Penn State New Ken through the course of the exercise. This allowed the stations at New Kenn Penn State the mobility and flexibility of operating with their hand held transceivers, rather than having to set up from their mobile stations at the higher power that would have been required to reach the 147.18 repeater in Greensburg.

From my vantage point from the Skyview Radio Society club station, the drill seemed to be very well organized and all stations were operating in very professional manor. All of our toughest obstacles were overcome... the main ones being a lack of easy radio coverage.

Through the use of better antenna and proper configuration of their stations, all those involved were able to meet the objective (from my point of view at Skyview) of accurately and efficiently sending and receiving information, both by voice and data transmissions.

In future exercises, where we might possibly be tasked with more need for detailed data communications, we would probably want to open a second channel as a primary data channel to allow for long data transmissions without interrupting our tactical voice communications channels.

I am looking forward to the opportunity to, in future drills, be pressed into service a bit more with much more information to convey with our data transfer capabilities. I would suspect that we could have easily handled 20 or 30 times the amount of data that we handled during the exercise.

I am very appreciative of Rabe Marsh (W3TNU) and all of the Red Cross leadership for inviting amateur radio to play a part in the exercise and we're looking forward to our next possible opportunity to provide emergency Amateur Radio communications in upcoming exercises or actual emergency deployments.

David Kleber, KB3FXI

At Peach Bottom drill we logged on a spreadsheet-type form. Thought about doing this on a machine,

then being able to transmit logs to net to verify reception of messages. Just a thought ...

Marty,

At WC3PO (operator W3IW) I logged all traffic in a standard ARRL log book including message ID's. I also had a printer for all digital traffic (ICS-213) as noted by Dave, KB3FXI.

Hello all,

I'll be heading up to Conneaut Lake PA for the weekend and I'll be on the air with my FT817 qrp rig. My portable qrp station does very well but it would be better if we could have someone volunteer to run the 80 and 40 nets this Sunday morning.

Please let me know here on the list if anyone is willing to pitch in as NCS.

Have a fun and safe Memorial Day weekend and don't forget to take a moment to think about all the service members who gave their lives to defend our nation and our Constitution.

4445. TS-590S Digital QuickStart -- major update to v1.2

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-05-25 16:38:53 UTC
From: Ian Wade G3NRW
Topic: 4445 Message: 4445

It seems that the original version of the TS-590S Digital QuickStart was
just a little too quick for some people! So I have now considerably
expanded it.

The main changes include:
~~~~~~
* Added explanation of VOX and CAT TX keying

* Added MixW configuration details

* Added VOX setup details for several packages

* Added requirement for Fldigi TS-590S XML file
~~~~~~

Thanks to everyone who contributed useful feedback.

The QuickStart is accessible through the TS-590S Resources Page:

http://homepage.ntlworld.com/wadei/ts-590s.htm

Scroll down to the "HOWTOs" section, then click on the link:

"TS-590S HOWTO: Digital QuickStart"

The Kaministiquia River can be seen in this Tbnewswatch.com photo on May 27, 2012.

<javascript:__doPostBack('fvStory$linkButton0','')> View larger pictures

Overnight flooding has led to states of emergency being called in both Comnee Township and Oliver Paipoonge.

Police on Monday morning issued a release stating residents in Oliver Paipoonge have been asked to remain at home because area roads have been washed out due to rain and subsequent flooding. Affected roads include Highway 11-17, Oliver Road, Twin City Crossroads, Fraser Road, Boulter Road, Poleline Road, Veley Lane, Maki Road and Mud Lake Road.

The excess water has also hit closer to home for south-ward residents, where extensive flooding has hit Northwood Ward, the Intercity area, parts of Westfort and James Street.

The railway underpass on South James Street is closed because of flooding, while most ditches in the Intercity area are overflowing and starting to cover roads.

The problem has led to several stalled vehicles on the roadway and police urge caution.

The city on Monday issued an emergency warning about the failure of the Atlantic Avenue secondary sewage treatment plant and has asked residents not to flush unnecessarily until the problem has been fixed.

Crews are on scene at the plant, but the portion that pumps sewage into the facility is underwater. A media briefing on the situation is being held at 9 a.m. at North Central fire station.

On Sunday the Lakehead Region Conservation Authority announced city's flood watch was still in effect after the area received 15 to 20 millimetres of rain over the last 24 hours.

The Lakehead Region Conservation Authority issued the flood watch on Friday in anticipation of 95 millimetres of rain over the weekend. Although not much rain fell on Saturday, the area received plenty of rain the following day. An additional 30 millimetres is forecasted over the next 24 hours with an additional 10 to 15 millimetres along with thunderstorms.

The flood watch is in effect for Thunder Bay, the municipalities of Neebing, Oliver Paipoonge, Shuniah and the townships of O'Connor, Conmee, Gilles and Dorion.

The city and surrounding communities have already absorbed up to 65 millimetres of precipitation in the past 24 hours and it's only the good fortune of a dry winter that Thunder Bay's rivers and lakes haven't overflowed their banks.

LRCA chairman Bill Bartley said in a release to media that area watercourses have declined but will rapidly rise if heavy precipitation occurs. The lower Kaministiquia River has also declined but could still flow over, he said.

In Thunder Bay, the Neebing-McIntryre Floodway has since stopped diverting flows but is expected to start up again overnight.
Bartley said the public is advised to continue to exercise caution around area watercourses as they may rise quickly.

Authority staff will continue to monitor conditions as part of its flood forecasting and warning program.

The flood watch is expected to last until Monday.

4453. fldigi.exe Application error

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-05-28 18:55:48 UTC
From: Fred VE3FAL
Topic: 4453 Message: 4453

I shut down all my computers last night during our thunderstorm, did a proper shut down of the laptop.

I just went to start it and get the error listed above and says "The application was unable to start correctly (0x0000005).Click OK to close the application.

This is the first time I had this happen to me..

Just did a google check for this error but see other errors similar but not the same for some of the older issues.

I attempted to reload the software but get same error..

Ideas???

Fred

Fred...

Had that problem myself a few times...

Seems it happened only when I booted up w/o all of the interface cables plugged in at the proper time(s) es not shutting down w/ proper sequence.

Chris,

All the years we've been going to Conneaut, I've still not gone there yet. We were going to go one evening but the line was too long. I heard they're really good, though.

Hello all,

I'll be heading up to Conneaut Lake PA for the weekend and I'll be on the air with my FT817 qrp rig. My portable qrp station does very well but it would be better if we could have someone volunteer to run the 80 and 40 nets this Sunday morning.

Please let me know here on the list if anyone is willing to pitch in as NCS.

Have a fun and safe Memorial Day weekend and don't forget to take a moment to think about all the service members who gave their lives to defend our nation and our Constitution.

Sent: Wednesday, May 30, 2012 8:24 PM
Subject: [ny-nbems] EC-NBEMS Announcement

With the hurricane season officially starting June 1st, we are going
to be maintaining a liaison between the NY-NBEMS/US-east NBEMS groups
and the Eastern Caribbean NBEMS group on 7.036 / 1000 waterfall. Any
hurricane related traffic will have priority on this frequency while
stateside amateurs can act as relays and alternate net control ops.

To: All Amateurs
From: J73WA
Date: 2012-05-27
Time: 1213L
Subject: EC-NBEMS

Hello all

We are pleased to inform you of the launching or the new Eastern Caribbean Emergency Messaging System (EC-NBEMS) net. This net will convene every Sunday at 21:00 UTC on 7.036 USB using Olivia 8/500 for general check-ins and MT63-1000 for passing messages.

The purpose of the net is to pass amateur radio traffic and act as a training ground for Caribbean amateurs in the use of the narrow band messaging system.

For the purpose of this net, the Eastern Caribbean was divided into three sections: Section One - St. Kitts/Nevis to Puerto Rico, Section Two - St. Lucia to Antigua and Section Three - Trinidad & Tobago to Barbados. DX stations are invited to participate and will be called and acknowledged during the net.

All information about the net will be posted on the CEWN's website at http://cewn.net. Please register on the site and be sure to subscribe to the EC-NBEMS mailing list.

For the smooth operation of the net and ensure full participation, we strongly encourage all net participants to download the latest versions of FLDigi, FLWrap and FLMsg from the CEWN website.

You are invited to join us every Sunday and participate by checking in and sending a message even if it is only for practice purposes.

The EC-NBEMS will work closely with the East Coast NBEMS Net in times of emergency especially during the hurricane season.

4459. FLARQ

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-05-31 19:50:14 UTC
From: KB3FXI
Topic: 4459 Message: 4459

Hello all,

It has been a long time since I've seen any reports of FLARQ testing.

In anticipation of possibly getting some new higher speed modes in the FLDIGI modem set, I'd like to revisit FLARQ for the purpose of bulk message, point to point, data transfers.

Unlike the forward error correction (FEC) modes we're most used to using (Olivia and MT63), FLARQ is a one to one ack/nak connection. We have done some successful testing with Winmor 1600 hz for bulk message hand offs but we'd much prefer keeping our operations to one software suite. And NBEMS has the big advantage of cross OS platforms which Winmor currently does not have (windows only).

If anyone within the NVIS range (300 mile radius or so) of me would like to give FLARQ a try, please drop a line here on the list and we can set a sked.

I'd like to test with PSK250R and PSK500R.

Dave

I have 3.21.41 installed on a Dell Inspiron laptop with FLMSG 1.16.
Next is to get cabled up. Probably with the Argo V, and if necessary,
a small amp at 50 watts out.

From: Andrew O'Brien
Topic: 4459 Message: 4465

By coincidence I did quite a bit of FLARQ testing last night on 60M after having an unsuccessful night of tests with Winmor on 60M the previous day. Despite conditions where me and my Texas partner could carry out a QSO with regular Olivia mode, we were never able to get FLARQ to detect a FLARQ beacon even when using the same Olivia modes that worked OK for a regular QSO. Same thing when issuing a FLARQ connect command. It reminded me of the old FLARQ alpha testing days when things did not work too well.

Ok, Andy... 60m to Texas is quite a haul and I don't think (I hope) that we're likely to have a situation where we have to do a bulk message hand off at that distance.

We'll see how we do with the PSK R modes on NVIS short skip comms.

Hello all,

It has been a long time since I've seen any reports of FLARQ testing.

In anticipation of possibly getting some new higher speed modes in the FLDIGI modem set, I'd like to revisit FLARQ for the purpose of bulk message, point to point, data transfers.

Unlike the forward error correction (FEC) modes we're most used to using (Olivia and MT63), FLARQ is a one to one ack/nak connection. We have done some successful testing with Winmor 1600 hz for bulk message hand offs but we'd much prefer keeping our operations to one software suite. And NBEMS has the big advantage of cross OS platforms which Winmor currently does not have (windows only).

If anyone within the NVIS range (300 mile radius or so) of me would like to give FLARQ a try, please drop a line here on the list and we can set a sked.

I'd like to test with PSK250R and PSK500R.

-Dave, KB3FXI

Ok, Gary!

Do you have anything going on tonight. We could try 80m if that works for you.

By coincidence I did quite a bit of FLARQ testing last night on 60M after having an unsuccessful night of tests with Winmor on 60M the previous day. Despite conditions where me and my Texas partner could carry out a QSO with regular Olivia mode, we were never able to get FLARQ to detect a FLARQ beacon even when using the same Olivia modes that worked OK

for a regular QSO. Same thing when issuing a FLARQ connect command. It reminded me of the old FLARQ alpha testing days when things did not work too well.

Dave

I have 3.21.41 installed on a Dell Inspiron laptop with FLMSG 1.16.
Next is to get cabled up. Probably with the Argo V, and if necessary,
a small amp at 50 watts out.

Dave, dont know if you got my last transmission. My comment was when you hit connect and it makes the attempt, then with no connect, the timer starts. It seems like there is 5 seconds between 1 sec ticks on the timer.

If it makes you feel better, I cant connect to Andy either HIHI.

73,
Gary- kc8yjj

My problem is that FLARQ is not triggering FLDIGI and I can't even transmit a bulletin or connect to your call from the beacon, which did show up once or twice in the call sign window.

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-06-01 01:54:29 UTC
From: Fred VE3FAL
Topic: 4459 Message: 4480
Attachments: 1 described; binary payloads are missing from this source WARC

I thought the beacon had to be off to connect..

I remember something like that way at the beginning when we started playing with this...

I could be wrong though.

Dave, last night I had NO problem triggering FLARQ from Fldigi but did
have an issue tonight. I closed FLARQ and re-opened and it worked. I used
to test all this with Skip in the old days but have forgotten a lot.

Gary and I had two good email transfers at PSK250

Dave, dont know if you got my last transmission. My comment was when you hit connect and it makes the attempt, then with no connect, the timer starts. It seems like there is 5 seconds between 1 sec ticks on the timer.

If it makes you feel better, I cant connect to Andy either HIHI.

73,

Gary- kc8yjj

4484. FLARQ

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-06-01 02:44:43 UTC
From: Fred VE3FAL
Topic: 4459 Message: 4484

Ok, was able to connect with Andy K3UK, but I forgot how the heck to talk to him, and when I did we somehow lost our connection. I did notice the countdown timer not working and is actually stalling when I want to or wish to try a reconnect. We connected once and the diamond was green, so that is a good thing, we were able to talk on FLDIGI as well..Numerous connect attempts after that failed.

I am running W7 and the latest version of FLDIGI.

Dave, something I noticed. When I was connected to Andy, and typing in the plain talk box, I could send something and it would just sit there, then all of a sudden it would send, maybe minutes of wait. I turned on the squelch, ever so little, it began to send as soon as I hit enter. Is it possible FLARQ waits for a quiet channel before it sends?

Settings are all at their defaults, except for the Beacon Interval, I dropped that to 60 seconds, it was at 900.

By coincidence I did quite a bit of FLARQ testing last night on 60M after having an unsuccessful night of tests with Winmor on 60M the previous day. Despite conditions where me and my Texas partner could carry out a QSO with regular Olivia mode, we were never able to get FLARQ to detect a FLARQ beacon even when using the same Olivia modes that worked OK for a regular QSO. Same thing when issuing a FLARQ connect command. It reminded me of the old FLARQ alpha testing days when things did not work too well.

Dave

I have 3.21.41 installed on a Dell Inspiron laptop with FLMSG 1.16.
Next is to get cabled up. Probably with the Argo V, and if necessary,
a small amp at 50 watts out.

Subject: [paNBEMS] FLARQ

Hello all,

It has been a long time since I've seen any reports of FLARQ testing.

In anticipation of possibly getting some new higher speed modes in the FLDIGI modem set, I'd like to revisit FLARQ for the purpose of bulk message, point to point, data transfers.

Unlike the forward error correction (FEC) modes we're most used to using (Olivia and MT63), FLARQ is a one to one ack/nak connection. We have done some successful testing with Winmor 1600 hz for bulk message hand offs but we'd much prefer keeping our operations to one software suite. And NBEMS has the big advantage of cross OS platforms which Winmor currently does not have (windows only).

If anyone within the NVIS range (300 mile radius or so) of me would like to give FLARQ a try, please drop a line here on the list and we can set a sked.

I'd like to test with PSK250R and PSK500R.

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-06-01 16:53:39 UTC
From: David Kleber
Topic: 4489 Message: 4489

I think our problems last night were due to open software squelch and AFC activated on the software.

Here's an exchange from the NBEMSham yahoo group.

-Dave, KB3FXI

Bingo! Beacon is working fine now with the software squelch on!
I wish I would have thought of that last night.

Dave (w1hkj), with FLARQ I think it would be advisable to not run software AFC or RSID (TXID), would this be correct?

Dave,

You nailed it! I had squelch wide open because I didn't want to miss the beacon from the other station since there was a bit of fading and static crashes.

I'm ready and raring to go on another test now. I'll let you know if I'm able to at least send a beacon with the squelch up and on.

>
> I'm wondering if there might be something to that busy detect idea.
Were you running fldigi with the squelch full open? The beacon will NOT
transmit if Rx signal activity is detected. On most modes that will be
the case if you disable the squelch button on fldigi.

The same condition can occur when connected if you are running fldigi
with the squelch either open or set too low.

Confirmed this on Linux, Windows and OS X

Dave

Hello all,

I'm going to be hanging on 7.072, 1500 Hz center, with a FLARQ beacon using PSK250R until about 6pm and then I'll be switching to 3.5835 USB, 1000 Hz center and beaconing there on PSK250R.

Make sure you have your software squelch on and up a bit and don't transmit video ID. Also, disable RSID (TXID) and ALC in the FLDIGI software. Make sure you are using the PSKR mode 250, not to be confused with BPSK-250.

Please jump on and give me a try.

4497. Radio today - FLARQ and then a Tornado

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-06-02 00:26:27 UTC
From: David Kleber
Topic: 4497 Message: 4497

I managed to make a nice connection with KC8YJJ, Gary, in Ohio today from home on FLARQ. We had a very solid path on 7.072 on PSK250R, so we switched to PSK500R and transferred a couple of good size text files with great success. I think we had only one resend in the ack/nak as a result of a double with another station.

The big key on FLARQ definitely winds up being having the FLDIGI software squelch on and the AFC off.

At around 5:30pm there was a tornado warning issued for Westmoreland and Indiana counties in WPA. I jumped off HF and checked in on the Indiana co 2m repeater and read the tornado warning there then went to 442.275 which is one of the back up repeaters in Westmoreland county for the 145.15 machine which is currently down.

Even though I was out of the county in the warning area, I offered up my assistance as telephone relay to the Pittsburgh National Weather Service. As NCS, it's pretty hard to run the net and make calls to the NWS.

I took a relay from the NCS from a text message report he got for a tornado touch down on Rt. 711 at the Cool Spring Restaurant which tore off their roof. I called in the report to the Pittsburgh National Weather Service and they were very thankful for the report which we had to them in about 3 minutes from the report being given on the ground.

NWS should be out for assessments in the next day or so and I'm pretty sure they'll confirm a weak tornado in the Ligoneer area. As far as I know there were no fatalities.

It was an exciting day.

4500. Second instance of FLDIGI?

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-06-03 01:09:09 UTC
From: NU3Q
Topic: 4500 Message: 4500

Hi Folks:

I am contemplating the purchase of a Signalink USB (sound card version) to run as a second interface on my IC-208H 2m/440 rig using FLDIGI since I am already maxed out on sound cards on my shack PC. I already run FLDIGI on my HF rig using my RigBlaster Plus interface. Is it possible to install a separate instance of FLDIGI to have it talk exclusively to my proposed Signalink USB interface and IC-208H?

73 for now.

Bob de NU3Q

From: Rolan O. Clark
Topic: 4262 Message: 4504

All,

Now is 8:42 Pm , Sunday June 3.

I am listening on 3.5835 WF 1000 using psk-250R and flarq

I am sending cq unproto once in a while and sending a beacon once in a while.

Give me a call if you wish, I'll probably be here for a couple of hours listening.

tnx,

73 de rolan w3fdk

4505. New TS-590S HOWTO: SSTV QuickStart

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-06-05 09:22:09 UTC
From: Ian Wade G3NRW
Topic: 4505 Message: 4505

We all know how useful the TS-590S USB port is when running digital modes. No interface unit is necessary -- you just connect the PC to the radio with a standard off-the-shelf USB cable and you're in business. It couldn't be easier!

Exactly the same applies when using the USB port for analog audio. My new HOWTO explains how to configure MMSSTV (one of the world's most popular analog SSTV packages) to work with the TS-590S. Again, it couldn't be easier.

To download the HOWTO, go to the TS-590S Resources Page:

http://homepage.ntlworld.com/wadei/ts-590s.htm

Scroll down to the bottom of the "HOWTOs" section, then click on the link:

"*** TS-590S HOWTO: SSTV QuickStart"

dear all,

I am on 7.070 +/- activity and sending a flarq beacon every few minutes.

I think I know how to connect and I think if someone calls I turn off the beacon and then put the call letter of the station calling in the connect window, type then hit enter, sort of like pactor is like.

unproto uses the bottom line for composing text then enter

I am using psk250r.

I anyone wnats to try flarq please call but i don't know for sure what i am doing. I do have the squelch set so it isn't activiated on noise.

Take care,

73 de rolan w3fdk

All,

thanks much to ac2ir and n2tif who worked trying to get some flarq comm going. I did get an flarq email to print in the top window that ac2ir sent but I am still confused about how all is supposed to work. I thought it was similar to pactor and I could connect, I think, when ac2ir was in the connect window , same as n2tif, but of course not at the same times but I couldn’t copy any msg that meant anything , mostly nothing printed on either window so I’ll read more and try later.

I ‘ll try and send a flarq cq out on 7.070 or there about of an evening if I am around and please try and connect. I will be using psk250r.

thanks much to those station who kept trying to make contact. We’ll get it.

From: Rolan O. Clark
Topic: 4262 Message: 4510

all,

Below if from flarq so I'll try bpsk250 instead of psk250r, maybe that was one thing I was doing wrong.

Flarq can be used with the following digital modem as the transport layer:

BPSK all baud rates
QPSK all baud rates
MFSK all baud rates
DOMINOEX 11 or faster (do not use FEC)
THOR all baud rates, 11 or faster recommended
MT63 - all baud rates, flarq timing should be increased to accommodate mt63 latency

Please note that Olivia IS NOT compatible with flarq transmissions. Olivia does not allow the transmission of the control codes required for flarq.

Take care,

Date: 2012-06-08 07:19:23 UTC
From: Rolan O. Clark
Topic: 4262 Message: 4512

Fred,

Thanks much, sorry, I had left the frequency by then.

I hope to be on this eve around 2300 eastern local time, 0300 gmt

I'll send out some flarq beacons around 7.070 on 1kc wf using bpsk250 and if I copy your call I'll turn off the beacon and click on connect . My squelch on fldigi will be set on but not high enough to block your signal if condx permit.

Then I'll type something in the very botton line of the flarq screen and hit enter and see what happens.

I think it works like pactor and amtor works but I don't know why I wasn't copying ac2ir or n2tif except some words and jumbled text on the fldigi screen but I did copy a message in the top flarq window that ac2ir sent.

I just now typed now is the ime k in the flarq window bottom line and hit enter and I have ear phones in the line out to hear what is happening and the below, between the ***, appeared on the fldigi screen and I heard the signal on the earphones and it does transmit that and I think that is the unproto mode when not connected. We should not have to be 'connected' to talk keyboard to keyboard and just using the bottom line and we could have round tables, I think, but there would be no ack/nak so some characters may be lost same as plain didgi with no error correction or ack/nak error correcting.
****
00tW3FDK:73 now is the ime k
****
I think it is supposed to work that way. if connected then only the two stations can work each other.

More experimenting follow and thanks to all for patience and hanging in there. Didn't mean to ignore anyone, I just tried contacting whomever showed up first.

Take care,

Hello All,

Does anyone know of a good place for operating an HF station in the outdoors (like a park) in or near Pittsburgh? I live in an apartment building so it is impossible for me to have a home station, thus the need for setting up a temporary outdoor HF station. Thanks.

73!

Jose,

Highland Park is nice. Just put a wire up in a big tree and have some fun.

Also, if you'd like to go up to Skyview Radio Society sometime, just let me know. We can go up on an off night and work the station.

rr Fred, its 9:30 local time now so I'll start calling with the beacon in about 15 minutes probably.

Thanks and any ohters please join in, if we connect then only the two stations can talk but if we aren't connected then , I think it works this way, type something in the bottom line of the flarq window and hit enter and it should send what you type unproto, no ack/nak type of thing and no error correcting.

Again I am trying bpsk250 although I read where the R modes work but I want to follow the flarq recommendations for now. I have the latest version 4.3.3. I think it is of flarq.

Thanks much Fred,

We'll see what transpires, I hope the band is open so we get good squelch action.

I will be operating HF portable from Scott Township Park tomorrow (Saturday) from 10 AM to 2 PM as part of Scott Township Public Safety Day (they invited me this evening last minute thing). Will be working HF phone only don't feel like taking my laptop. My goal is to demonstrate emergency HF phone to the masses with my Buddipole or a wire. Don't know yet which I'll use.

4524. FLDIGI and VHF FM comms

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-06-09 23:57:16 UTC
From: Fred VE3FAL
Topic: 4387 Message: 4524

Gang:
Today we had our local ARES exercise. We ran a 2 meter net on one of the local repeaters and attempted to make a few contacts via digital using FLDIGI on 2 meters. I was about 1 mile from the EOC and another fellow was about half a mile as the crow flies from me. EOC was running a Yaesu handheld, I was running the TMD700 at low power using a 5/8 wave antenna on the truck. Both Rob VA3ROM and Paul VA3PDC (EOC) said all they were getting was gibberish on teh screen and no RSID's, I was getting the same from both as well. Lori VE3VAI at the Coast Guard Station who is about 5 miles from us was copying us all 100% and had my messages open no problem.
Now, we are all wondering if anyone else has experienced issues based on distance when running NBEMS on VHF, we are going to do some experimenting with distances to see how it does affect copy, I know I was full scale at both Rob and Pauls locations.

Thoughts??

I should also add though that if I used regular PSK31 EOC was able to copy and Rob was copying 20-30% of the text. I was running the most current version and we are all running windoze7...
Also Paul at EOC said his screen was not autoscrolling too..
Did I miss anything guys, I cc'ed yous on this one...

Were you using regular connections vi a digital interface or were you all using "acoustic coupling"? We have experienced similar problems when using mic's to a speaker and the sound was reverberating around. We have also had similar situations when using linked repeaters when one repeater interpreted the signals just fine and another did not due to some DTMF muting issues. At our last major drill we had another similar situation where the EOC could not decode signals vi a repeater but I could at a hospital using the same repeater.. All three of us were about 15 miles apart.

Fred,

What mode were you running?

I'd recommend MT63 2k long on FM.

About 95% of all problems we see on decode wtih MT63 on FM are due to the sound levels on either or both tx and rx. High levels will cause problems and only EXTREMELY low audio will cause problems... so, it's always best to go with low audio levels both on your transmitted audio and on your mic or receive levels on the computer receiving side.

If you see yellow and red in the waterfall, your audio levels are way too high.

The only other thing to check is the calibration for the sound card settings.

BTW, MT63 2k long will work just as well with acoustic coupling as with a drirect interface.

Andy,

Assuming that you were running MT63, I would almost guarantee that the stations having problems had their rx or mic levels too high. The only other thing to check would be the sound card calibrations.

What mode were you running?

Were you using regular connections vi a digital interface or were you all using "acoustic coupling"? We have experienced similar problems when using mic's to a speaker and the sound was reverberating around. We have also had similar situations when using linked repeaters when one repeater interpreted the signals just fine and another did not due to some DTMF muting issues. At our last major drill we had another similar situation where the EOC could not decode signals vi a repeater but I could at a hospital using the same repeater.. All three of us were about 15 miles apart.

Some more comments, be sure squelch is low or off while rx. digi signals look like noise to squelch circuits as does over modulation and maybe the radio was ‘squelching ‘ .

Really an interesting problem and sure hope you find the answer for things we can all watch out for. That’s why we have drills to find out these things ! I am assuming that you don’t do this regularly with no problems but that this is a first time for this particular scenario?

Take care,

Fred:

Good to see your efforts using FLDIGI on VHF. In response to your inquiry about "distance" applications tested, I can report to you that here in New Jersey we have been testing FLDIGI communications at the SEOC on our 220 MHZ repeater. Tests are continuing however,and "distance" has not been an issue. I am sending and receiving FLDIGI over 70 miles with no difficulties. Testing includes text versions of Sit-Reps and other worksheet type files using MT63 2k. The purpose of this testing is to demonstrate the capabilities of FLDIGI use between 21 county EOC commands and the SEOC in West Trenton. The results thus far are impressive. Additional testing using simplex have also proven to meet realistic expectations.

Best Regards,
Bill Kelleher

From: conawayny
Topic: 4533 Message: 4533

I want to do digital Modes on Field Day using FLDIGI. (Specifically Contestia 8/250 as suggested by KB3FXI) The Club I will be working from uses N1MM Logger. I want to know if anyone has interfaced FLdigi to N1MM for logging. I know there is FLlog in the FLDIGI suite - which means that there must be "hooks" in there to connect to.
Tnx

I'm curious...

Were you all in the proper 'mode' as I *think* it can invert the tones if you are not all in USB mode in the software. If the tones are inverted, it won't decode. I'd also wondered about the polarity of your sound interfaces and if that would matter. I'm unsure of this but it's worth a look. The strange part is the CG station could decode...are you all on the same version of the software?

The input levels as suggested would be something I'd watch as well.

Also, with FM, center your tones on 1500 to ensure that none of the high pass filtering on the rigs is interfering with the signals. Some radios have very aggressive filtering that will clip out the bottom of an MT63-2k signal.

I'm not sure if there is a way to link N1MM with FLDIGI. But FLDIGI built in logging and macros should work fine for FD. You can create a custom macro set that will cover your exchange and log the contacts.

Chris,

I'm assuming that they were using FM so the USB/LSB shouldn't be an issue unless some of the stations had the "Reverse" checked on the software.

Good point on centering on 1500 Hz waterfall frequency. I would go one step further and suggest that all ops running VHF/UHF MT63 2k long go to FLDIGI, Configure, Modems, click the MT63 tab and uncheck "allow manual tuning". This will assure that all MT63 2k long ops are set and locked on 1500 Hz center.

Opening the software squelch in FLDIGI is not usually necessary, but I doesn't hurt to leave it open as long as you don't mind seeing the random characters, which really isn't an issue assuming that all the stations are using FLMSG, since the software automatically extracts and displays the messages.

Dave and all,

The FM radio squelch should not be ‘tight’ as the FM radio will see it as ‘noise’ , the same as over modulation on FM when using audio. Just another idea.

40 and 80 condx super lousy today !! or so it seems from here.

I actually run the squelch open when on FM using digi modes unless the signal is assuredly strong. I let the software decide what is and is not a signal.

This is easy... if you use Fldigi "engine" within N1MM as opposed to plain Fldigi. Just use N1MM, set-up Fldigi as your preferred digital engine, and then select Field Day in N1MM Logger and off you go. Setting up of N1MM will involve telling it the path to Fldigi. Usually N1MM defaults to MMTTY or MMVARI for digital engine status but Fldigi was added a year or two ago. I use it often in contests. The GUI that opens is different than the GUI that you will be used to seeing but you can use all the modes Fldigi supports.

I have used audio drive levels that, while I was copiable on 2 meter simplex, but made me un-copiable through the local repeater. The high levels of audio gave me a signal wider in frequency than the passband of the local repeater.

I monitor my signal on a seperate radio and reduce the audio levels until I can just begin to hear a drop in loudness.

4542. 7.073 USB this week

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-06-18 15:51:47 UTC
From: KB3FXI
Topic: 4542 Message: 4542

Hello all,

I'll be monitoring 7.073 USB this week, in and out of the shack.

Jump on and put out a call or an FLMSG message.

I'll be monitoring 8/500 olivia at 1000 Hz waterfall center but feel free to put a call out on the mode of your choice, just please remember to transmit RSID (enable TxID).

-Dave, KB3FXI

4543. w1hkj.com - NBEMS updates

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-06-18 15:57:46 UTC
From: KB3FXI
Topic: 4543 Message: 4543

Hello all,

New releases of FLDIGI, FLMSG and FLWRAP are all available for download at http://www.w1hkj.com/download.html.

I would recommend updating to the new versions.

After you download and install all the applications, remember to go to FLDIGI, config, misc, NBEMS tab and point to the new FLMSG.exe.

If anyone needs any help, feel free to post your questions here on the list and we'll be glad to give a helping hand.

-Dave, KB3FXI

Hello all,

We're going to skip the Sunday net this weekend due Field Day.

I should be around on 3.580 - 3.5835 USB or 7.070 - 7.073 USB between 10am - 11am ET. Feel free to jump on and make some digital FD contacts.

I hope all participate this weekend and enjoy the exercise.

-Dave, KB3fXI

4548. How was your 2012 FD

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-06-25 17:15:55 UTC
From: KB3FXI
Topic: 4548 Message: 4548

Hello all,

Tell us about your 2012 FD. What worked... what didn't work... what would you do different next year?

Here's the story on my 2012 FD:

I decided to work my first FD from home this year to test my emergency power capabilities.

I ran 1E (single transmitter, home station, emergency power) at about 25w on digital modes and 50w on phone. The power source used were two VRLA Powerware PWHR12280W4FR batteries in parallel to power my Icom IC-7200 and a Werker 33AH Gel to power my Acer Aspire One netbook.

I "logged" 142 contacts. I emphasis "logged" because I'm not sure how many contacts I made where I had forgot to click save (DUH!). I'm guessing I may have had 10 or so that I missed in the log.

Here's the breakdown by mode:

12 SSB/Phone
4 Olivia
2 BPSK63
124 BPSK31

I would guess that I operated actively for about 16 hours. The 2 VRLA batteries were down to about 50% according to my smart charger. The Gell was only down to about 75%.

Some of my issues were:
- On SSB/Phone, at 100W on the IC-7200, keying up with the mic caused sufficient voltage drop to shut off the transceiver, but it was okay once I dialed the power down to 50w.
- Using the same USB Signalink that I usually use with my home computer and the IC-7200, I was only able to drive the 7200 at about half the power out than I do with my home computer when I was using the Net Book. I had to jack the TX knob (transmit audio volume) almost all the way up just to get 25w out. I still haven't figured that one out.
- I expected to put LESS of a dent in the two VRLA batteries.
- When running the Net Book, I'm doomed without reading glasses!

A few observations on FD digital ops:
- I was amazed at how few stations were confirming my report. I think that it should ALWAYS be common practice (except when sending FLMSG data that is checksum confirmed accurate) that each operator report back to the other station their info.
- It's darn near impossible to solicit contacts on anything other than PSK31. I was putting out a significant number of calls on Contestia, MFSK16 and PSK63 with little or no response.
- 20m was very cluttered and nonproductive, at least for my station. There were so many doubles with stations trying to complete their contacts that it was hard to find a station

calling CQ.
- 40m PSK31 was my most productive band/mode, accounting for 96 of my 142 contacts.

This year I had a brand new Honeywell (Generac) 800 watt generator to power my station. The generator is 120 volts only, so I used it to power my Alinco 35 amp power supply which also keeps a large AGM (gell cell) battery charged. (In general, this is not a good idea...hooking your power supply directly up to a battery, but I have done it with the Alinco and ilt has survived for years).

I started out running the radio, a tower computer and big monitor, and my AL600 amp with the generator. I intended to run the amp at about 120 watts in digital modes. Whenever I keyed up the amp, the voltage would take a momentary dip and that would be enough for the computer to shut down. I thought "I can fix that" so I hooked up my 400 watt inverter to the system and connected the computer to that. I figured the battery would hold up long enough for the computer to recover. And it did. But...the inexpensive little inverter made so much r.f. noise that some bands were unusable. So, I had to settle for 100 watts ssb and 35 watts digital.

On the waterfall, it looked like sharp lines every 120 hz. This was made by the generator, and I suspect it is arcing, but I have no idea how to investigate the cause of that.

Our group here in GA, the Butts County Emergency Communications Auxiliary, operated a 2A station. It was our first ever Field Day. We operated for 20 hours, packing up on Sunday after we hit the 500 QSO mark. It was our intention to operate a digital station occasionally however we had some difficulties (Thanks Murphy!) and never made any digital contacts except for the passing of the "SM bonus message" via RMS Express through a local packet station, AJ4GU.

We had 16 of our 30 members participate (11 operated), a visit by our EMA Director, KJ4TVO, and a family picnic. Not bad for beginners. Hopefully, we set the hook a little deeper for some of our new folks.

We will probably be back next year with as a 3A operation, adding a full-time digital station.

Dave,

Generators and inverters can produce some noise for sure. Some do sawtooth signwaves that put out a mess of noise. I had a Dell notebook and a cheep 300w inverter many years ago that gave me the same result on my waterfall.

I now have a universal Kensington AC/DC converter that uses exchangeable tips for different laptops. It has an AC plug and a DC input plug that I hacked with a powerpole adapter and it is very clean. The downside is that it was about $180 but that was 6 years ago and I have been able to get adapters for the 2 different laptops I've had since. So, it didn't wind up being a bad investment at all.

I wonder if there are any ways to filter the power to clean it up? Maybe someone on the list knows.

Buzz,

Good deal on your groups' first FD!

About 3 years ago I was going to run 100% digital station in the Field but didn't have a wired mouse. It wound up that RF scrambles the capacitive touch pads on laptops and I was only able to EEK out ONE contact... that was a "Buzz Kill" (pardon the pun)!

But, that's what any of these emcomm exercises are all about.

If you watch my youtube video that I just posted in a message to the list a few minutes ago, you should see the wired mouse of my netbook with a ferrite choke... lesson leaned!

BTW, that's great that you had an EMA official at your site.

I know this is a digital group, and I hate to say this, but I didn't make any digital contacts on this Field Day!!

I also was at the home QTH this year, running class 1E. I used the shack computer, and accidentally unplugged the USB to serial converter. This caused Windows to 'forget' where the drivers were, and I couldn't find the driver disk!!

I usually run 95% digital during the year anyway, so I decided to just run voice, for a change.

Anyway, I recently redid my emergency power system. I picked up a All Power American 1000 watt 2 cycle generator from Northern Tool and a APC Line-R 1200 power conditioner. I ran my Alinco DX70 HF at 100 watts and my Kenwood D700 voice/APRS radio at 50 watts on this with no problems.

The only noise interference I found on HF was if I put the generator within about 25 feet of the antenna...then I got a bit of ignition noise on 15 meters (but it was very light and caused no reception problems).

I made 193 contacts in about 18 hours of operation...lost a little bit of sleep doing that :)

I was very pleased with the new generator/conditioner combination. According to the manual, the generator should run 8 hours at 1/2 load on 1 gallon of gas. When I checked it after 8 hours, I had only used 1/2 gallon of gas...I estimate that I used (in 18 hrs of operation) 3/4 gallon of gas at the most.

What would I do different?:

1) use the other laptop that I have (for which I have the drivers to run the USB/serial adaptor handy!!)(it also draws less power, too which might make the fuel last a bit longer).

2) run more digital modes...or at least try to (it sounds like some of the bands were pretty busy)

3) remember to use my headphones...about 3/4 of the way through Field Day I remembered to start using my communications headphones!!

I found that 40 meters was THE band to be on...seemed like most of my contacts were on that band. It was, at times, packed with stations.

On 20 meters, it seemed like everytime I called someone they either A) they faded out or B) someone with a really, really strong signal would

pop up right next to them, wiping them out!!!

80 meters was pretty good too, and 15 was in and out. I didn't hear anything on 10 meters, and for the first time in my long Field Day history, I didn't hear anything on 2 meters FM!! (usually I hear a few stations).

Thanks for the report, Darrell.

It sounds like you had a good test of the new generator and I'm glad that went well.

40m was definitely best on digital, too. It was a shame that 10m was completely dead, at least here at my station. I was really hoping to work some SSB/Phone there and some digi, too. 20m always seems to be a cluster, especially on FD. I was amazed at all the stations piled up on top of each other with PSK31 with tons of doubles and stations struggling to get their reports. It was really non-productive. I was also amazed that only a handful of folks were running PSK63 up above the 14.070 spot. The EU ops have all figured out that for contesting BPSK63 and BPSK125 are much better for the short exchanges. I hope that next year we'll see more in the way of PSK63 and some of the other narrow FEC modes like BPSK125, PSK-125R, Contestia 4/125, Contestia 8/250 and MFSK 16.

I was hoping to get my pop up camper out this year but I'm working through some mind-boggling lighting problems with my right rear break light. At least now know that my dual VLGA batteries will take me through the event with no problem. So, there's always next year and, as always, a lot was leaned this year.

4556. New UK 60m Band Utilization Chart

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-06-26 14:16:39 UTC
From: Ian Wade G3NRW
Topic: 4556 Message: 4556

You may have already seen my Band Utilization Charts for 30m and 160m.
Well, I have now produced a version for the UK 60m Band:

http://homepage.ntlworld.com/wadei/UK_60m_band_utilization.htm

If you spot any errors or omissions, or have any suggestions on how to
improve the chart, please let me know.

Thanks.

GM,
We were N6FRG 7A SJV from MT Reba, Bear Valley, CA. Returning to this site after being forced out last year with too much snow remaining we were greeted with cold windy weather, low 50s days, 36 nights, berr.

I am very proud of out group. There were 9 camps so to speak, one was VHF on 6 SSB, the other 8 were HF Phone, Digital and CW, only seven on the air at any one time. We had 325 CW, 78 Digital, and 393 Phone contacts for a Total QSO Points of 1199. We used N3FJP Field Day Network Log 2.5 and 2 Linksys wireless routers each powered by a 12v automotive battery.

Stations were powered by generator, battery and solar, not much solar. fldigi was used for digital. (It would be nice if fldigi would populate the Call entry in Log 2.5) There were about 15 licensed hams and probably around the same number of visitors. We had barrel chicken as main for our 5 PM pot luck. Too bad it was so cold out. Many of us were operating from RVs but not all.

I sent the Section Manager message with RMS Express and also sent and received about 20 other WL2k messages on 2m packet and HF.

One of the visitors was the Undersheriff of Alpine Co. and we are making plans for him joining us next year with their emergency vehicle.

Most of my stuff is unpacked, fixed and put away. Ra

We had a great, successful time; I'm glad you asked.

Ken Sanders - AE6LA
President, Calaveras Amateur Radio Society
Fowler Peak Repeater Group - 145.170, Angels Camp
PO Box 2602, Arnold, CA 95223

Hi,

I was the band captain of the 80ssb station at the W4IY Woodbridge Amateur Radio club in Virginia (9A).
That being said my station had the use of a small 2.2 generator. The small generator was used Friday night
to copy the ARRL bulletin in PSK31 on 80 meters. W4IY had a dedicated digital station that made about 270 contacts across 3 bands. My station on 80 cleared 415 contacts with the band closing around 8 am Sunday.
My station consisted of a Icom 7200 with IT-100 tuner and Heil Pro Headset. The headset was useless because
the 40 meter station was coming thru loud and clear...however the rig speaker worked just fine thus copied the stations with the main gen-set noise in the back round (30kw trailer mounted about 400ft away). (For the ic7200 crowd I know about the head phone jack mod and it was only done for external speaker jack in the rear of the radio but have not tested it out with the head phones before field day.) My antenna was a (T2FD) folded dipole up about 40 ft between AB77 towers. Performance of the antenna was fair with SWR about 1.5 to 2 (I was disappointed that swr was not lower but.....) On 80 meters I did get to the west as far as MT. I was in a tent and it was hot!

Chuck,

Thanks for the contact!

20120623 203127 203342 W4IY 7.070935 PSK31

I got the ARRL bulletin on 40m and what looked to be perfect copy on all 3 modes (RTTY, BPSK31 and MFSK16).

Thanks for the report, Chuck.

Dave,

Thanks for the youtube post of your field day set up. What was the AH capacity of your batteries in the garage? What kind of batteries were they, the design, marine, agm (absorbed gas mat}, gel, lead acid or other kinds.

You probably never came close to using the capacity.

I purchased a linear dc-ac converter for using my laptop and being a linear 115 v rms supply there is no interference on any hf band with the unit sitting next to the TS-50 on the same table. I keep in in the laptop carrying case if I need to grab and go.

Take care,

In addition to club activities, I operated 1D from home about 4 hours each day and logged 88 contacts on 20m phone, and 1 contact on 2m phone. The latter was my first excursion into VHF SSB.

After the local traffic net, where Field Day stations sent ten radiograms for bonus points plus one to the Section Manager, a buddy & I made a schedule to meet on simplex frequency and it was my first contact on 2m using something other than FM.

No digital contacts, didn't really think to try since I had such poor luck with digital modes in our state QSO Party this year (after doing quite well the year before). Field Day was a lot of fun though staying constantly busy for almost 24 hours does take a toll on the body.

4571. EmComm activities

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-08 02:27:55 UTC
From: KB3FXI
Topic: 4571 Message: 4571

Hello all,

We're here to talk about how we can train wiht and use NBEMS for Amateur Radio Emergency Communications. On some other news groups, there have been many discussions on recent activations (or lack thereof) after the storms that knocked out power to many areas in the Eastern US.

There have been comments from folks expressing their disappointment with the lack of official activations from served agencies and others who have posted accounts of their activations.

One thing seems clear... there are some diverse situations we're all dealing with relating to served agencies.

I'd like to point out some of the areas where, just about no matter where you are, we can all make a difference.

SKYWARN:

I've never heard of a situation where the National Weather Service has refused to embrace the volunteer work and value that amateur radio provides.

We had a Severe Thunder Storm warning issued in the Greater Pittsburgh Area on July 4, so I jumped on the designated SKYWARN repeater for my county to activate a net, even though the situation didn't look all that bad at first. Then, the storm really gained strength, much to my surprise (that's why we have meteorologists). I called in about 8 hail reports to the meteorologists at the PGH NWS office and they were GREATLY appreciative. Also, running a net like this is great experience.

My hope is to one day have the opportunity to introduce the PGH NWS office to NBEMS comms where they could monitor our reports with NBEMS/FLMSG.

HEALTH AND WELFARE

In areas where there is little or no coordination with official served agencies, there's no reason for us to just sit on our hands and do nothing if we're not officially called out.

I AM NOT SUGGESTING THAT ANYONE SELF DEPLOY TO EMERGENCY SCENES.. but, why not fire up a net and give road / traffic reports such as impassable or closed roads, structural damage reports, or just check in with your fellow hams to see if we're all okay?

Furthermore, if you're in the aftermath of an emergency situation where phone and power are interrupted, and you have secured you're family members and home, why not go to your neighbors and let them know that you would be glad to pass a "we're okay" health and welfare report?

There is an amazing disparity, even within areas such as the Greater Pittsburgh area, where County EMA's and other served agencies regularly call up and welcome Amateur Radio

volunteers, while others will have nothing to do with Amateur Radio.

On the surface, this seems unjust, but, quite often there are legitimate reasons for some of the served agencies' reluctance to reach out to Amateur Radio volunteers... usually as a result from past negative experiences (which are very hard to overcome). Some potential served agencies are simply unaware of our capabilities.

So, my advice is for us to continue to train, practice and help when and where we can.

I really believe that NBEMS/FLDIGI/FLMSG is a game changer. We just need to keep moving forward and take every opportunity to present the value that we can add during emergency situations.

Any thoughts or comments are welcome here on the list... please don't post replies to my privately... I'd much rather prefer an open, congenial discussion here on the list. Let's focus on the positive, rather than the negative.

Fire away!

-Dave, KB3FXI

Topic: 4571 Message: 4572

I have been involved with Emcomm for many years as a volunteer. I have seen and experienced much.

Dave is absolutely correct when he mentions that we need to be proactive and train for EmComm with Digital software. It has not gone unnoticed that many appointed leaders in some EmComm groups and served agencies have agendas that represent interests that may not necessarily represent the public's or that of amateur radio. Along with complacency, this is something that I have noticed lends to much of the lack of training and organization with some groups.

I have resigned myself to organize and train amateurs for public emergency service with a fundamental recognition for the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.

Serving the Public is what is called for. The served agencies serve the public too, but in a different way. Make sure you know who you are serving and why. Compensation given to you in any way for your amateur radio communication services is prohibited.

Sound familiar? It is Part 97.

Self deployment should not be the first option. This does not mean you cannot monitor, check into, or start up a net. The best way to use EmComm is to be able to be part of the communications process. In other words, become familiar with the process and use of emergency tools such as knowing where to tune on HF during a telephone outage that is statewide or operating a net on simplex.

If you are involved with EmComm, you should well be familiar with how and where to pass radiograms. It does NOT have to be an emergency to start up a net. Just about any excuse will do. For instance, if your county tests the sirens once a month, create a scheduled net around that. It will be a good opportunity for any inexperienced ham to get a taste of running a net without being in an emergency situation. This is the perfect time to make mistakes and offer encouragement.

NBEMS/FLDIGI/FLMSG is really THE game changer. Its capabilities are something that are far reaching and flexible enough to allow for both HF and VHF/UHF communications. In so much as they are efficient and user friendly, they should be considered especially for EmComm use.

The local club that I am affiliated with www.tmrahamradio.org has spent many Sunday evenings getting local hams on board with the use of FLDIGI and the use of the digital software. It takes extra effort

to teach but it is worth the time and effort because, if they are needed they can do! We are in the process of trying to find a time slot to have a local VHF FLDIGI net. The important thing is to practice and share information.

Thanks for listening.

Steve / W8TER / AAR5KQ

Hello all,

We're here to talk about how we can train wiht and use NBEMS for Amateur Radio Emergency Communications. On some other news groups, there have been many discussions on recent activations (or lack thereof) after the storms that knocked out power to many areas in the Eastern US.

There have been comments from folks expressing their disappointment with the lack of official activations from served agencies and others who have posted accounts of their activations.

One thing seems clear... there are some diverse situations we're all dealing with relating to served agencies.

I'd like to point out some of the areas where, just about no matter where you are, we can all make a difference.

SKYWARN:

I've never heard of a situation where the National Weather Service has refused to embrace the volunteer work and value that amateur radio provides.

We had a Severe Thunder Storm warning issued in the Greater Pittsburgh Area on July 4, so I jumped on the designated SKYWARN repeater for my county to activate a net, even though the situation didn't look all that bad at first. Then, the storm really gained strength, much to my surprise (that's why we have meteorologists). I called in about 8 hail reports to the meteorologists at the PGH NWS office and they were GREATLY appreciative. Also, running a net like this is great experience.

My hope is to one day have the opportunity to introduce the PGH NWS office to NBEMS comms where they could monitor our reports with NBEMS/FLMSG.

HEALTH AND WELFARE

In areas where there is little or no coordination with official served agencies, there's no reason for us to just sit on our hands and do nothing if we're not officially called out.

I AM NOT SUGGESTING THAT ANYONE SELF DEPLOY TO EMERGENCY SCENES.. but, why not fire up a net and give road / traffic reports such as impassable or closed roads, structural damage reports, or just check in with your fellow hams to see if we're all okay?

Furthermore, if you're in the aftermath of an emergency situation where phone and power are interrupted, and you have secured you're family members and home, why not go to your neighbors and let them know that you would be glad to pass a "we're okay" health and welfare report?

There is an amazing disparity, even within areas such as the Greater Pittsburgh area, where County EMA's and other served agencies regularly call up and welcome Amateur Radio volunteers, while others will have nothing to do with Amateur Radio.

On the surface, this seems unjust, but, quite often there are legitimate reasons for some of the served agencies' reluctance to reach out to Amateur Radio volunteers... usually as a result from past negative experiences (which are very hard to overcome). Some potential served agencies are simply unaware of our capabilities.

So, my advice is for us to continue to train, practice and help when and where we can.

I really believe that NBEMS/FLDIGI/FLMSG is a game changer. We just need to keep moving forward and take every opportunity to present the value that we can add during emergency situations.

Any thoughts or comments are welcome here on the list... please don't post replies to my privately... I'd much rather prefer an open, congenial discussion here on the list. Let's focus on the positive, rather than the negative.

Fire away!

Fantastic comments, Steve. And thanks for checking in on the net this morning!!!

I would like to see more groups practicing with health and welfare NTS messages and make it challenging. For instance, how about an NTS practice net where a few stations attempt to send bulk messages... like 30 or more.

Subject: Re: [paNBEMS] EmComm activities

I have been involved with Emcomm for many years as a volunteer. I have seen and experienced much.

Dave is absolutely correct when he mentions that we need to be proactive and train for EmComm with Digital software. It has not gone unnoticed that many appointed leaders in some EmComm groups and served agencies have agendas that represent interests that may not necessarily represent the public's or that of amateur radio. Along with complacency, this is something that I have noticed lends to much of the lack of training and organization with some groups.

I have resigned myself to organize and train amateurs for public emergency service with a fundamental recognition for the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.

Serving the Public is what is called for. The served agencies serve the public too, but in a different way. Make sure you know who you are serving and why. Compensation given to you in any way for your amateur radio communication services is prohibited.

Sound familiar? It is Part 97.

Self deployment should not be the first option. This does not mean you cannot monitor, check into, or start up a net. The best way to use EmComm is to be able to be part of the communications process. In other words, become familiar with the process and use of emergency tools such as knowing where to tune on HF during a telephone outage that is statewide or operating a net on simplex.

If you are involved with EmComm, you should well be familiar with how and where to pass radiograms. It does NOT have to be an emergency to start up a net. Just about any excuse will do. For instance, if your county tests the sirens once a month, create a scheduled net around that. It will be a good opportunity for any inexperienced ham to get a taste of running a net without being in an emergency situation. This is the perfect time to make mistakes and offer encouragement.

NBEMS/FLDIGI/FLMSG is really THE game changer. Its capabilities are something that are far reaching and flexible enough to allow for both HF and VHF/UHF communications. In so much as they are efficient and user friendly, they should be considered especially for EmComm use.

The local club that I am affiliated with www.tmrahamradio.org has spent many Sunday evenings getting local hams on board with the use of FLDIGI and the use of the digital software. It takes extra effort to teach but it is worth the time and effort because, if they are needed they can do! We are in the process of trying to find a time slot to have a local VHF FLDIGI net. The important thing is to practice and share information.

Thanks for listening.

Agree with most points, however, I would be concerned about becoming a source of "official information" (road closures)

without being an activated resource. I found out through the recent flooding this was critial information and was changing

rapidly.

Emergency officials are becoming too reliant on cell phone and internet . We need to help them address this and show alternatives.

We need to be ready to integrate with new systems (WEBEOC), whatever, to provide reliable, accurate communications capability.

Steve,

I'm not a big fan of the canned/spam messages on the NTS system which is the main reason we've not sought the official NTS net status for paNBEMS. However, I'd still like to see someone in NTS do a test exercise for moving MASSIVE amounts of traffic, maybe on a national basis. I'm sure a lot would be learned in the process.

Along with complacency, this is something that I have noticed lends to much of the lack of training and organization with some groups.

I have resigned myself to organize and train amateurs for public emergency service with a fundamental recognition for the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.

Serving the Public is what is called for. The served agencies serve the public too, but in a different way. Make sure you know who you are serving and why. Compensation given to you in any way for your amateur radio communication services is prohibited.

Sound familiar? It is Part 97.

Self deployment should not be the first option. This does not mean you cannot monitor, check into, or start up a net. The best way to use EmComm is to be able to be part of the communications process. In other words, become familiar with the process and use of emergency tools such as knowing where to tune on HF during a telephone outage that is statewide or operating a net on simplex.

If you are involved with EmComm, you should well be familiar with how and where to pass radiograms. It does NOT have to be an emergency to start up a net. Just about any excuse will do. For instance, if your county tests the sirens once a month, create a scheduled net around that. It will be a good opportunity for any inexperienced ham to get a taste of running a net without being in an emergency situation. This is the perfect time to make mistakes and offer encouragement.

NBEMS/FLDIGI/FLMSG is really THE game changer. Its capabilities are something that are far reaching and flexible enough to allow for both HF and VHF/UHF communications. In so much as they are efficient and

user friendly, they should be considered especially for EmComm use.

The local club that I am affiliated with www.tmrahamradio.org has spent many Sunday evenings getting local hams on board with the use of FLDIGI and the use of the digital software. It takes extra effort to teach but it is worth the time and effort because, if they are needed they can do! We are in the process of trying to find a time slot to have a local VHF FLDIGI net. The important thing is to practice and share information.

Thanks for listening.

Steve / W8TER / AAR5KQ

Subject: [paNBEMS] EmComm activities

Hello all,

We're here to talk about how we can train wiht and use NBEMS for Amateur Radio Emergency Communications. On some other news groups, there have been many discussions on recent activations (or lack thereof) after the storms that knocked out power to many areas in the Eastern US.

There have been comments from folks expressing their disappointment with the lack of official activations from served agencies and others who have posted accounts of their activations.

One thing seems clear... there are some diverse situations we're all dealing with relating to served agencies.

I'd like to point out some of the areas where, just about no matter where you are, we can all make a difference.

SKYWARN:

I've never heard of a situation where the National Weather Service has refused to embrace the volunteer work and value that amateur radio provides.

We had a Severe Thunder Storm warning issued in the Greater Pittsburgh Area on July 4, so I jumped on the designated SKYWARN repeater for my county to activate a net, even though the situation didn't look all that bad at first. Then, the storm really gained strength, much to my surprise (that's why we have meteorologists). I called in about 8 hail reports to the meteorologists at the PGH NWS office and they were GREATLY appreciative. Also, running a net like this is great experience.

My hope is to one day have the opportunity to introduce the PGH NWS office to NBEMS comms where they could monitor our reports with NBEMS/FLMSG.

HEALTH AND WELFARE

In areas where there is little or no coordination with official served agencies, there's no reason for us to just sit on our hands and do nothing if we're not officially called out.

I AM NOT SUGGESTING THAT ANYONE SELF DEPLOY TO EMERGENCY SCENES.. but, why not fire up a net and give road / traffic reports such as impassable or closed roads, structural damage reports, or just check in with your fellow hams to see if we're all okay?

Furthermore, if you're in the aftermath of an emergency situation where phone and power are interrupted, and you have secured you're family members and home, why not go to your neighbors and let them know that you would be glad to pass a "we're okay" health and welfare report?

There is an amazing disparity, even within areas such as the Greater Pittsburgh area, where County EMA's and other served agencies regularly call up and welcome Amateur Radio volunteers, while others will have nothing to do with Amateur Radio.

On the surface, this seems unjust, but, quite often there are legitimate reasons for some of the served agencies' reluctance to reach out to Amateur Radio volunteers... usually as a result from past negative experiences (which are very hard to overcome). Some potential served agencies are simply unaware of our capabilities.

So, my advice is for us to continue to train, practice and help when and where we can.

I really believe that NBEMS/FLDIGI/FLMSG is a game changer. We just need to keep moving forward and take every opportunity to present the value that we can add during emergency situations.

Any thoughts or comments are welcome here on the list... please don't post replies to my privately... I'd much rather prefer an open, congenial discussion here on the list. Let's focus on the positive, rather than the negative.

Fire away!

4579. RE: [paNBEMS] EmComm activities

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-09 00:07:51 UTC
From: John Szwarc
Topic: 4571 Message: 4579

This attitude of "real traffic only", I believe, is holding back NBEMS from wider acceptance and usage.

By taking this position, you are essentially saying to the people that run the national traffic system that what they do is of little or no value and what we do is of a higher calling No, I'm not saying you put those word to paper, but I am suggesting that your position forces them (the NTS people) into the corner I have described.

The NTS people do not get to pick and choose what traffic they pass along. They are simply committed to passing/delivering all received traffic onto where it is directed to go. Yes, NBEMS would be a great tool for formal traffic messages. But if NBEMS operators want to pick and choose, based on what you think is the legitimacy of the traffic, the NTS people will likely choose not to depend on NBEMS. Consider the result if the Red Cross had activated shelters and asked for amateur radio operates to provide communications assistance. And what would be the result if the operator were to decide on their own what traffic was important and what was not? That is precisely the fear you give the NTS people when statements like this are made.

Obviously this is not the first time I have heard/read that the traffic on the NTS was canned/spam/repetitive/useless/etc. and that was the NBEMS operators were not interested in it. So as a result NBEMS has virtually no formal traffic to practice with. At least that is my observation here in WPA.

My point: I am suggesting to you that until those promoting NBEMS change their attitude on this topic, NBEMS may well have reached its maximum level of acceptance and implementation.

4580. Re: EmComm activities

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-09 01:01:37 UTC
From: prl423
Topic: 4571 Message: 4580

I think we had a great opportunity to try and mesh the traffic systems until it was shot down even before it was given a chance to work. It's unfortunate that people can't seem to understand that the traffic we pass on the NTS is traffic that is generated to help keep our skills sharp and to help newbies learn the ropes. And by the way folks, we are NOT in a real emergency NOW so we really don't have any Emergency traffic to pass, now do we?

I've been around all the digital nets, trained my guys in Clearfield when I was EC there, and I know NBEMS. I think I would have been able to get NTS people on board with NBEMS, passing traffic "both ways" and N3SPW is right, we don't pick and choose the traffic, we just deliver it. Yes there is mundane traffic, and it does get boring at times, but I personally enjoy delivering a mundane message to a local ham and talk about our hobby. So big deal, it's not emergency traffic, but it's honing our skills !!

I was told several months back that NBEMS considers our traffic spam and that they want no part of us. I don't make the rules, I just follow them.... Part of my job at Section Traffic Manager for WPA is to recruit and train ham in Traffic (this includes DIGITAL traffic). I had hoped we could have worked together to build something a better traffic system.

Until there is are person/s in NBEMS who is willing to take our traffic the way it is....we're not taking theirs.

Paul R. Lowes
ARRL WPA Section Traffic Manager

Topic: 4571 Message: 4582

Paul,

paNBEMS runs for the purpose of training amateur radio operators in the use of FLDIGI / FLMSG and FLWRAP for emergency communications. We're not affiliated with ARES, NTS or any other organizations and I'd like to keep it that way. We're just here for the purpose of training and practicing.

NTS folks are welcome to join our nets to learn how to use the free software for whatever purposes they see fit. As you know, it takes very little effort to get going with NBEMS, the software is free and just about every ham already has everything they need to get up and running. And they're also all welcome to join our paNBEMS yahoo group list to ask questions and get help... and you know very well that I will do whatever I can to help folks get up and running with NBEMS.

There should be no need to turn paNBEMS into an NTS traffic net for any of the NTS folks to recognize the value of being able to send Radiograms via NBEMS and there's nothing to keep any NTS folks from joining our training schedules and passing Test Routine, Test Health and Welfare or Test Emergency messages.

Please feel free to put out the invitation and let's see what kind of response we get.

Subject: [paNBEMS] Re: EmComm activities

I think we had a great opportunity to try and mesh the traffic systems until it was shot down even before it was given a chance to work. It's unfortunate that people can't seem to understand that the traffic we pass on the NTS is traffic that is generated to help keep our skills sharp and to help newbies learn the ropes. And by the way folks, we are NOT in a real emergency NOW so we really don't have any Emergency traffic to pass, now do we?

I've been around all the digital nets, trained my guys in Clearfield when I was EC there, and I know NBEMS. I think I would have been able to get NTS people on board with NBEMS, passing traffic "both ways" and N3SPW is right, we don't pick and choose the traffic, we just deliver it. Yes there is mundane traffic, and it does get boring at times, but I personally enjoy delivering a mundane message to a local ham and talk about our hobby. So big deal, it's not emergency traffic, but it's honing our skills !!

I was told several months back that NBEMS considers our traffic spam and that they want no part of us. I don't make the rules, I just follow them.... Part of my job at Section Traffic Manager for WPA is to recruit and train ham in Traffic (this includes DIGITAL

traffic). I had hoped we could have worked together to build something a better traffic system.

Until there is are person/s in NBEMS who is willing to take our traffic the way it is....we're not taking theirs.

4583. Re: [paNBEMS] Re: EmComm activities

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-09 03:47:21 UTC
From: ARS/ W3PRL
Topic: 4571 Message: 4583

Dave,

We had a lengthy talk up at Skyview concerning all this remember? I know what paNBEMS is for, and I am well aware of it's purpose. Seems to me I saw paNBEMS as the official Emcomm software for ARES just a short time back in an email or two. So I think you are wrong stating paNBEMS is not affiliated with ARES. Perhaps Harry can enlighten us? Maybe affiliated is the wrong word - don't know but there was a promotion on the connection of the ARES and paNBEMS just a short time ago.

No one is trying to turn anything into anything Dave. You will recall the suggestion was made by me that we should somehow facilitate each others endeavors and work together. I related to you that my suggestions were shot down due to mundane/spam traffic and that the paNBEMS community was not interested. Somehow the logic of the United States not being in an emergency situation relates to NO EMERGENCY traffic to pass, so all that leaves is mundane, spam traffic????? Don't think so.

Personally, I'd like to see someone else spearhead paNBEMS in an effort to have our entities work together instead of what I was told in previous emails back in December.

The whole point I was trying to make was that we have areas in Pittsburgh the NTS needs to deliver traffic too. It would have been great to take that NTS traffic/relay that traffic from NTS to paNBEMS and get it delivered, regardless what the traffic is.....that in itself would provide cross training of both Traffic Systems. It gets everyone familiar with both systems, but paNBEMS doesn't want this. As mentioned earlier, I also think the interest of the software has peaked because it usage is being handcuffed.

Respectfully, Those are my opinions.

Subject: Re: [paNBEMS] Re: EmComm activities

Paul,

paNBEMS runs for the purpose of training amateur radio operators in the use of FLDIGI / FLMSG and FLWRAP for emergency communications. We're not affiliated with ARES, NTS or any other organizations and I'd like to keep it that way. We're just here for the purpose of training and practicing.

NTS folks are welcome to join our nets to learn how to use the free software for whatever purposes they see fit. As you know, it takes very little effort to get going with NBEMS, the software is free and just about every ham already has everything they need to get up and running. And they're also all welcome to join our paNBEMS yahoo group list to ask questions and get help... and you know very well that I will do whatever I can to help folks get up and running with NBEMS.

There should be no need to turn paNBEMS into an NTS traffic net for any of the NTS folks to recognize the value of being able to send Radiograms via NBEMS and there's nothing to keep any NTS folks from joining our training schedules and passing Test Routine, Test Health and Welfare or Test Emergency messages.

Please feel free to put out the invitation and let's see what kind of response we get.

Subject: [paNBEMS] Re: EmComm activities

I think we had a great opportunity to try and mesh the traffic systems until it was shot down even before it was given a chance to work. It's unfortunate that people can't seem to understand that the traffic we pass on the NTS is traffic that is generated to help keep our skills sharp and to help newbies learn the ropes. And by the way folks, we are NOT in a real emergency NOW so we really don't have any Emergency traffic to pass, now do we?

I've been around all the digital nets, trained my guys in Clearfield when I was EC there, and I know NBEMS. I think I would have been able to get NTS people on board with NBEMS, passing traffic "both ways" and N3SPW is right, we don't pick and choose the traffic, we just deliver it. Yes there is mundane traffic, and it does get boring at times, but I personally enjoy delivering a mundane message to a local ham and talk about our hobby. So big deal, it's not emergency traffic, but it's honing our skills !!

I was told several months back that NBEMS considers our traffic spam and that they want no part of us. I don't make the rules, I just follow them.... Part of my job at Section Traffic Manager for WPA is to recruit and train ham in Traffic (this includes DIGITAL traffic). I had hoped we could have worked together to build something a better traffic system.

Until there is are person/s in NBEMS who is willing to take our traffic the way it is....we're not taking theirs.

Paul,

NBEMS is a free amateur radio software package produced by W1HKJ. You can use the software to run in a RTTY contest, ragchew, or to work toward your DXCC if that's what floats your boat.

paNBEMS is a working group that I formed for the purpose of training with, and promoting the use of, NBEMS for emergency communications. The purpose of paNBEMS IS to facilitate working with anyone, or any group, that expresses even the slightest interest in the use of NBEMS for emcomm.

Due to the hard work of Harry (W3YJ) and I, it looks like PEMA/ACS is adopting the use of the software as one of their recommended tools for ACS members. WPA ARES has adopted the use of the NBEMS software. WPA ARES came to their own conclusion that NBEMS makes sense, but this does not imply that paNBEMS has an official affiliation with ARES.

We've been at promoting digital sound card modes for use in emcomm here for about 6 years and paNBEMS has been at it for about 4 years. As a result of our work (either directly or indirectly), many NBEMS nets have been formed all across the country, quite a few of which are official NTS nets such as VDN and the MIDTN.

If you or the folks in NTS had ever come to the conclusion that NBEMS would add value to the NTS system, there has been nothing keeping any of you from starting your own nets. Over the last 4 years or so paNBEMS has welcomed ANYONE to jump in on our nets or to join our email list to ask for help.

Other than a lack of interest, nothing is standing in the way of NTS from taking the step toward NBEMS for their traffic handling.

Dave,

We had a lengthy talk up at Skyview concerning all this remember? I know what paNBEMS is for, and I am well aware of it's purpose. Seems to me I saw paNBEMS as the official Emcomm software for ARES just a short time back in an email or two. So I think you are wrong stating paNBEMS is not affiliated with ARES. Perhaps Harry can enlighten us? Maybe affiliated is the wrong word - don't know but there was a promotion on the connection of the ARES and paNBEMS just a short time ago.

No one is trying to turn anything into anything Dave. You will recall the suggestion was made by me that we should somehow facilitate each others endeavors and work together. I

related to you that my suggestions were shot down due to mundane/spam traffic and that the paNBEMS community was not interested. Somehow the logic of the United States not being in an emergency situation relates to NO EMERGENCY traffic to pass, so all that leaves is mundane, spam traffic????? Don't think so.

Personally, I'd like to see someone else spearhead paNBEMS in an effort to have our entities work together instead of what I was told in previous emails back in December.

The whole point I was trying to make was that we have areas in Pittsburgh the NTS needs to deliver traffic too. It would have been great to take that NTS traffic/relay that traffic from NTS to paNBEMS and get it delivered, regardless what the traffic is.....that in itself would provide cross training of both Traffic Systems. It gets everyone familiar with both systems, but paNBEMS doesn't want this. As mentioned earlier, I also think the interest of the software has peaked because it usage is being handcuffed.

Respectfully, Those are my opinions.

Subject: Re: [paNBEMS] Re: EmComm activities

Paul,

paNBEMS runs for the purpose of training amateur radio operators in the use of FLDIGI / FLMSG and FLWRAP for emergency communications. We're not affiliated with ARES, NTS or any other organizations and I'd like to keep it that way. We're just here for the purpose of training and practicing.

NTS folks are welcome to join our nets to learn how to use the free software for whatever purposes they see fit. As you know, it takes very little effort to get going with NBEMS, the software is free and just about every ham already has everything they need to get up and running. And they're also all welcome to join our paNBEMS yahoo group list to ask questions and get help... and you know very well that I will do whatever I can to help folks get up and running with NBEMS.

There should be no need to turn paNBEMS into an NTS traffic net for any of the NTS folks to recognize the value of being able to send Radiograms via NBEMS and there's nothing to keep any NTS folks from joining our training schedules and passing Test Routine, Test Health and Welfare or Test Emergency messages.

Please feel free to put out the invitation and let's see what kind of response we get.

Subject: [paNBEMS] Re: EmComm activities

I think we had a great opportunity to try and mesh the traffic systems until it was shot down even before it was given a chance to work. It's unfortunate that people can't seem to understand that the traffic we pass on the NTS is traffic that is generated to help keep our skills sharp and to help newbies learn the ropes. And by the way folks, we are NOT in a real emergency NOW so we really don't have any Emergency traffic to pass, now do we?

I've been around all the digital nets, trained my guys in Clearfield when I was EC there, and I know NBEMS. I think I would have been able to get NTS people on board with NBEMS, passing traffic "both ways" and N3SPW is right, we don't pick and choose the traffic, we just deliver it. Yes there is mundane traffic, and it does get boring at times, but I personally enjoy delivering a mundane message to a local ham and talk about our hobby. So big deal, it's not emergency traffic, but it's honing our skills !!

I was told several months back that NBEMS considers our traffic spam and that they want no part of us. I don't make the rules, I just follow them.... Part of my job at Section Traffic Manager for WPA is to recruit and train ham in Traffic (this includes DIGITAL traffic). I had hoped we could have worked together to build something a better traffic system.

Until there is are person/s in NBEMS who is willing to take our traffic the way it is....we're not taking theirs.

Topic: 4571 Message: 4585

Dave,

I am wondering what you consider the paNBEMS to be training for. You said you are training for emergency communications but want nothing to do with the designated EmComm groups and the existing traffic system? Really? So what I'm hearing is that you consider paNBEMS to be a parallel organization equivalent to ARES and/or the NTS? Is that really your position????? Who would ever call you to ask for assistance?? What MOPU's does paNBEMS have??? Any???? If nobody will ever call you, what is it that are you spinning your wheels preparing for????

If this is really your position, that's too bad. I'm coming to the conclusion that paNBEMS is not the right e-mail group for me. I volunteer my time and efforts to support EmComm preparedness and activities under the ARES/RACES banner and have no issues with cooperating. My occasional operations with NBEMS is only a side-note as part of that preparedness. But at no time did I ever understand that paNBEMS was itself an organization. As far as I knew it was your web site, an e-mail list and a net. That was it. I never thought of it as an organization or "working group".

I was the WPA Section Emergency Coordinator when the WPA Section adopted NBEMS as the official digital package for EmComm digital communications. We did not form our own net, rather we encouraged ARES members to participate in the existing paNBEMS net. Apparently this was a mistake. Apparently WPA should have formed our own net/nets rather than propping up a "working group" that doesn't care much for the real officially designated EmComm groups.

Now I'm wondering why I'm a member of this e-mail list. Maybe you can reassure me and tell me that my interpretation of what you said is mistaken.

4586. Re: [paNBEMS] Re: EmComm activities

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-09 10:43:19 UTC
From: AAR5KQ Steve Bellner
Topic: 4571 Message: 4586

It seems to me that it is not up to paNBEMS to setup and operate on NTS without authorization from ARRL. As I understand, that would fall under NTS management.

I get the impression paNBEMS is still working on perfecting a smooth running net and use of software. My local ARES, RACES, or MARS group should be the ones to initiate a digital net in their own interest, as should anyone else's.

As I have read Dave's comment, and I agree as should most who are involved with NTS that it would be interesting "to see someone in NTS do a test exercise for moving MASSIVE amounts of traffic, maybe on a national basis. I'm sure a lot would be learned in the process."

I believe Dave has his hands full with what he is working on now, such as improving and smoothing the digital net and net control process among other things.

By all means…Those who want something bad enough will cause it to happen. and if they want it done right, they will do it themselves.

paNBMS is doing a great service by demonstrating techniques of running a digital net. It may behoove the EmComm community to sustain looking at what can be done for amateur radio rather than what amateur radio can do for them.

Paul,

NBEMS is a free amateur radio software package produced by W1HKJ. You can use the software to run in a RTTY contest, ragchew, or to work toward your DXCC if that's what floats your boat.

paNBEMS is a working group that I formed for the purpose of training with, and promoting the use of, NBEMS for emergency communications. The purpose of paNBEMS IS to facilitate working with anyone, or any group, that expresses even the slightest interest in the use of NBEMS for emcomm.

Due to the hard work of Harry (W3YJ) and I, it looks like PEMA/ACS is adopting the use of the software as one of their recommended tools for ACS members. WPA ARES has adopted the use of the NBEMS software. WPA ARES came to their own conclusion that NBEMS makes sense, but this does not imply that paNBEMS has an official affiliation with ARES.

We've been at promoting digital sound card modes for use in emcomm here for about 6 years and paNBEMS has been at it for about 4 years. As a result of our work (either directly or indirectly), many NBEMS nets have been formed all across the country, quite a few of which

are official NTS nets such as VDN and the MIDTN.

If you or the folks in NTS had ever come to the conclusion that NBEMS would add value to the NTS system, there has been nothing keeping any of you from starting your own nets. Over the last 4 years or so paNBEMS has welcomed ANYONE to jump in on our nets or to join our email list to ask for help.

Other than a lack of interest, nothing is standing in the way of NTS from taking the step toward NBEMS for their traffic handling.

Subject: Re: [paNBEMS] Re: EmComm activities

Dave,

We had a lengthy talk up at Skyview concerning all this remember? I know what paNBEMS is for, and I am well aware of it's purpose. Seems to me I saw paNBEMS as the official Emcomm software for ARES just a short time back in an email or two. So I think you are wrong stating paNBEMS is not affiliated with ARES. Perhaps Harry can enlighten us? Maybe affiliated is the wrong word - don't know but there was a promotion on the connection of the ARES and paNBEMS just a short time ago.

No one is trying to turn anything into anything Dave. You will recall the suggestion was made by me that we should somehow facilitate each others endeavors and work together. I related to you that my suggestions were shot down due to mundane/spam traffic and that the paNBEMS community was not interested. Somehow the logic of the United States not being in an emergency situation relates to NO EMERGENCY traffic to pass, so all that leaves is mundane, spam traffic????? Don't think so.

Personally, I'd like to see someone else spearhead paNBEMS in an effort to have our entities work together instead of what I was told in previous emails back in December.

The whole point I was trying to make was that we have areas in Pittsburgh the NTS needs to deliver traffic too. It would have been great to take that NTS traffic/relay that traffic from NTS to paNBEMS and get it delivered, regardless what the traffic is.....that in itself would provide cross training of both Traffic Systems. It gets everyone familiar with both systems, but paNBEMS doesn't want this. As mentioned earlier, I also think the interest of the software has peaked because it usage is being handcuffed.

Respectfully, Those are my opinions.

Subject: Re: [paNBEMS] Re: EmComm activities

Paul,

paNBEMS runs for the purpose of training amateur radio operators in the use of FLDIGI / FLMSG and FLWRAP for emergency communications. We're not affiliated with ARES, NTS or any other organizations and I'd like to keep it that way. We're just here for the purpose of training and practicing.

NTS folks are welcome to join our nets to learn how to use the free software for whatever purposes they see fit. As you know, it takes very little effort to get going with NBEMS, the software is free and just about every ham already has everything they need to get up and running. And they're also all welcome to join our paNBEMS yahoo group list to ask questions and get help... and you know very well that I will do whatever I can to help folks get up and running with NBEMS.

There should be no need to turn paNBEMS into an NTS traffic net for any of the NTS folks to recognize the value of being able to send Radiograms via NBEMS and there's nothing to keep any NTS folks from joining our training schedules and passing Test Routine, Test Health and Welfare or Test Emergency messages.

Please feel free to put out the invitation and let's see what kind of response we get.

Subject: [paNBEMS] Re: EmComm activities

I think we had a great opportunity to try and mesh the traffic systems until it was shot down even before it was given a chance to work. It's unfortunate that people can't seem to understand that the traffic we pass on the NTS is traffic that is generated to help keep our skills sharp and to help newbies learn the ropes. And by the way folks, we are NOT in a real emergency NOW so we really don't have any Emergency traffic to pass, now do we?

I've been around all the digital nets, trained my guys in Clearfield when I was EC there, and I know NBEMS. I think I would have been able to get NTS people on board with NBEMS, passing traffic "both ways" and N3SPW is right, we don't pick and choose the traffic, we just deliver it. Yes there is mundane traffic, and it does get boring at times, but I personally enjoy delivering a mundane message to a local ham and talk about our hobby. So big deal, it's not emergency traffic, but it's honing our skills !!

I was told several months back that NBEMS considers our traffic spam and that they want no part of us. I don't make the rules, I just follow them.... Part of my job at Section Traffic Manager for WPA is to recruit and train ham in Traffic (this includes DIGITAL traffic). I had hoped we could have worked together to build something a better traffic system.

Until there is are person/s in NBEMS who is willing to take our traffic the way it is....we're not taking theirs.

4587. Re: [paNBEMS] Re: EmComm activities

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-09 11:30:24 UTC
From: John Coulter
Topic: 4571 Message: 4587

To Webmaster:
Please remove my email address from paNBEMS@yahoogroups.com. There seems to be an excessive amount of senseless bickering and politics coming from this group.

Thank you,

John Coulter
AC2JC
President, Chautauqua County Amateur FM Association

From: AAR5KQ Steve Bellner <aar5kq@...>
To: paNBEMS@yahoogroups.com

Subject: Re: [paNBEMS] Re: EmComm activities

☐
It seems to me
that it is not up to paNBEMS to setup and operate on NTS without authorization
from ARRL. As I understand, that would fall under NTS management.

I get the
impression paNBEMS is still working on perfecting a smooth running net and use of software. My local ARES, RACES, or MARS group should be the ones to initiate a digital net in their own interest, as should anyone else's.

As I have read
Dave's comment, and I agree as should most who are involved with NTS that it would be interesting "to see someone in NTS do a test exercise
for moving MASSIVE amounts of traffic, maybe on a national basis. I'm sure a lot would be learned in the process."

I
believe Dave has his hands full with what he is working on now, such as improving and smoothing the digital net and net control process among other things.

By all means…Those who
want something bad enough will cause it to happen. and if they want it done right, they will do it themselves.

paNBMS is
doing a great service by demonstrating techniques of running a digital net. It may behoove the EmComm community to sustain looking at what can be done for amateur radio rather than what amateur radio can do for them.

Steve /
W8TER

>Paul,
>
>
>NBEMS is a free amateur radio software package produced by W1HKJ. You can use the software to run in a RTTY contest, ragchew, or to work toward your DXCC if that's what floats your boat.
>
>
>paNBEMS is a working group that I formed for the purpose of training with, and promoting the use of, NBEMS for emergency communications. The purpose of paNBEMS IS to facilitate working with anyone, or any group, that expresses even the slightest interest in the use of NBEMS for emcomm.
>
>
>Due to the hard work of Harry (W3YJ) and I, it looks like PEMA/ACS is adopting the use of the software as one of their recommended tools for ACS members. WPA ARES has adopted the use of the NBEMS software. WPA ARES came to their own conclusion that NBEMS makes sense, but this does not imply that paNBEMS has an official affiliation with ARES.
>
>
>We've been at promoting digital sound card modes for use in emcomm here for about 6 years and paNBEMS has been at it for about 4 years. As a result of our work (either directly or indirectly), many NBEMS nets have been formed all across the country, quite a few of which are official NTS nets such as VDN and the MIDTN.
>
>
>If you or the folks in NTS had ever come to the conclusion that NBEMS would add value to the NTS system, there has been nothing keeping any of you from starting your own nets. Over the last 4 years or so paNBEMS has welcomed ANYONE to jump in on our nets or to join our email list to ask for help.
>
>
>Other than a lack of interest, nothing is standing in the way of NTS from taking the step toward NBEMS for their traffic handling.

>We had a lengthy talk up at Skyview concerning all this remember? I know what paNBEMS is for, and I am well aware of it's purpose. Seems to me I saw paNBEMS as the official Emcomm software for ARES just a short time back in an email or two. So I think you are wrong stating paNBEMS is not affiliated with ARES. Perhaps Harry can enlighten us? Maybe affiliated is the wrong word - don't know but there was a promotion on the connection of the ARES and paNBEMS just a short time ago.
>
>
>
>No one is trying to turn anything into anything Dave. You will recall the suggestion was made by me that we should somehow facilitate each others endeavors and work together. I related to you that my suggestions were shot down due to mundane/spam traffic and that the paNBEMS community was not interested. Somehow the logic of the United States not being in an emergency situation relates to NO EMERGENCY traffic to pass, so all that leaves is mundane, spam traffic????? Don't think so.
>
>
>
>Personally, I'd like to see someone else spearhead paNBEMS in an effort to have our entities work together instead of what I was told in previous emails back in December.
>
>
>The whole point I was trying to make was that we have areas in Pittsburgh the NTS needs to deliver traffic too. It would have been great to take that NTS traffic/relay that traffic from NTS to paNBEMS and get it delivered, regardless what the traffic is.....that in itself would provide cross training of both Traffic Systems. It gets everyone familiar with both systems, but paNBEMS doesn't want this. As mentioned earlier, I also think the interest of the software has peaked because it usage is being handcuffed.

>I think we had a great opportunity to
try and mesh the traffic systems until it was shot down even before it was
given a chance to work. It's unfortunate that people can't seem to
understand that the traffic we pass on the NTS is traffic that is generated to
help keep our skills sharp and to help newbies learn the ropes. And by
the way folks, we are NOT in a real emergency NOW so we really don't have any
Emergency traffic to pass, now do we?
>
>I've been around all the digital
nets, trained my guys in Clearfield when I was EC there, and I know NBEMS. I
think I would have been able to get NTS people on board with NBEMS, passing
traffic "both ways" and N3SPW is right, we don't pick and choose the traffic,
we just deliver it. Yes there is mundane traffic, and it does get boring
at times, but I personally enjoy delivering a mundane message to a local ham
and talk about our hobby. So big deal, it's not emergency traffic, but
it's honing our skills !!
>
>I was told several months back that
NBEMS considers our traffic spam and that they want no part of us. I
don't make the rules, I just follow them.... Part of my job at Section Traffic
Manager for WPA is to recruit and train ham in Traffic (this includes DIGITAL
traffic). I had hoped we could have worked together to build something a
better traffic system.

4588. EmComm Messages (Simulations of Real Traffic)

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-09 15:31:23 UTC
From: elancki
Topic: 4588 Message: 4588

I have been conducting an NBEMS digital training net, using FLMsg. We use the Radiogram form, since it is the RACES standard in New York. Our exercise typically consists of and sending the simple Radiogram messages provided on the Sunday morning RACES net.

Yesterday, I composed a FLMsg Radiogram about lightning safety, which contained the following URL of a CoCoRaHS Webinar on lightning:

http://www.youtube.com/watch?v=Ek_PXi2j8Is&list=PLDDC91E3A979406CE&index=6&feature=plpp_video

The FLMsg Radiogram form converted all text to upper case, and it split the URL into a series of 15 words, which was virtually unusable. We ended up using the Plain Text form which worked OK for the exercise.

I have two questions:
1. How does PaNBEMS use the FLMsg Radiogram form to send a complicated word such as the CoCoRaHS URL?
2. How does the NTS handle sending a complicated word such as the CoCoRaHS URL?

The simple RACES drill messages have not been "pushing the envelope" and forcing us to address technical issues that might be encountered during a real emergency. Having little personal experience with actual EmComm traffic, I don't know what other technical issues we might encounter.

So I have a suggestion:
Can the experienced NBEMS EmComm community provide an assortment of FLMsg drill files (and CSV files) that might be typical of exchanges during a real emergency? If so, please provide a URL where the FLMsg files could be downloaded from.

Thanks & 73,
Ed

Please consider playing an active role in an established EmComm organization. The most recognizable, PA, RACES (Part 97 created with restrictions), ARES, ARRL created 77 years ago and PEMA ACS (a state program that includes all volunteer radion groups, ARES, RACES, CAP, MARS, REACTS etc.). If ham radio is to be take seriously, it must demonstrate discipline e.g. ICS training.. Follow the discipline and resist the urge to "jump on the air" in an emergency. Emergency services iand Served agencies want to respond with those they know and trust.

Keep up the good work in developing NBEMS as a tool and skill of hams, but, recognize others have an investment in their favorite and familiar modes.

Agreed, Larry.

paNBEMS, ARES, NTS, SKYWARN and ACS/RACES could all use more participation and dedication and we would all benefit.

4591. About paNBEMS and other "Official" emcomm groups

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-09 17:31:56 UTC
From: KB3FXI
Topic: 4591 Message: 4591

paNBEMS has never attempted to be a parallel operational organization to any other groups. We're doing what very few other groups had been willing to do themselves, which was (and is) to train people in, and promote the use of, NBEMS. Through a lot of hard work and time, we've been quite successful.

Here's a little history to help put into context of what we do and why the paNBEMS working group was formed.

Several years prior to the formation of paNBEMS, we were banging our heads against the wall trying to get participation in digital communications in Western Pennsylvania area. Back around 2003 - 2004, we spent countless hours trying to promote packet and increase participation, and had little success. Then we started using MixW and had a greater level of success.

Once NBEMS was released, we quickly realized it would be a game changer. So, we formed paNBEMS to concentrate on training and promoting NBEMS as a free, multi platform tool that virtually any ham with interest could use effectively for emergency communications without having to purchase additional equipment.

Here's what we have done, and continue to do:

- work with the NBEMS alpha team to test new versions and modes
- suggest new features
- identify and report software bugs
- conduct nets for the purpose of training ANYONE from ANY groups
- produce training materials and videos
- set one on one or group schedules with specific individuals for focused training and testing
- conduct one on one phone/skype calls to help folks with installation and setup problems

Through the work and testing of paNBEMS, we have helped promote the use of NBEMS in many nets throughout the State and the Country.

We suggested the idea of FLMSG form-based messaging with the embedded checksum and W1HKJ produced the solution. We have helped tons of people get trained and proficient with the use of the software who then in turn trained others. We spent a GREAT DEAL OF TIME AND WORK ON THE NTS/ARRL RADIOGRAM FORM that is now used in FLMSG.

Our participants are diverse and are members of MARS, SKYWARN, ARES, RACES, ACS and some are members of neither. Although we have established call frequencies, we're not really an emcomm operational organization, and we have never positioned the group as such.

New NBEMS nets are forming under the ARES and NTS banners, which makes sense since these nets will fall under their specific operational system and their MOU's and other operational guidelines.

I think it would be GREAT if ARES, NTS and ACS would organize and promote their own operational-based nets, too. We'd love to help train NCS on how to run a digital net. This would benefit both paNBEMS and the other groups and help to further promote the use of NBEMS throughout the nation.

paNBEMS will remain as an agnostic working group to help ANYONE with interest in learning NBEMS. Having said that, I am honored and grateful of the support that we have received from the WPA ARES leadership. It would be great to see the same level of interest from NTS and other groups such as SKYWARN.

Our goal with paNBEMS is to continue moving forward with new advancements in NBEMS and continued training which will hopefully lead to further adoption with other groups and increased activities and proficiency with the existing groups.

From: KB3FXI
Topic: 4588 Message: 4592

Ed,

The NTS/Radiogram is an elegant form and system for short messages. The numbered radiograms are a fantastic example of simplicity by acting as a form of data compression.

But the ARRL Radiogram isn't good for sending something like a link or other detailed info.

I doubt that most served agencies are willing to work with the Radiogram. Most served agencies are using either the ICS 213 form, or a modified version of the same form.

My personal opinion is that the NTS Radiogram is the PERFECT tool for short tactical messages and for Health and Welfare.

I think NTS has updated info on how to send email addresses and web addresses, but I think you're still going to have a hard time getting a big random url over the NTS nets like that unless you stay digital from start to destination.

For example, imagine reading this off phonetically:

v=Ek_PXi2j8Is&list=PLDDC91E3A979406CE&index=6&feature=plpp_video

victor, equal sign, echo, kilo, underscore, papa, xray, india, two, juliet, eight, india, sierra, and symbol, lima, india, sierra, tango, equal sign... and on, and on....

Thank you for your hard work and dedication. We are now using FLMSG in MARS format and ICS format to help both MARS and ARES. A bunch of us started using digital sound card programs such as MixW a long time ago as well. MT 63 1KHZ long works great for key board and sending our message traffic. Of course we can't use it on the ham bands so we are branching back to packeteering. What would be the best HF mode to pass traffic into an EOC? Thanks again for all your hard work and dedication. Robert,

Thanks for the kind words.

For HF regional NVIS comms, we've tried a lot of different modes but we always fall back to Olivia 8/500 for shorter messages and MT63 1k long for longer messages as long as you at least have moderate conditions.

On our call spots on 80 and 40, 1k wide modes are permissible, but it's not nice to run 1k on a busy spot and on our paNBEMS nets we never go from Olivia 8/500 to 1k unless there are no adjoining stations we might interfere with after the switch.

There are some very interesting higher speed modes being tested now in some FLDIGI alpha versions. Most of them are under 1500 Hz wide but are quite fast. Some of these new modes might prove to be extremely effective with wpm rates between 300 and 1000 under moderate to good conditions. MT63 1k long is 100wpm.

For VERY heavy static crash / qrm conditions like we have on NVIS with the summer storms, MT63 500 Hz works better than any other mode we've tested with, including the much slower Olivia modes.

From: KD4YOL@aol.com
Topic: 4595 Message: 4595

Thanks Dave, I look forward to the faster modes. We do have a lot of PM T-storms in VA. It makes some of the faster modes not work. The MT 63 1 KHZ long works great. I am glad you let me know that it is a viable mode on the ham bands. In emergency communications it will help. I do understand not doing it if there are adjacent stations. Rob.

Ok, Rob... just a few things... I said qrm in my last, which of course I meant qrn. The MT63 500 Hz wide mode is even better under the static crash conditions than MT63 1k long, but the FEC delay on MT63 500 Hz is longer and it's half the speed (50wpm).

Also, you can check the band plans for 40m and 80m. The gentleman agreements are for no wider than 500 Hz except for the upper portions of the amateur band digital allocations. The problem up in those higher spots is there are a lot of pactor and winmor robots to deal with. We were never able to fine a consistently clear opening, so we decided to go with spots in the lower portion of bands.

Running over 500 hz in the lower portions is not a rule violation, but we try to keep on the 500 Hz wide modes as much as possible unless we have a large message to send, then NCS switches the net to MT63 1k for the traffic, only if the spot is clear... then back to Olivia 8/500 for shorter messages or check ins.

Thanks Dave, I look forward to the faster modes. We do have a lot of PM T-storms in VA. It makes some of the faster modes not work. The MT 63 1 KHZ long works great. I am glad you let me know that it is a viable mode on the ham bands. In emergency communications it will help. I do understand not doing it if there are adjacent stations. Rob.

4599. FLMSG - CSV Spreadsheets and Databases

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-12 23:42:21 UTC
From: KB3FXI
Topic: 4599 Message: 4599

Hello all,

A few of us on the NBEMS alpha team are testing with an alpha version of FLMSG which is designed to make the transfer of spreadsheets and databases much easier.

This development might eliminate the need for FLWRAP and should be a very nice improvement in the NBEMS package.

Testing is going well so far and I'll post here to the list when and if the new version of FLMSG is released.

Fred,

I happened to catch that ICS 203 message, too.

I chatted with wb0scn and wb0kgn (both of whom were testing with FLMSG) for a few minutes after receiving the message.

Olivia 8/500 did pretty well with light copy and quite a bit of static crashes.

4604. NBEMS monitoring stations - updates and/or computer crashes (Chrome)

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-13 17:25:57 UTC
From: KB3FXI
Topic: 4604 Message: 4604

Hello all,

For those of us who leave our stations on to monitor NBEMS call frequencies when we're out of the shack, here's something to consider.

You may want to disable your operating system automatic updates. I run Windows Vista and sometimes the OS updates will initiate a computer restart, usually in the early morning hours. So, when I get back to the shack, instead of seeing all the traffic from the monitoring spot in FLDIGI/FLMSG, I'm looking at my desktop.

Also, on a somewhat related subject, I have been running Vista for about 4 years and got my first "blue screens of death" over the last several days.

I installed Free AVG to do a scan for virus but came up with nothing. I decided to leave AVG running and it was popping up some warning messages that my Chrome browser was chewing up excessive amounts of memory, which I suspect was causing my crashes.

I switched to Firefox and have not had and problems since.

I wonder if anyone else on the list has had any problems with the Google Chrome browser?

Subject: FW: [PropNET-Online] X1 Class CME Solar Flare inbound Earth. ETA 14 July

X-FLARE! Big sunspot AR1520 unleashed an X1.4-class solar flare on July 12th at 1653 UT. Because this sunspot is directly facing Earth, everything about the blast was geoeffective. For one thing, it hurled a coronal mass ejection (CME) directly toward our planet. According to a forecast track prepared by analysts at the Goddard Space Weather Lab, the CME will hit Earth on July 14th around 10:20 UT (+/- 7 hours) and could spark strong geomagnetic storms. Sky watchers should be alert for auroras this weekend. Geomagnetic storm alerts: text, voice.

The explosion also strobed Earth with a pulse of extreme UV radiation, shown here in an image captured by NASA's Solar Dynamics Observatory:

The UV pulse partially ionized Earth's upper atmosphere, disturbing the normal propagation of radio signals around the planet. Monitoring stations in Norway and Ireland recorded the sudden ionospheric disturbance.

Finally, solar protons accelerated by the blast are swarming around Earth. The radiation storm, in progress, ranks "S1" on NOAA space weather scales, which means it poses no serious threat to satellites or astronauts. This could change if the storm continues to intensify. Stay tuned.

The forecasted CME has been delayed but should hit the Ionosphere after
2300z. Satellite instrumentation is now seeing the impact and it appears it
may be large enough for visible Aurora, especially at Northern latitudes.
The latest prediction is for a K-index of 8 which should be strong enough
even for visible Aurora at lower latitudes if it holds.

Watch the Northern skies starting after your sunset. We should also hear
some Au propagation beginning after 2300z.

TO: WC3O
POSITION: Skyview Radio Officer
FROM: KB3FXI
POSITION: paNBEMS
SUBJ: WX3SKY - Station Report, July 14/15, 2012
DATE: 2012-07-15
TIME: 1140L
MESSAGE:
The Dell computer was installed on 7/14/12 at the wx3sky VHF/UHF station. The Ethernet cable was not long enough to reach the computer which is now on the floor rather than the desk surface.

The computer is loaded with the latest FLDIGI and FLMSG NBEMS software and I also installed Libra Office, and open source, free Office program with word processor and spreadsheet.

7/14/12 WX3SKY Station activity report
1pm ET - Checked in with AD5XJ, LA, NCS for Southern Territory SATERN NBEMS net on 14.065 USB and copied the Net Bulletin. AD5XJ requested that we relay the bulletin on the paNBEMS 7/15/12 nets.

7/15/12 WX3SKY Station activity report
At 9:25am ET, wx3sky made late check in on the 75m (3.9935 LSB) PEMA/ACS phone net
10am - 10:54 - kb3fxi at wx3ksy ran NCS for paNBEMS 80m digital net on 3.5835 USB with the following check ins:
w3fdk, MD
k3mxs, Berks PA
kb3wfd, Venango PA
n3gyw, Crawford PA
k3hps, Bulter PA
w3tnu, Westmoreland PA
n3lvz, Somerset PA
kb3pcy, Chester PA
n3cm, Mercer PA
w3iag, WNY ARES
ko3i, Kent CO DE

Relay bulletin from 7/14/12 So. Terr SATERN was transmitted as well as the PGH NWS Hazardous Weather Outlook for the Call Watch Area

11am to 11:28am ET kb3fxi at WX3SKY ran NCS for paNBEMS 40m net on 7.073 USB with the following check ins:
k3hps, Butler PA
kb0emb,,
kc5sam, Frontenac MN

Relay bulletin from 7/14/12 So. Terr SATERN was transmitted

Conditions were moderate on 80m and poor on 40m

End of Report

Sander,

Yes.. I was at the Skyview Radio Society running on the Lightning Bolt 2 element quad. I saw the relay from a 4 station for you into the net but didn't copy you directly, but I didn't swing the beam off of NCS in LA.

I was really pleased to see your station on the air with NBEMS so soon after your first FLDIGI qso with me the day before.

Conditions were pretty bad on 40m and above today. I'm sure that's due to the solar flare.

Keep us up to date with you progress there. I'm really looking forward to having you in on the paNBEMS nets.

Dave,

I got this radio and associated bits and pieces to talk to people, rain or shine. Getting experience with various modes using the available nets seems like a great way to learn. Not just to learn the modes but to get to know people you may some day depend on to pass along 'real' traffic. The human network on top of the radio net.

I appreciate you running the net and helping newbies like myself get on the air. One thing I need to figure out is how to configure fldigi so it grabs the message you sent in a special format. I saw the text roll by and I could read it but of course that was not the point. Now that I think about it it's probably a good idea to record nets so they can be played back later to see if the handling of the incoming traffic can be improved. I will do that next time.

Let me add that I like your net report a lot. Net reports help motivate people to try to join in. I'm hoping the SATERN net from yesterday will post a report to NBEMSham but I've sent an email to the controller for an update on how my relay worked.

73,

Sander W1SOP

Sander,

Here's a training video I did just the other day on configuring FLDIGI with FLMSG to automatically extract, save and display (if you choose to) your received FLMSG messages in your default web browser:

http://youtu.be/psP489NOkg0

I've been meaning to do the formal net reports for a long time now when I work from our club stations at wx3sky / k3mjw, the Skyview Radio Society. Today was my first report and rather than copy to my thumb drive, I left my home station set to our paNBEMS call freq on 7.073 and sent it by RF. Sure enough, when I got home, there it was... the FLMSG message, popped up on my default web browser and saved at a file, all ready to ship off in an email to our club radio officer.

This stuff is great and a lot of fun.

From: Rolan O. Clark
Topic: 4611 Message: 4616
Attachments: 1 described; binary payloads are missing from this source WARC

40 must have really been in the dumps, I called cq at approx 1055 and 1105 and listened 1115 and nary a non-static sound

I didn’t expect the solar flare to wipe out daytime 40 but something did. Signals on 40 are usually s4-6 for the net.

Take care,

Hi Dave,

yes, I saw your video and watched it already. I had that setting already taken care of but it was good to confirm I had it done correctly. I guess that means the message was corrupted somehow and not recognized.

What I will do is send a message to a sound recorder and play it back into fldigi to see if it gets decoded properly.

thanks and 73,

Sander W1SOP

Hi Dave,

I used fldigi to record the transmit of an flwrap'd text message. I then played this file back to fldigi and sure enough, the file was recognized and stored. Yesterday I must have missed one or two critical characters, I don't know. Will be logging all text output from now one.

I did notice that there was quite a bit of splatter in the recorded sound. Not that I did not use an external app to record. I told fldigi to record using File->Audio->Tx generate. On decode (file->Audio->Playback) the first few characters typically get garbled. That was surprising. The recorded and played back file should be perfect. I will investigate this some more.

73,

Sander W1SOP

40 and all bands above it were the pits. 20 is still dead here with nothing being heard, I can barely work the RMS station on 40 meters in the City from my location. 40 is alive and well at 0130z with loads of European stations on cw on 40 meters…..

From: John L. Rogers
Topic: 4621 Message: 4621

IN SUPPORT OF OFFICIAL NBEMS training by Harry Bloomberg, W3YJ. The location has been moved to:

Mount Calvary Lutheran Church 1000 Scalp Ave. Johnstown, PA 15904

Parking is in the Church Lot at the REAR of the building.

Talk in will be on 146.940 WA3WGN, 147.550 Simplex.

Address Questions To: ARES@...

EVERYONE IS INVITED INCLUDING ALL CLUBS, EMA PERSONNEL, EOC & 911 CENTER STAFF.

From: Harry Bloomberg hbloomb@...

A training session on Narrow Band Emergency Messaging System (NBEMS) will be conducted by WPA ARES Assistant SEC Harry Bloomberg W3YJ, 3PM at the Mount Calvary Lutheran Church 1000 Scalp Ave. Johnstown, PA 15904. REAR ENTRANCE... The session is hosted by Cambria Radio Club.

NBEMS is the standard digital emergency communications package for Western PA ARES. It runs on nearly any computer and radio and is completely FREE. With NBEMS, you can reliably send spreadsheets, text messages, and forms like ARRL Radiograms and ICS-213 over both HF and VHF/UHF.

Please bring your portable computers and radios to the training session. Harry will help you install and test NBEMS on your system. By the time the session is complete you will be sending and receiving messages. THIS IS A LIVE, HANDS ON TRAINING.

The use of the NBEMS software requires nothing more than a laptop or desktop computer and an amateur radio transceiver (even an HT) to send and receive data/text using the NBEMS soundcard-based digital software.

From: KB3FXI
Topic: 4622 Message: 4622

Hello all,

I'd like to do some testing of some high speed modes in an alpha version of FLDIGI. The developers have asked us to not widely distribute the software, so I'd like to do some limited testing and invite anyone within reasonable NVIS 80m range of the Pittsburgh area to drop me a line off the list if you're interested.

I'd like to do the testing around 9pm ET in the evenings.

Thanks!

Good-Golly, I've never seen band conditions this bad.

I just took a quick spin of the dial on 10, 17, 20 and 40 and heard a total of only TWO very weak stations on 20, and literally nothing else heard on the other bands.

Let's hope the solar flares settle down and the bands pick up.

Indeed they are. I've had little luck with Dx on 20m although when I was WSPRing my signal (5W) made it all the way to Tasmania so that was cool. 20m PSK31 had activity last night but I heard mostly US and Puerto Rico. In fact the PR station blasted his life's history including the brand and OS of his computer using his brag macro :-)

I managed a winlink connection between CT and FL last night but the station in VT could not be raised. A 20m sked with someone just a few dozen miles away was problematic.

This whole 'if all else fails' motto takes on a different meaning when it's the one thing that doesn't work :-) Let's hope we won't have solar flares and hurricanes at the same time.

From: Fred VE3FAL
Topic: 4627 Message: 4627

20 meter PSK was absolutely great last night with stations from South America and Europe both in after 0030z.

Also heard a Kenyan station calling CQ as well..

I have the 3 element yagi pointing due South today and will monitor 14.065.

I have not heard any NBEMS stuff on this assignment for weeks now yet PSK is active.

40 and 80 meters still yield great stuff in the evenings even with all the static crashes.

4628. Using TxID and RxID In FLdigi

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-18 17:09:54 UTC
From: Charles J. Hargrove
Topic: 4628 Message: 4628

Just a procedural thought when using the digimodes available in FLdigi.
I always leave my RxID and TxID buttons turned on so that I do not have to
guess the mode of the other station and they don't have to guess my mode.
The only time that I turn off the RxID is when I am the NCS of a net like
NY-NBEMS or USeast-NBEMS on 7.036/1000 waterfall.

Good point, Charles.

Additionally, remember there are options under FLDIGI config, ID's where we can choose or disable "search entire passband". When this option is disabled, the RSID detection is limited to +/- 250 Hz on the waterfall. If I'm checking in on a net on a specific spot, I usually disable "detector searches entire passband" so that if an adjacent stations comes up that's not associated with the net, you don't run the risk of FLDIGI switching to that signal which results in missing your intended spot (this always seems to happen right in the middle of an FLMSG message when I forget to disable).

FLDIGI also gives the ability to pick and choose what specific modes you would like the RSID detector to react to or ignore. This is also under config, ID's.

Here's a video I did a while back on the subject:
http://youtu.be/-r_62rX1GPM

Just started having trouble with my netbook and rig communicating this week and the rig stuck in transmit while the program sends maybe one letter and then stops sending locking the radio up in XT.

Using W7 with Acer Aspire One and running FLDIG 3.21.49..

Downloaded MultiPSK this past week and that is the only addition I made so that might be my culprit.

Using USB port and prolific adaptor to go to the rig which is FT-897.

Hello all,

I'd like to do some testing tonight at 10pm ET on 3.584 USB, 1500 Hz center waterfall. I'll put out the initial call with Olivia 8/500.

If you're within NVIS range of Western PA, please drop me a line at kb3fxi at yahoo dot com and I'll give you the link for the FLDIGI alpha download.

We will test with FLDIGI alpha JD3 and the following modes:

psk63 - mapped to 4 carrier psk63r, 220wpm, 330 Hz
psk500 - mapped to 10 carrier psk125r, 1100wpm, 1700 Hz
psk250r - mapped to 5 carrier psk250r, 500wpm, 825 Hz
thor22 - mapped to thor88, 312wpm, 1600 Hz

Let's hope for decent conditions. I'll be their rain or shine.

Ok nothing on 20 meters so going to 7.073 till 0200z, will leave FLARQ on if anyone wants to attempt a connect or if anyone wants to practice sending msg FLMSG will open when msg rcvd.

I am 1000 on waterfall with RSID on and PSK125R.

Dave,

Sorry, no copy on any of the PSK modes or on Thor22. Olivia 8/500 was getting through with 95% copy but not the other modes. I would like to try again later after I reload and reinstall the alpha version.

Thanks, Jim/k4pz

20 meters is atrocious today for noise and very few signals.

I am monitoring again on 14.065 1000 on the waterfall with RSID on as well as FLMSG and FLARQ monitoring.

Just tuned up the 20 meter OHR100 to work some cw but not hearing much at all.

It is 07202012 1634z

4640. high speed mode test last night

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-20 17:24:35 UTC
From: KB3FXI
Topic: 4640 Message: 4640

Hello all,

We did some testing last night from my station here in the Pittsburgh area. I put out a call for volunteers within reasonable 80m NVIS range of my station. We had 3 stations within about 200 miles and 3 others that were much further out (460, 600, 760).

We put out our initial call on Olivia 8/500. Conditions were good in terms of signal strength and lack of fading to the closer stations (579 / 599), but only marginal to the more distant stations (439 - 559). The other major factor was very heavy static crashes due to electrical storms within 300 miles of my station.

Here's the results we had from a few of the modes in vs 3.21.40 JD3

4 carrier, psk63r - about 25-50% copy to the close stations and negative copy on the distant stations
10 carrier, psk125r - about 5-10% copy on the close stations and negative copy on the distant stations
Thor88 - about 90% copy on the close stations and maybe 25% copy on the distant stations (some reported negative copy and others reported partial)

My conclusion is that for straight FEC transmissions without handshaking, under heavy static crashes, none of the modes tested would have been sufficient, under the somewhat extreme qrn conditions.

MT63 still seems to be the absolute best straight FEC mode for heavy qrn. For use with FLARQ, I think that Thor88 may have worked, with small block size and some retries of course.

While some might consider these results discouraging, it's important to keep in mind that every mode has strengths and weaknesses and there are always trade-offs to be made in terns of speed, bandwidth and reliability with different modes under varying conditions.

One of the things that really makes NBEMS such a powerful tool for emcomm is our incredible choice of modes and methods for getting the message through. And it's fun learning and becoming more proficient as we go.

We're looking forward to see how we do next time under better 80m NVIS conditions. We plan to eventually work into some FLARQ testing as well. Our ultimate goal with FLARQ is to use that method specifically for very large file transfers and/or bulk message handoffs between key individual relay stations.

We'll be sure to report our progress after our next tests.

Sander,

No, I didn't use Skype. I'm still having some computer issues when I'm running too many apps at the same time. It seems like some sort of memory issue.

I'm afraid the old $400 dollar Lenovo is reaching the end of its little life span. The box has given me nothing to complain about whatsoever up until about 3 weeks ago... just about the time my FT-817 died, too! UG.

Once I get back to work (waiting for a call next week - keeping my fingers crossed for this one), I think I'm going to buy one of the blowout DIY kits from tiger direct. I was hoping to hold out for Windows 8 but I'm not sure I can make it that long.

Dave,

these problems can be hard to debug. If you're planning to build your own computer (I do that too) then I think you have the skills to properly debug this problem. I would keep an eye on the memory utilization in task manager and reseat the DIMMS if I suspected memory corruption.

4645. Calibration and AFC

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-21 16:10:02 UTC
From: David Kleber
Topic: 4634 Message: 4645

Geoffrey,

Very good points. We're a bit spoiled with the flexibility in terms of the tolerance that Olivia and MT63 provide... with both modes, you can be pretty far off on the waterfall spot while still getting perfect copy. The tuning spot on the waterfall can be very critical for a lot of other modes.

I'm also wondering if anyone was running FLDIGI with AFC at the bottom of the screen checked. I would highly advise against ever running any of the psk modes with AFC on. The only time I ever use AFC is when I am receiving a PSK signal that is slightly off, and what I do is toggle the AFC setting on just long enough for the software to fine tune, then I immediately turn it off. If you leave AFC on, you will see your spot on the waterfall start drifting around after the other station stops transmitting.... not good.

Running the checksr.exe program for the calibration routine is a simple process that all NBEMS ops should do before getting on the air.

Here's a video on the subject:
http://youtu.be/-1wZ7uIA-Qs

You can get CheckSR.exe (windows only) here:
http://www.pa-sitrep.com/checksr/CheckSR.exe

Please note that the video is a bit dated and we have revised the run time for the checksr.exe program down from 3-5 minutes to only a minute or two before you hit stop to record your correction figures.

Feel free to post to the list if you have any questions on sound card calibration.

One thing that myself and others have noticed is that these modes do not have very good frequency agility, meaning, you need to be tuned perfectly. One thing you might try doing is calibrating your sound card to make sure it's as close as it can get to the desired waterfall frequency. It would also help to calibrate the oscillator in your radio if you are able to. I've noticed that an error of 10Hz or less is enough to throw the decode off completely.

Fred,

You were really solid copy here to Pittsburgh.

I've found 30m to be a little more consistent than 20m and quite a bit less activity there. And, it's the highest in frequency we can go for NVIS. It's definitely an underutilized band.

Just a reminder... the paNBEMS call spot is 10.135 USB, 1500 Hz center waterfall (not 1000 Hz center). The reason for the higher spot is that down about 500-1000 Hz is a call freq for Hellschiber.

Thanks for jumping on. It was great to see the strong signal from you there.

John,

It was great having you aboard.

Don't give up on that antenna yet. 40m was really flakey today. I had to get relays from W3FDK from 2 NY stations that are usually very strong to my station. I had no check ins from the 3 call area, which is really rare. I just think the short skip wasn't there. I had KC5SAM in MN stronger than the NY stations.

We'll see how we do next week.

One thing I always point out, when it comes to these nets, is that we're trying to reach each other in specific locations as compared to the playing around that we do on HF where you pick a strong station callng cq. There's a big difference there and nets, especially on 40m and above, really require strength in numbers and good relays, like our pal Rolan did for us this morning!

Every net is fun and I learn something new each time.

HAZARDOUS WEATHER OUTLOOK
NATIONAL WEATHER SERVICE PITTSBURGH PA
347 AM EDT MON JUL 23 2012 THIS HAZARDOUS WEATHER OUTLOOK IS FOR WESTERN MARYLAND...EAST CENTRAL OHIO...NORTHWEST PENNSYLVANIA...SOUTHWEST PENNSYLVANIA...WEST CENTRAL PENNSYLVANIA...NORTHERN WEST VIRGINIA AND NORTHERN PANHANDLE OF WEST VIRGINIA. .DAY ONE...TODAY AND TONIGHT. THERE IS A SLIGHT RISK FOR SEVERE THUNDERSTORMS THIS AFTERNOON.
THE PRIMARY THREAT IS DAMAGING WINDS...ALTHOUGH ISOLATED LARGE HAIL OR A TORNADO CANNOT BE RULED OUT.

.NEAR TERM /THROUGH TONIGHT/... MODEL INITIALIZATIONS SEEM TO HAVE STARTED OFF THE WAVE OVER THE
CENTRAL GREAT LAKES A BIT TOO FAR TO THE NORTH THIS MORNING. AS A RESULT...THE MODELS...INCLUDING THE HRRR REALLY ARE FAILING TO YIELD A DECENT PORTRAY OF THE ONGOING SCENARIO UPSTREAM OF THE CWA. CONVECTION HAS DEVELOPED IN THE EARLY MORNING HOURS FROM THE
THUMB OF MICHIGAN BACK TOWARD NORTHERN INDIANA JUST AHEAD OF THE 500 MB SHORT WAVE TROUGH AXIS. THIS IS COINCIDENT WITH THE NOSE OF A MODEST ROUGHLY 30 KT LOW LEVEL JET NOSE ORIENTED IN A NORTHWEST TO SOUTHEAST DIRECTION THAT IS DIVING INTO THE LOWER GREAT LAKES. LAPSE RATES AHEAD OF THIS WAVE IN THE 850-700 MB LAYER ARE EXTREMELY IMPRESSIVE PER SOUNDINGS...EVEN THOUGH CAPE IS NOT NECESSARILY SURFACE BASED AT THIS HOUR. HOWEVER...ELEVATED CAPE VALUES ARE RUNNING UP TOWARD ROUGHLY 1000 J/KG WITH THIS
WAVE...SO CONVECTION SHOULD HAVE NO PROBLEM HOLDING TOGETHER UNTIL THE BOUNDARY LAYER WARMS MORE LATER THIS MORNING. AS THE AFTERNOON ENSUES AND THE SHORT WAVE TROUGH MOVES FARTHER
SOUTHEAST...CAPE VALUES RISE UP TOWARD AND ABOVE 2500 J/KG WITH BULK SHEAR VALUES FROM THE NEWEST GUIDANCE RUNNING UP TOWARD 45 KTS. ADDITIONALLY...0-3 KM HELICITY VALUES NOW RUN UP IN EXCESS OF
350 M2S-2 AND 0-1 KM HELICITY SURPASSES 150 M2S-2. AS A RESULT...SEVERE CONVECTION IS STILL EXPECTED...WITH DAMAGING WIND AND ISOLATED TORNADOES BEING THE MAJOR THREAT
COMPONENTS. THE HIGHEST THREAT AREA WOULD SEEM TO BE FROM INDIANA TO ZANESVILLE AND ALL POINTS TO THE SOUTHEAST OF THAT
LINE...INCLUDING METROPOLITAN PITTSBURGH...THOUGH NO PART OF THE FORECAST AREA CAN BE RULED OUT FROM THE THREAT OF SEVERE WEATHER AS THE SYSTEM MOVES THROUGH. FRIES

4655. 7.073 USB today

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-23 14:54:53 UTC
From: KB3FXI
Topic: 2811 Message: 4655

Hello all,

I'll be in and out of the shack but monitoring 7.073 USB, 1000 Hz center waterfall with Olivia 8/500 today.

Feel free to jump on and put out a call, or send an FLMSG message with a weather observation or any other short message you'd like to practice with.

If I'm in the shack and see your call, I'll be sure to respond. I may have to shut down in the afternoon if we get the heavy storms we're expecting here in the area of Western Pennsylvania.

-Dave, KB3FXI

4656. New FLMSG with CSV- flmsg 1.1.22 posted

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-23 15:29:13 UTC
From: David Kleber
Topic: 4656 Message: 4656

Hello all,

paNBEMS would recommend that everyone update to this new version of FLMSG. The new version is available at:
http://w1hkj.com/download.html

Make sure you also have the most current version of FLDIGI (3.21.49) and update the file path to FLMSG under config, misc, NBEMS tab. Here is a video that shows the process:

http://youtu.be/psP489NOkg0

For those who don't know, FLMSG is a helper application that lets us send form-based messages which include a checksum calculation. A single bulletin transmission of an FLMSG message can be received by an unlimited number of stations, all of whom can receive and automatically confirm 100% accurate receipt. The forms include many of the most used ICS/NIMS forms, Hospital ICS, Red Cross, MARS and NTS/ARRL Radiogram forms. The system can also be configured so that the received messages pop up automatically in either or both your default web browser and FLMSG. From your default web browser view, you can print an authentic form that you can hand to your served agencies.

This new version also includes the ability to send and receive CSV files, which greatly simplifies the process for sending and receiving spread sheets and database files.

paNBEMS plans on doing some on the air practice with the FLMSG CSV function in our upcoming nets and we encourage other nets to do the same. Please post your feedback and results here on the list.

This is just one more excellent improvement made to the NBEMS suite of programs by Dave, W1HKJ... many thanks to Dave for his continued efforts.

-Dave, KB3FXI

Subject: [NBEMSham] flmsg 1.1.22 posted

http://www.w1hkj.com/

Extensively tested by the Western PA NBEMS net.

Updated the on-line help file and added an Adobe Reader version

http://www.w1hkj.com/downloads/flmsg/flmsg.pdf

```
73, Dave, W1HKJ

Version 1.1.22 - Maintenance Release

  Socket interface
    * Added socket interface for AutoSend file transfer to fldigi
    * Added "auto_sent.csv" file to NBEMS.files/ICS
      (~/.nbems) folder created/appended to each time AutoSend is
      invoked; file contains:
        - header:   FILE_NAME, DATE, TIME
        - dataline: <fname>, YYYY-MM-DD, HHMM Z
      Do not open with Notepad!  Use a spreadheet program or
WordPad
    * Added test for form modification
      - prompt to save when modified
      - inhibit creating wrap file or autosend if modified and not
saved

  Autosave menu
    * move to main menu bar

  Non Standard Radiogram
    * Check box control which allows Radiogram message text
      to contain upper/lower case and punctuation.

  CSV templates
    * Added ability to directly send and receive Comma Separated
Value
      files (spreadsheets)

  Tango pixmaps
    * added source file to repository -- missed this action
      on commit 6f601bb39aac07f38ac469d9d80d20e0af134216
```

Dave,

I sent a short note to you around 12:30 on 7073. But, with no reply I tuned the band - it is essentially flat here. The only stations I am hearing are 500 to 600 miles out. And they are weak. One station in South Carolina was talking to a KA3 in Pittsburgh. Not even a whisper heard here. Apparently something has really jangled the layers above us or I have serious equipment problems. Perhaps again in another day or so.

John,

I've been monitoring 7.073 USB since about 10am.

I just checked back through my receive text window and don't see anything from here in Pittsburgh.

It looks like the short skip is nonexistent again today.

From: Sander Pool
Topic: 4656 Message: 4660

Hi,

I install all the fl* programs in their own directory without a version postfix. In other words every fldigi goes into c:\program files(x86)\fldigi . I see no need to keep all these different fl* programs around and reconfigure fldigi each time I install flmsg. I keep old installers around so in the unlikely event that a new fl* is broken I can revert to it.

Hi Dave (KB3FXI)
Thanks for the tip regarding AFC and PSK. I have noticed some trouble with PSK, where the AFC seemed to lock to a signal, but slightly off frequency. This has resulted in poor copy, and garbled text. Can you advise us regarding the use of AFC for other modes?

>
> Geoffrey,
>
> Very good points. We're a bit spoiled with the flexibility in terms of the tolerance that Olivia and MT63 provide... with both modes, you can be pretty far off on the waterfall spot while still getting perfect copy. The tuning spot on the waterfall can be very critical for a lot of other modes.
>
> I'm also wondering if anyone was running FLDIGI with AFC at the bottom of the screen checked. I would highly advise against ever running any of the psk modes with AFC on. The only time I ever use AFC is when I am receiving a PSK signal that is slightly off, and what I do is toggle the AFC setting on just long enough for the software to fine tune, then I immediately turn it off. If you leave AFC on, you will see your spot on the waterfall start drifting around after the other station stops transmitting.... not good.

> One thing that myself and others have noticed is that these modes do not have very good frequency agility, meaning, you need to be tuned perfectly. One thing you might try doing is calibrating your sound card to make sure it's as close as it can get to the desired waterfall frequency. It would also help to calibrate the oscillator in your radio if you are able to. I've noticed that an error of 10Hz or less is enough to throw the decode off completely.

Hello all,

Due to cost and time constraints, as well as other factors, we closed the paNBEMS.org website and are in the process of updating all current and relevant information from paNBMES to the paNBEMS Yahoo News Group (http://groups.yahoo.com/group/paNBEMS/).

paNBEMS will continue active training session on the air and will continue to offer our full fledged support to any and all amateur radio operators and groups (regardless of affiliation).

We will continue to produce additional training video's and other training documentation to help you and your groups to effectively use and promote the use of the NBEMS suite of programs.

I have just updated the Links section of the paNBEMS Yahoo Group with our most current and relevant paNBMES video's (http://groups.yahoo.com/group/paNBEMS/links).

As always, we're open to suggestions, comments and recommendations. Feel free to post them here to the paNBEMS Yahoo Group or to my email address at kb3fxi at yahoo dot com.

I would much rather have comments posted here to the group as we can all learn from each other's thoughts and experiences.

Please spread the word on our activities and feel free to forward the link to the group here to anyone you feel might be interested in NBEMS.

-Dave, KB3FXI

Hi Dave,

if you feel you need a wiki or blog to record and present your NBEMS knowledge then wikispaces.com and blogger.com are free options that can supplement what a yahoo group offers. I maintain a couple of wikis on wikispaces to maintain FAQs for yahoo groups that I moderate. Free and good, an excellent combination.

Of course there are other options as well but these are two that I am familiar with.

It has been a good go hasn't it and a learning experience..
Those daily pipeline connections to Dave KB3FXI and to Don VA7DGP sure helped in the learning curve of things, thanks Dave for all your help when I got started with this....
It sure has made a difference with our local group and with SATERN as I and a few others have really pushed the NBEMS stuff and FLDIGI..
And of course thanks to those who have spent endless hours making and testing the software and making it operate on all systems, BRAVO..

Cheers

From: KB3FXI
Topic: 4664 Message: 4669

Fred,

Your participation is greatly appreciated, by more folks than you know. You've added more value to NBEMS than you might think, by being there, on the air, and helping folks test, not to mention all the work you've done in your neck of the woods and with SATERN.

And while we're on the subject of NBEMS movers, let's certainly not forget the real mover behind NBEMS, which is Dave Freese, W1HKJ. The amount of time and hard work he has put into NBEMS is mind-boggling.

I can't tell you how many occasions that we have popped off suggestions to Dave for additional features or changes in NBEMS. On several occasions, I'd get a response along the lines of "why would anyone need that". Then I would explain further and hear nothing for a day or so (sometimes less). Then, the next thing you know, he's announcing a new version, with full implementation of our suggestions.

W1HKJ is a really good guy who deserves a great debt of gratitude from every user of NBEMS.

4670. Successful Test of FLMSG / CSV

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-28 17:18:15 UTC
From: KB3FXI
Topic: 4670 Message: 4670

Hello all,

I checked in on the NY NBEMS net on 40m this morning. At the conclusion of the net, N2NOV (NCS) and I send and received two different csv files (1.2k file size and 2k file size) on MT63 1k long.

Both files transferred perfectly with FLMSG auto pop up.

Here's a video screen shot I did of N2NOV's FLMSG/CSV file being received at my station.

http://youtu.be/YJW680pIrw4

We'll be testing the FLMSG/CSV functionality tomorrow (7/29/12) on the paNBEMS nets.

Make sure you have the latest versions of FLDIGI and FLMSG from www.w1hkj.com and check the link section of paNBEMS Yahoo Group for instructional video's on setup and config.

Hope to see you on the nets tomorrow morning.

Fred,

I'm parked on 7.073 USB, 1000 Hz waterfall center, 8/500 with about an s5 noise level. I'll be in and out of the shack but I'll try to pop on around 3pm ET and put out a call. If nothing heard, I'll got to 14.064 1500 Hz center waterfall on 8/500 olivia around 3:15.

4673. MT63/ paNBEMS nets/csv

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-29 16:31:34 UTC
From: FRANK
Topic: 4673 Message: 4673

Sat morning on nyNBES net and Sunday morning on paNBEMS net(80m) When the bulletins were semt in MT63/500 I was unable to adjust the center freq. I checked other modes and found this only on MT63. I can copy MT63 1000 and 2000 because the center freq's go to 1000 and 1500 automatically, but on MT63 500 the center freq jumps to 750 and that's when I discovered I could not change it with either the buttons or clicking in the water fall. I'm using Flmsg .49.
I uninstalled it using the Fldigi uninstaller and reinstalled with the same result. I tried an earlier verson (.45) with the same result. MT63 is the only mode this occurs.
Anyone have a suggestion?

I copied ncs on 80 with very light print and 40 wih s8 sig &good print.
I copied the csv file successfully.

73, Frank N3FLL

4674. Re: MT63/ paNBEMS nets/csv

Frank,

In the net script, before the switch to MT63, we advise using the VFO of your rig in fine tune mode to tune to the center marker tone (tune tone) and we give about 20 seconds for stations to make the adjustment.

This is a throw-back to the old versions of FLDIGI that had strictly fixed tuning of all MT63 modes at the bottom frequency of the waterfall of 500 Hz (i.e. MT63 2k long would be center at 1500 hz, 1k at 1000 hz and MT63 500 Hz centered at 750 Hz).

However, quite a while ago, MT63 in FLDIGI was modified so that we now have the option to manually tune the mode to any spot on the waterfall.

Go to FLDIGI, Configure, Modems and click the MT63 tab. There will be a selection to allow manual tuning. Check that box, click save, then close. Now you will be able to tune by clicking on the waterfall.

Be advised, though... if you're running MT63 2k long on FM, you may want to advise your ops to uncheck the "allow manual tuning" as a way to eliminate the common error of not having all stations centered on the correct spot.

From: KB3FXI
Topic: 4675 Message: 4675

Hello all,

We had a good turnout on both 80 and 40 today with fairly decent conditions.

On 7.073 USB we sent our first ever FLMSG/CSV file during a paNBEMS net and had a few folks after the net confirm 100% and their appreciation for the new CSV functionality.

Thanks to all for checking in and we're looking forward to doing more work with FLMSG/CSV for sending and receiving spread sheet and database files.

Check out the instructional videos on FLMSG configuration and the CSV workflow at:

Problem solved, thanks Dave. I read somewhere (probably here)about unchecking the manual tune box for MT63 on FM. That's what I had done because that's what we use for the CCAR NBEMS net.
Thanks again and 73, Frank N3FLL

Good deal, Frank... glad to be of help.

Thanks, BTW, for checking in this morning.

We'll be popping off some CSV files next week on both the 80m and 40m paNBEMS nets.

In the meantime, let me know if you want to make a sked for some one on one, on the air testing.

Denny,

There was a 1200 Baud packet modem in one of the old alpha versions, but I'm not aware of packet in any of the recent FLDIGI releases.

What exact mode are you working with?

Sound card packet modems are very picky on audio levels... you have to get the levels just right and usually a little hotter levels than we would use on MT63 seem to do better.

PS I need help with the NBEMSsham group. I have applied to receive Email from the group. Have been accepted.
      The problem is when I try to send an Email, I het an error message that says I am not a member and must apply.
      So I asked again to become a member and get an automated answer that says I am already a member. Can anyone help?
      And I can not figure out how to ask for help from Yahoo.

4682. Autosend re sending csv msg

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-07-30 16:28:17 UTC
From: FRANK
Topic: 4682 Message: 4682

I sent a csv file this morning and it would re send. After that QSO I read the NBEMSham digest 990 and the very first post addressed that issue. Using windows I'm used to double clicking and double clicking "autosend" will cause it to keep re sending as many times as you click.

73,
Frank N3FLL

A 9-1-1 outage has occurred in Berks County. Due to a phone company problem. Berks County 9-1-1 is unable to receive any 9-1-1 calls. Any Berks County resident needing 9-1-1 service must call 610-655-4921 until further notice. This is Pennsylvania Emergency Management Agency with an emergency alert activation for Berks County.

4686. email lost in the abyss - the case for manned ops in amateur radio emcomm

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-02 18:45:24 UTC
From: KB3FXI
Topic: 4686 Message: 4686

Hello all,

Earlier this morning I attempted to forward the PA Alert email that I received regarding the Berks Co PA 911 outage. I received the message alert from PA Alert at 12:58pm ET and attempted to forward the message to the paNBEMS list at 1:02pm ET, but the message never made it to the list here.

I checked the paNBEMS Yahoo Group and the profile showed "no activity" but all of our previous messages were available for viewing.

I'm guessing there was a burp with Yahoo Groups and the previously forwarded message was lost in the abyss.

One of the main philosophies that w1hkj, author of the NBEMS software, has always put forth is that NBEMS is primarily designed as a system for manned operations for data transfer and relay.

Automated digital radio relay to email on systems such as Winlink, Winmor, PSKMail and others are indeed a useful tool, but in my opinion, are no substitute for manned operations.

-Dave, KB3FXI

Follow-up...

I just got the pending forward from earlier and killed it since I had success with the 2nd forward from the PA Alert list regarding the Berks Co PA 911 outage.

That was over a 3 hour delay to our Yahoo email group.

Dave,

> That was over a 3 hour delay to our Yahoo email group.

It is worth noting that Yahoo!'s terms of service state that "YAHOO! AND ITS SUBSIDIARIES, AFFILIATES, OFFICERS, EMPLOYEES, AGENTS, PARTNERS AND LICENSORS MAKE NO WARRANTY THAT (i) THE YAHOO! SERVICES OR SOFTWARE WILL MEET YOUR REQUIREMENTS; (ii) THE YAHOO! SERVICES OR SOFTWARE WILL BE UNINTERRUPTED, TIMELY, SECURE OR ERROR-FREE;..." and so on.
(paragraph 19.b. at
http://info.yahoo.com/legal/us/yahoo/utos/utos-173.html).

It is also worth recalling that contrary to our everyday experience with email responsiveness, that the standards for email handling stipulate that, for example, a handler of a email message should attempt for 4 to 5 days to deliver the message before giving up and passing a message back to the sender (which itself might take more time). See RFC 5321 linked from http://en.wikipedia.org/wiki/Internet_mail_standard .

These are some of the reasons that make manned message handling on resilient and infrastructure-lite amateur radio so useful.

Being curious, I noted that my message referenced above was posted at 13:50:39-0000 (UTC time) and appeared on Yahoo's list at about 15:16 UTC, a delay of about an hour and a half.

Yahoo's echo of that message into my email inbox took another 2 minutes.

John,

When handling emergency traffic, it is critical to know that the message was delivered. If at any point the message hits email from a robot radio to email relay station, we have no way of knowing that the message was delivered.

But a manned station can make a digital radio message to email relay and request that the recipient acknowledge that they received and it was delivered to the intended recipient.

Hi,

I just put up a 40m doublet with 300 ohm feed line to my tuner. It might be a bit too whacky for 20m for my internal tuner but it tunes 40m just fine.

I have to say that 40m is a lot noisier than 20m in the first few minutes I've tried it. I hear voice chatter everywhere but it's s1, s2 so very low.

Anyway, I'll be going upstairs for a bit but if you'd like to try a transfer, let me know. I'll send CQ using Olivia 8/500 every now and then.

If I need to change frequencies, let me know.

As a follow up to this very useful message from w3iag...

Sometimes sound cards (usually the higher end ones) will have their own settings icon under Windows Control Panel. You should check to see if you find a separate icon there, open it up and look for advanced settings. Disable any kind of noise reduction or effects (like room, hall or simulated surround).

Thanks again to w3iag for bringing this valuable message to the net. We could use some more traffic and info during our net sessions.

Hi,

every device, advanced or not, has its own settings under windows. Some have very few controls but you can always rename them for example. My microham USB-III appeared with very generic names like line in that I changed to 'microham in' and 'microham out'. Fldigi and other software will have to be told again which sound interface to use after that.

Probably good advise to disable NR on the computer but we're also playing with NR on the radio so perhaps better advise would be to 'try and see'. This is of course one of the values of nets like this and also the exchange Dave and I had yesterday. I didn't have my preamp on and that hurt my ability to hear him.

Naturally each sound device and even each program has its own sound levels, regardless of sophistication level. This makes sound setup a bit more tricky than it's sometimes 'advertized'.

4701. Suggestion for the net

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-05 17:46:34 UTC
From: Sander Pool
Topic: 4701 Message: 4701

Hi,

as I understood it the net is real (not a drill) and when the NCS asks for checkins we should only say we have traffic if we have -real- traffic related to an actual event. This means that on most days there will be no traffic and there's bandwidth to transmit practice traffic.

Might it make sense to have people indicate the -kind- of traffic they have so NCS can prioritize actual traffic over practice traffic? Should we be in the habit of prefixing practice traffic with ***drill*** or some other string?

W1SOP Ridgefield, CT ***drill*** 1 message

vs.

W1SOP Ridgefield, CT 1 message

where the latter is an actual message that should get priority over practice traffic?

When we practiced NBEMS at the REST a few days ago we prefixed every transmission with 'this is a drill' type text.

Curious what others think. Maybe the net protocol already has this provision and I simply need to be educated. I did not indicate I had traffic on my checkin because I had no -real- traffic. If it helps the net I could easily have a short practice flmsg prepared for net transmission next time.

73,

Sander W1SOP

Sander,

Going a year or so back on the nets we used to go for comments depending on conditions and number of check ins. Just about the same time, I was trying my best to encourage folks to bring test FLMSG messages, but only got a very few folks to bring messages.

As net attendance went up, we decided to drop the comment rounds to try to encourage more informal FLMSG messages but we still get only a handful of folks who bring info or test messages to the net.

I like the idea of somehow designating message priority as you describe, but we're still working on basic net procedures and following the exact direction of net control.

I'll add some script to the net callup encouraging test FLMSG messages for questions and comments. If we start getting more folks willing to test with FLMSG, then I'd like to work on the message priority designations.

How about the idea of taking the lead from NTS who have been at this a lot longer than we have. No sense is reinventing the wheel:

R - Routine
W - Welfare
P - Priority
E - Emergency
TR - Test Routine
TW - Test Welfare
TP - Test Priority
TE - Test Emergency

Our current check in procedure with 1 piece of traffic is:

Call, Loc (or Co if in PA), number of messages - destination call

If procedure is followed, here's how a check in with 1 message for you would look:
kb3fxi, Allegheny, 1 - w1sop

So, let's add the designator, which is pretty easy:
kb3fxi, Allegheny, 1TE - w1sop

Another thing to consider is multiple messages to multiple stations:
kb3fxi, Allegheny, 1R - w1sop, 1TE - kb3xyz, 1TW - kb3dsp

So, from someone checking in on the net, this looks like magic code and certainly doesn't follow the plain language requirement for ICS/NIMS.

So, lets look at plain language:
kb3fxi, Allegheny, 1 Routine for w1sop, 1 Test Emergency for kb3xyz, 1 Test Welfare for kb3dsp

In spite of chewing up a bit of extra net time with spelling it out, I think I prefer to stick with the ICS/NIMS philosophy of plain language.

Any thoughts?

On a regular Radiogram when written on the Radiogram form, the use of single characters are encouraged such as R W P and E Those who use the radiogram (NTS) are familiar with this. This could be considered "plain language" Those who are involved with EmComm should know these characters.

I for one would encourage this use and as new hams join the ranks they may fall into suit without retraining.

Steve,

I think we should stick with plain language on paNBEMS for universal ICS/NIMS compliance for our general net procedures, but I'd like to see us explore some of the other net system procedures as well.

Would you be willing to bring some FLMSG messages that detail NTS procedures followed by some NTS/ARL Radiogram test messages? I think it would be interesting for folks to learn about message details in the NTS form, message routing on the NTS nets, etc.

Same thing could go from an experienced MARS op explaining their procedures, or someone very familiar with working with the various ICS forms.

At the very least, both here on the email list and the nets, we would certainly appreciate our participants bringing info from their area or local nets, drill reports, interesting tips like what w3iag brought to the net this morning... even just net reports which I appreciate coming regularly from kb3pcy.

On a regular Radiogram when written on the
Radiogram form, the use of single characters are encouraged such as R W P
and E Those who use the radiogram (NTS) are familiar with this. This
could be considered "plain language" Those who are involved with EmComm
should know these characters.

I for one would encourage this use and as
new hams join the ranks they may fall into suit without retraining.

Steve,

I think we should stick with plain language on paNBEMS for universal ICS/NIMS compliance for our general net procedures, but I'd like to see us explore some of the other net system procedures as well.

Would you be willing to bring some FLMSG messages that detail NTS procedures followed by some NTS/ARL Radiogram test messages? I think it would be interesting for folks to learn about message details in the NTS form, message routing on the NTS nets, etc.

Same thing could go from an experienced MARS op explaining their procedures, or someone very familiar with working with the various ICS forms.

At the very least, both here on the email list and the nets, we would certainly appreciate our participants bringing info from their area or local nets, drill reports, interesting tips like what w3iag brought to the net this morning... even just net reports which I appreciate coming regularly from kb3pcy.

Sander,

Going a year or so back on the nets we used to go for comments depending on conditions and number of check ins. Just about the same time, I was trying my best to encourage folks to bring test FLMSG messages, but only got a very few folks to bring messages.

As net attendance went up, we decided to drop the comment rounds to try to encourage more informal FLMSG messages but we still get only a handful of folks who bring info or test messages to the net.

I like the idea of somehow designating message priority as you describe, but we're still working on basic net procedures and following the exact direction of net control.

I'll add some script to the net callup encouraging test FLMSG messages for questions and comments. If we start getting more folks willing to test with FLMSG, then I'd like to work on the message priority designations.

How about the idea of taking the lead from NTS who have been at this a lot longer than we have. No sense is reinventing the wheel:

R - Routine
W - Welfare
P - Priority
E - Emergency
TR - Test Routine
TW - Test Welfare
TP - Test Priority
TE - Test Emergency

Our current check in procedure with 1 piece of traffic is:

Call, Loc (or Co if in PA), number of messages - destination call

If procedure is followed, here's how a check in with 1 message for you would look:
kb3fxi, Allegheny, 1 - w1sop

So, let's add the designator, which is pretty easy:
kb3fxi, Allegheny, 1TE - w1sop

Another thing to consider is multiple messages to multiple stations:
kb3fxi, Allegheny, 1R - w1sop, 1TE - kb3xyz, 1TW - kb3dsp

So, from someone checking in on the net, this looks like magic code and certainly doesn't follow the plain language requirement for ICS/NIMS.

So, lets look at plain language:
kb3fxi, Allegheny, 1 Routine for w1sop, 1 Test Emergency for kb3xyz, 1 Test Welfare for

kb3dsp

In spite of chewing up a bit of extra net time with spelling it out, I think I prefer to stick with the ICS/NIMS philosophy of plain language.

Any thoughts?

Hi Dave,

sorry for the late reply. I mulled this over a bit and then reread the thread. Thanks for considering my suggestion. I think we're on the same page. Plain English is preferable to me at this point. We should balance structure for effectiveness vs. ease of use to attract and retain users.

I also prefer plain text for the designators.

The other benefit of this strategy is that it allows people to check into the net, receive urgent traffic if it is present and then check out again. These nets can be quite time consuming and it may be worthwhile to look into ways to allow efficient use of the net while still providing practice time towards the end for those who are interested. Getting a prioritized list of traffic at the start allows that while encouraging everyone to contribute a short test message as well. Note 'short'. MT63 isn't -that- fast and a short message is good practice too without a couple of stations hogging the airwaves.

73,

Sander W1SOP

Aaron,

I don't know much about AM but if I understand it correctly, there are only a few limited areas on HF where it's designated which are voice only areas. And, if I understand AM correctly, if you key up with no audio (voice or digital) you're still going to be transmitting a very wide carrier (5-6k?).

I don't think that AM is practical or provides any kind of an advantage for carrying our narrow band digital comms.

Maybe someone else could jump in and add to, or correct, anything I've stated.

It's generally 8k wide and really it's not a good match for digital.

It will guarantee 100% duty cycle too so it's harder on the transmitter final stage than even the digital modes themselves on SSB.

You would essentially be wasting the power of the second sideband when doing digital modes and the mode itself would gain you nothing. Basically you are wasting energy on the carrier and the opposite sideband when it doesn't serve a purpose.

It *will* work, as FM does work, but SSB is much more efficient all around.

I also imagine being AM that you would decrease the effectiveness of the signal compared to SSB.

Thank you for your thoughts Dave. I know we have experimented with some modes on FM. I was just curious if there were any modes that would work on AM.

I doubt that situation would ever happen, but if some kind of emergency situation or disaster happened and the only radio equipment I could find was a cb, what would I be able to do...

Also interesting to note that my two other JA contacts were both on 17m. As I recall, one was around 5:30am and the other around 11am, just like today.

17m is nice because it's not nearly as busy as 20m when the bands open. 17m is also about the only band on which I do any phone ragchew... folks on 17m from all around the world seem to be a little more likely to chat a bit rather than trading the obligatory fake 599 report and then dropping you like a hot potato (not my cup of tea).

Lastly regarding 17m... you can go there to escape the contests.

-Dave, KB3FXI
paNBEMS

P.S. I think someone once told me that a 40m dipole will get you in the ballpark for 17m, maybe even without a tuner

Aaron,

You would be able to do all the same stuff we're doing now with an AM CB, but it's not legal to send any data (including CW) on the CB channels.

If you had real emergency traffic and CB was your only choice, I wouldn't worry about the rules.

Thank you for your thoughts Dave. I know we have experimented with some modes on FM. I was just curious if there were any modes that would work on AM.

I doubt that situation would ever happen, but if some kind of emergency situation or disaster happened and the only radio equipment I could find was a cb, what would I be able to do...

Thanks for the report Dave, will have to give 17m a try. I was running WSPR on 40m yesterday and it was pretty cool to see it open up as the sun went down. During the day I could hear and reach a few stations East of the Mississippi but then as the Atlantic went dark Europe popped in and then later even Australia and South America. All on 5W of course.

Only spent a few minutes on 20m PSK31 last night but had a QSO with Guatamala. Reaching Japan would be outstanding, let me see if I can hear him.

KB3LSM and Others

When you are using SSB, you are on AM. The proper name for the mode is
single sideband suppressed carrier AM.

Jim,

The rock guitarist and ham, Joe Walsh and Bill Heil are both active on 40m AM. Both being in the music business, they admit that they're spoiled with the audio quality! Look down around 7160 KHz.

What if you had 3 fairly close stations (within 5 miles or so) but they didn't have ham gear but they did have CB (maybe volunteered by a trucker)?

For emergency traffic only, you could do acoustic coupling with no problem.

Same rules go for FRS, but for life and death traffic, I wouldn't hesitated using FRS if that was the only means available.

What's a shame is, the MURS channels do allow data but there's so few radio's made for that service.

The situation would be dire where you had to work with whatever equipment
you could scrounge.

I don't think the OP means for general use, but in a case where all you
could scrounge that was working was potentially some AM only CB rigs (there
are a whole lot more of them kicking around than ham gear)

They would certainly work for that.

Basically any radio that will transmit audio will do the job with any of
the soundcard modes.

On a demo basis only I've used a Dakota Alert base station MURS radio
with MT63-2000 quite successfully. These radios are about $70, put out
the 2 watt limit from what I can tell and have a separable antenna.

We could one day find ourselves in a dire situation where we don't have enough radio gear.

Think of a staging area in a disaster where trucks are bringing in supplies... some of which then sit overnight or longer. Just about any of those trucks will have a CB. I'm sure in an emergency situation, any of those truckers would be glad to let us use their CB for emergency traffic.

I have a CB in my car and have it on anytime I'm traveling. I miss it when I'm in my wife's care. You have to learn to use your brain to filter out all the nonesense (it's almost as bad as 75m at night), and probably wouldn't want to have the CB on with kids in the car, but you do get a lot of good information, far beyond where the police speed traps are set up. Truckers report on traffic conditions, accidents and debris in the road.

One time there was a major fire about 2 miles from where my son was playing little league baseball. All you could here were emergency vehicles over the hill coming in from every direction. I put on our local AM broadcast station and learned nothing. Then I got on a local ham simplex frequency... then on a local repeater. Not only did I learn nothing, I didn't even get a reply. Then, I remembered we had a cb under the seat of my wife's car. I plugged the power into the cig lighter and popped the cheap magmount on the roof and got a detailed description of what was a serious fire in the town down the hill. It was a truck driver stuck in the traffic who immediately replied. He gave me details at to what road and lanes were closed and where the southbound traffic was being detoured.

It was a good lesson to not discount CB.

True, in my mind too, this would probably never happen, but someone asked me this question recently that if something really really bad happened in this country, how would we communicate and my answer was cbs, because they are the most readily available plug and play communication device that doesn't require really any network...

What are the rules with the MARS freqs? I think 151.820 is one of them, my neighbor and I were experimenting with his new baofang ht he bought at the last hamfest.

through one of my GMRS radios (illegal) but what's the point?

So maybe I'm missing the utility of sending NBEMS over CB/AM. Aaron,
could you explain the scenario a bit more? Who do you plan to transmit
too over CB?

Not MARS, but MURS. It's an open, unlicensed VHF business band.

Aaron,

Take that radio and "baofang" him over the head with it if he opens that up and transmits on a MARS freq without the proper credentials! hihi

A definate no-no for hams to tx on MARS freqs. BUT... if there's coordination with the MARS folks, we can do cross band comms where we LISTEN to their TX freq and send on ours. They would LISTEN on ours and talk on theirs. This is done every year on the Military to Amateur Armed Forces Day Crossband Test, one of my favorite annual exercises.

I'd love to see us work out an exercise to do the cross band comms with MARS outside of the annual event. A monthly or quarterly drill would be great practice.

What if you had 3 fairly close stations (within 5 miles or so) but they didn't have ham gear but they did have CB (maybe volunteered by a trucker)?

For emergency traffic only, you could do acoustic coupling with no problem.

Same rules go for FRS, but for life and death traffic, I wouldn't hesitated using FRS if that was the only means available.

What's a shame is, the MURS channels do allow data but there's so few radio's made for that service.

I doubt that it would be legal to tx with the baofang opened up to MURS even if you kept your max power to 2w as the transceiver needs to be type accepted for the MURS service:

Interesting...

Something funny I should mention. He bought the dual band baefong ht for I think $70 brand new from the vendor at the North Hills Hamfest last month. We were playing with it right out of the box and it transmits everywhere it receives. I mean everywhere... Not sure how they can sell something like that, but they did...

Chris,

The exception to this rule are digital radios (including cell phones). The digi codex just messes the audio up too bad to even pass MT63. I've tested on a few different public safety radios including public safety Icom rigs and a Motorola digital system with about only 30% copy on a strong signal channel.

MT63 2k long will literally work over 2 cups and a string, for whatever that's worth! hihi (we actually tested it once many years ago). Baby monitors work great, too, for one way (again, FWIW).

4734. Updated FLMSG -1.1.23 posted

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-08 21:01:22 UTC
From: David Kleber
Topic: 4734 Message: 4734

Hello all,

I'd recommend making this upgrade.

Download at http://w1hkj.com/download.html

Also, check to see if you have the current version of FLDIGI while you're there.

When you do the update to FLMSG, remember to update FLDIGI under config, misc, NBEMS tab to point the "Find FLMSG" box with the path to the new FLMSG executable. Here's a video to show how it's done:

http://youtu.be/psP489NOkg0

Version 1.1.23 - Maintenance release

  MARS edit cursor
    * Added code to retain position of edit cursor

  CSV table view
    * added table view dialog for CSV files
    * added separate button for editing CSV files
      - user is advised that the modified file must be
        re-imported into flmsg

  Compression
    * Added compression / decompression to data contents
      - data is compressed IF and ONLY IF the data stream is
        reduced in size.
    * Compression can be applied to all flmsg wrapped files,
      whether stored or auto sent.
    * Corrected error in m2s saved Radiogram file

  Hurricane report
    * Hurricane wx report form iaw WX4NHC

How would you tune FLDIGI for an AM signal? You would have to be set up on the upper sideband for it to decode correctly. Lower frequencies to the left, higher to the right. Hit the tune button and see three frequencies emerge. Tell the receiving station to find the upper of the 3 and center the waterfall there?

4736. Re: [paNBEMS] Re: Good data mode for AM?

Yahoo group: paNBEMS (2012 — 2018)

From: Rolan O. Clark
Topic: 4708 Message: 4736

If both stations were AM just tune it in like any AM station and I would think the AM detected signal would look the same on the waterfall. If you are AM then any station on SSB upper side band wouldn’t know the diff except on AM 2/3 of the power is in the carrier so that leaves 1/3 of the power in the two sidebands, or, 1/6 of the power in each sideband. About 7.8 db down from the same SSB power.

I believe there is no theoretical or technical reason to use AM, in fact, a lot of reasons not to but I know it was posed as a what if scenario.

Take care,

Dave... et al

Yes... please do not discount CB for Ecom use...

If you have any sort of large scale, long term disaster... you will be having truckers bringing supplies into the area(s) es how are you going to communicate w/ them for logistical purposes? A few may have a Ham license es a 2m rig... but you can be assured that just about every one of them will have a CB rig (es a substantial system at that). For that reason, in the District 7 Ecom Matrix, I have listed that each EOC should have a SSB CB rig in their Ecom equipment inventory. This allows for Trucker logistics to be assured es does so on a separate Net frequency, thereby not adding to the congestion on the Ham Ecom Network(s).

It also has a use for CERT, as most of them are not licensed for Ham bands.

May be off topic of the original thread, but the opportunity presented itself, to throw it out there. Besides, as Dave points out w/ his other comments, to this thread, part 99 is there for a reason, when it's needed.

I applaud the interest by Hams, new or otherwise, when they explore using the bands for different modes / applications. The dissertation(s) resulting, help to educate new es old alike, who may otherwise remain ignorant to something es end up getting educated by receiving a "pink slip" from an "OO", for a violation that possibly could have been prevented, by participation in a thread on the matter.

On 8/8/2012 12:23 PM, David Kleber wrote:

We could one day find ourselves in a dire situation where we don't have enough radio gear.

Think of a staging area in a disaster where trucks are bringing in supplies... some of which then sit overnight or longer. Just about any of those trucks will have a CB. I'm sure in an emergency situation, any of those truckers would be glad to let us use their CB for emergency traffic.

I have a CB in my car and have it on anytime I'm traveling. I miss it when I'm in my wife's care. You have to learn to use your brain to filter out all the nonesense (it's almost as bad as 75m at night), and probably wouldn't want to have the CB on with kids in the car, but you do get a lot of good information, far beyond where the police speed traps are set up. Truckers report on traffic conditions, accidents and debris in the road.

One time there was a major fire about 2 miles from where my son was playing little league baseball. All you could here were emergency vehicles over the hill coming in from every direction. I put on our local AM broadcast station and learned nothing. Then I got on a local ham simplex frequency... then on a local repeater. Not only did I learn nothing, I didn't even get a reply. Then, I remembered we had a cb under the seat of my wife's car. I plugged the power into the cig lighter and popped the cheap magmount on the roof and got a detailed description of what was a serious fire in the town down the hill. It was a truck driver stuck in the traffic who immediately replied. He gave me details at to what road and lanes were closed and where the southbound traffic was being detoured.

It was a good lesson to not discount CB.

The situation would be dire where you had to work with whatever equipment you could scrounge.

I don't think the OP means for general use, but in a case where all you could scrounge that was working was potentially some AM only CB rigs (there are a whole lot more of them kicking around than ham gear)

They would certainly work for that.

Basically any radio that will transmit audio will do the job with any of the soundcard modes.

On Wed, Aug 8, 2012 at 11:53 AM, David Kleber <kb3fxi@...> wrote:

What if you had 3 fairly close stations (within 5 miles or so) but they didn't have ham gear but they did have CB (maybe volunteered by a trucker)?

For emergency traffic only, you could do acoustic coupling with no problem.

Same rules go for FRS, but for life and death traffic, I wouldn't hesitated using FRS if that was the only means available.

What's a shame is, the MURS channels do allow data but there's so few radio's made for that service.

Right but who would hear you? I could probably rig fldigi to transmit
through one of my GMRS radios (illegal) but what's the point?

So maybe I'm missing the utility of sending NBEMS over CB/AM. Aaron,
could you explain the scenario a bit more? Who do you plan to transmit
too over CB?

I can attest that use of CB in certain circumstances does help in an emergency. Here in NYC during the early days of 9/11, we used CB on ċhannel 19 to talk to the truckers bringing supplies in from every single direction (North, West and South). We were able to get them to stage at certain rest stops and guide them in towards particular warehouses set up to receive the donated supplies.

Hi Ed... et al

In the absence of any official promulgated Ecom standard addressing the use of CB, within the plan, the FCC last provided guidelines were to use any of your FCC issued CB call(s), or... make up one using your name and zip code. Most had a previous call, es is the better of the suggestions.

In most Ecom situations, any time you may have to man any communications, in a network, that position will more than likely have a "tactical call sign" assigned to it, es that tactical call would be the call you would use. Naturally, your personal CB call would be used, by you, if you are entering the CB Ecom network w/o any particular assignment. Again, any promulgated Ecom standard(s), you or your group may act under, in your area, will apply.

A few of our SATERN members and groups in Ontario have actually involved or do involve some of the REACT and FRS radio groups in and around scenarios all depending of course on the situation or where they are needed.
REACT has been around for a long time and still has a good name in many parts.
Again when the ship hits the sand we will need all the help we can get be it big or small...

Fred,

On the subject of FRS... I worked the Flight 93 crash site on 911 in Somerset PA and had to make at least 5 drives back and forth to the Salvation Army "Sally Wagon" that was deployed in the heart of the scene about 1/4 mile from staging where I was stationed.

Since then, I carry 2 FRS radios in my go bag with a few extra AA batteries.

4747. NBEMS Net Operations presentation (PPT & PDF)

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-17 22:06:44 UTC
From: David Kleber
Topic: 4747 Message: 4747

Hello all,

We just updated the NBEMS Net Operations PowerPoint presentation to the paNBEMS yahoo group. There is also a PDF of the same presentation. Here's the address:
http://groups.yahoo.com/group/paNBEMS/files/
Then go the "Training Presentations" folder.

All are welcome to modify the PowerPoint for individualized presentations. I only ask that you keep the last two slides unchanged.

Feel free to drop me a line at kb3fxi at yahoo dot com if you have any questions.

paNBEMS net schedules are available at our Yahoo Groups page:
http://groups.yahoo.com/group/paNBEMS/

All are welcome to check in and bring messages to the net (or just monitor)... practice makes perfect and it's fun, too. We'll be working a bit more with CSV files this Sunday morning as well as passing some other formatted messages. Please make sure you have the latest versions of both FLDIGI and FLMSG downloaded and installed from
http://w1hkj.com/download.html

If you have comments or info for the net, please, if at all possible, bring them in the form of an FLMSG message.

Thanks!

-Dave, KB3FXI

4748. 7.073 USB today

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-18 17:37:28 UTC
From: David Kleber
Topic: 2811 Message: 4748

Hello all,

First let me welcome aboard several new members to the list who have joined over the last week or so... we had a bit of a surge with new folks coming on board and we're now just one shy of 400 here on the paNBEMS yahoo group list.

20m is is pretty rough shape today so I'll be hanging on 7.073 MHz USB, 1000 Hz center waterfall with olivia 8/500.

I would like to do a test transmission of a FLMSG/CSV file, compressed. If anyone is available, please jump on and put out your call. I should be monitoring 7.073 through about 4:30 pm ET. At 4:30pm ET today (unless I get pulled out of the shack), I'm going to put a few calls out on 30m 10.135 USB, 1500 Hz center waterfal with olivia 8/500.

Please make sure you have the latest versions of FLDIGI (3.21.50) and FLMSG (1.1.23) from http://w1hkj.com/download.html

Hope to see you on the waterfall, if not today, tomorrow morning for our regular net sked:

paNBEMS weekly HF Net starts at 10:00 AM local time every Sunday morning with Net Control call on 3.5835 MHz USB using 8/500 Olivia, 1000 Hz center waterfall frequency. After any traffic is passed on the net, we may proceed by sending an MT63 1k long (1000 Hz, 64 bit long interleave) bulletin broadcast message, experiment with different modes or NBEMS alpha products. At approximately 11am ET we may switch to 7.073 USB, Olivia 8/500 for a retransmission of our weekly bulletin followed by propagation testing and a call for additional stations.

If you have comments or messages for the net, please format them in the FLMSG message form of your choice.

Thanks!

-Dave, KB3FXI

Dave.

For what it is worth, N3FLL and myself were both on frequency. I barely heard you, maybe 50%, but I did receive the CSV file from N9VT. I assume neither of you heard us. Band is not too good right now.

On a side note, since I have been home, I have heard of 2 new programs or modes, not sure which. One is PSK2K and EXP03, not sure what either of those are.

Subject: [paNBEMS] 7.073 USB today

Hello all,

First let me welcome aboard several new members to the list who have joined over the last week or so... we had a bit of a surge with new folks coming on board and we're now just one shy of 400 here on the paNBEMS yahoo group list.

20m is is pretty rough shape today so I'll be hanging on 7.073 MHz USB, 1000 Hz center waterfall with olivia 8/500.

I would like to do a test transmission of a FLMSG/CSV file, compressed. If anyone is available, please jump on and put out your call. I should be monitoring 7.073 through about 4:30 pm ET. At 4:30pm ET today (unless I get pulled out of the shack), I'm going to put a few calls out on 30m 10.135 USB, 1500 Hz center waterfal with olivia 8/500.

Please make sure you have the latest versions of FLDIGI (3.21.50) and FLMSG (1.1.23) from http://w1hkj.com/download.html

Hope to see you on the waterfall, if not today, tomorrow morning for our regular net sked:

paNBEMS weekly HF Net starts at 10:00 AM local time every Sunday morning with Net Control call on 3.5835 MHz USB using 8/500 Olivia, 1000 Hz center waterfall frequency. After any traffic is passed on the net, we may proceed by sending an MT63 1k long (1000 Hz, 64 bit long interleave) bulletin broadcast message, experiment with different modes or NBEMS alpha products. At approximately 11am ET we may switch to 7.073 USB, Olivia 8/500 for a retransmission of our weekly bulletin followed by propagation testing and a call for additional stations.

If you have comments or messages for the net, please format them in the FLMSG message form of your choice.

Thanks!

-Dave, KB3FXI

Gary,

Thanks for the report. I thought I heard someone else but didn't print.

Dave and I tried 60m but with no better results. EXP03 is an alpha release
to a
few testers. It has a number of higher-speed modes that Dave, W1HKJ, is
trying out.

Dave - if propagation is good we can try mixed voice-digital operations as
well - one of
the big advantages of the 60m channels.

73 to all,
Andy

Dave.

For what it is worth, N3FLL and myself were both on frequency. I barely heard you, maybe 50%, but I did receive the CSV file from N9VT. I assume neither of you heard us. Band is not too good right now.

On a side note, since I have been home, I have heard of 2 new programs or modes, not sure which. One is PSK2K and EXP03, not sure what either of those are.

Hello all,

I just uploaded a new paNBEMS instructional PowerPoint presentation on sending CSV spread sheet files with the latest FLMSG version.

If you have a chance, check out the presentation and if you can check in on the net in the morning, maybe bring along a small spreadsheet to send.

I'll be acting as NCS and will have a CSV to send to the net for all stations to receive.

I hope to see you on the waterfall tomorrow.

4756. Nets today (8/19/12)

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-19 17:14:51 UTC
From: David Kleber
Topic: 4756 Message: 4756

Hello all,

Thanks to all who checked in on the nets this morning on 80 and 40.

80m conditions were ok for the close stations to ncs (Pittsburgh) but pretty rough beyond about 100 miles. Thanks to w3tnu for doing a good job on relays.

40m was is really good shape and we had 16 check ins, 5 messages passed as well as a 2.5k CSV file, all transferred on MT63 1k long.

-Dave, KB3FXI

Here are the messages from the net in plain text:

   Below are a few reasons that the ITU Phonetic alphabet is used by proficient EMCOMM and NTS radiotelephone operators:
1. It is the INTERNATIONAL standard. Operators for whom English is not their primary language can clearly spell out a word that is difficult to copy. Use of standard ITU phonetics is crucial under conditions of weak or poor propagation or interference. I know personally, of an incident, where EMERGENCY traffic (reporting a traffic accident), originated by an operator with a heavy foreign accent operator (who was visiting in the U.S.), calling for assistance on 2 meters FM was bungled, because the responding ham did not understand ITU phonetics.
2.In handling RADIOGRAMS, or other traffic, a skilled operator that is familiar with ITU phonetics will automatically recognize that a phonetic is NOT part of the text of the message. If non-standard phonetics are used, it may confuse the receiving operator and delay the traffic.
3.It sounds â€professionalâ€ and is efficient.

##########
  In 1947 the International Civil Aviation Organization (ICAO), adopted rules and procedures that standardized phonetics. The reason? TO SAVE LIVES. There are documented incidents where aircraft (and lives) have been lost as a result of phone traffic being misunderstood or unreadable as a result of non-standard phonetics and thereby miss-communication between pilots (usually by those whose primary language was not English) and ground control stations.

  In 1956 the International Telecommunications Union (ITU) adopted the ICAO phonetic alphabet. Today it is THE worldwide standard for military, naval, civilian aeronautical and maritime, search and rescue groups, public safety, (law enforcement being an exception); and...the A.R.R.L.

##########

+ VOICE COMMUNICATIONS -- ITU PHONETICS, WHY? -- by D. W. Thorne, K6SOJ

  The use of ITU phonetics in both tactical and formal message (record) traffic handling is essential for accurate and efficient communications. (I use them on a daily basis just to

keep in practice.) It is my experience that some hams simply havenâ€™t ever researched â€œthe whyâ€. Others just havenâ€™t ever taken the time to learn them.

  From the earliest days of radiotelephone communications, several different â€œofficialâ€ phonetic alphabets have been used. During WW II the British used one version, while the U.S. had another. Others forces had yet even different phonetic alphabets.

##########
It is time to consider the drafting and development of an ARES QSO Party. I think the demand for such an operating event would be very high, given the rise in interest in public service, disaster response, emergency communications and indeed the ARES program itself since 9/11. An ARES QSO Party would promote on-the-air practice of skills of message handling and efficiency, and would go a long way towards networking of local, district and Section ARES groups across the country. To create this operating event would require ARRL Board of Directors' approval, but we in the ARES community can start the ball rolling by drafting a specific proposal for ultimate Board consideration. Ideas?

See you next month! 73, Rick Palm, K1CE,
Daytona Beach, Florida

##########

At an ARES meeting in Flagler County FL, Jim Billings, KB8LXC, a Katrina deployee had this to say:

We all talk the talk of emergency communications and many of us walk the walk as well. We had a special presentation from Ray Crepeau, K1HG, and Daisy Crepeau, KT4KW, about their experiences in Mississippi during the aftermath of Hurricane Katrina. They brought slides and a wealth of knowledge gained through first hand experience. Their photos were not the typical ones everyone saw on the news; instead, they imaged the working conditions faced by emergency response personnel and volunteers on the ground. Their message was clear: We must train together as a team on basic emergency management procedures related to communications. During the Katrina response, those without training were liabilities instead of assets, often passing erroneous and inaccurate messages.

Another lesson I took away from their presentation is that an emergency communication environment has no place for egos, so leave them at

home. Last but not least, if you are picked for
deployment, you have no idea of what conditions you
are going to walk into, so be ready for anything.

I will be in Armstong Ontario (2.5 hrs North of Thunder Bay) all this week and the next two weeks doing some teaching but will be home on the weekends..

I plan to set up in the truck and operate portable on digital mostly on 40 meters (7.073) and 80 meters (3583.5) after 2300z when I get back from my daily bike ride after classes and supper..

I will have the FT817 and the IC703 and vertical antenna on telescopic mast. Internet will be limited as is texting up there.

This also means I am not available to run the SATERN Monday night IRLP net Bob so someone else will need to fill the void.

Hope to catch a few of you on the air from Armstrong..

Fred

4758. high speed mode alpha testing results from tonight on 440 repeater

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-20 02:25:20 UTC
From: David Kleber
Topic: 4758 Message: 4758

Hello all,

We did a little testing tonight on the Pittsburgh 440 repeater with some interesting results on a few of the new high speed modes in a special FLDIGI alpha release.

PSK125RC4 (4 carrier psk125R at 440 wpm and 825 Hz wide) did very well to a local station on the repeater and to another station on an RF linked repeater (lots of audio processing through the links). PSK250RC3L (3 carrier psk250R at 660 wpm and 950 Hz wide) tested well to both stations, too.

We also tested the PSK125RC5 mode (5 carrier psk125R at 440 wpm and 825 Hz wide). The fellow on the other end of the linked system got 100% but the local fellow had problems. He said that the rx print seemed to be hesitating, as if the CPU was being taxed, but he said he has a pretty decently powered machine. A quick response back from an email to w1hkj suggested that it may have been because he was slightly off frequency or hot audio.

We were all quite impressed with the modes we tested. I'm especially impressed as I was acoustically coupling with a $10 speaker mic and an old beat up FT60 Yaesu HT into the repeater.

We're really looking forward to an official release of FLDIGI with some of these new modes, many of which are much faster than what we tested tonight. Some of the modes surpass our US 300 baud throughput limit and our bandwidth limits on HF, but quite a few will be permissible on HF in the US.

The really fast and wide modes should prove to be a real game-changer for VHF/UHF FM ops (both simplex and through repeaters) as we can now consider the possibility of sending larger binary files such as reasonably sized PDF's and pictures.

We'll keep everyone here up to date and will certainly make a major announcement if and when any new FLDIGI releases are made which include the new high speed modes.

Lastly, W1HKJ was awarded the 2012 "ARRL Special Technical Service Award" for his work on FLDIGI. He was presented the award at a hamfest in Huntsville Alabama yesterday!

Hello all,

If anyone is available for alpha testing of some new high speed modes today on 40m or this evening on 80m, please drop me a line at kb3fxi@...

I'll be monitoring 7.073 USB, 1000 Hz center waterfall, 8/500 Olivia through about 6pm ET. From 6pm to about 10pm ET I'll be monitoring, on or about, 3.5835 USB with 8/500 Olivia.

Please use RSID (TxID) when you put out your call.

Also, if there's anyone on the list in the Pittsburgh/SWPA area, I'd like to try to coordinate some high speed mode testing on 2m FM simplex.

Thanks.

4761. Call frequency listing changes

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-21 20:42:32 UTC
From: paNBEMS-owner@yahoogroups.com
Topic: 4761 Message: 4761

Hello all,

First, let me point out that our existing actual paNBEMS operating frequencies are not changing.

paNBEMS recommends listing all call frequencies with the transceiver dial frequency followed by the center waterfall frequency to avoid any ambiguity.

We had previously listed our 80m and 40m transceiver dial frequencies with a 1000 Hz center waterfall frequency. The was our standard convention because the old versions of FLDIGI had a fixed spot of 1000 Hz center waterfall when using MT63 1k long, one of our primary operating modes. This allowed for a transition between Olivia 500 Hz modes at 1000 Hz center waterfall to MT63 1k without the operator having to retune their transceiver VFO.

At the request of paNBEMS, W1HKJ made a change to the MT63 modem in FLDIGI to allow manual changes to the spot on the waterfall. Until now, we kept the traditional listings of dial freq and 1000 Hz waterfall center for our call spots on 40m and 80m.

We are now changing our operating frequency listings to reflect a center waterfall spot of 1500 Hz in anticipation of some new, high-speed modes, which require a higher center spot on the waterfall due to their slightly wider bandwidth requirements. Additionally, many transceiver narrow bandpass filters are centered at 1500 Hz and our change to 1500 Hz will ease the operations of those running bandpass filters.

Again, the effect operating frequencies are not changing. For example, 3.5835 USB, 1000 Hz center waterfall (our old listing) equates to the exact same operating frequency of 3.583 at 1500 Hz waterfall center.

We have changed the text on the paNBEMS Yahoo Group page to reflect the change in how we list our call spots.

Thanks.

4762. NBEMS Nets Waterfall Center Frequency Changed to 1500 Hz

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-21 21:04:51 UTC
From: Charles J. Hargrove
Topic: 4762 Message: 4762

I am in agreement with the standardization to have the waterfall spot changed to 1500 Hz. This is for several reasons besides what Dave mentions below. As with HFlink and MARS, the center of a 3 khz SSB channel is 1500 Hz. This is also what has been stated as the "center channel" for 60 meter data/cw operations. This is also the center frequency that we use for MT63-2K on VHF simplex and repeaters as it keeps the lower edge of the signal above 500 Hz so that it is not trapped and stripped off by CTCSS/PL filters.

Effective with the USeast-NBEMS net on August 22nd and the NY-NBEMS net on August 25th, we will have our nets on 7.036 Mhz dial frequency with a new waterfall spot of 1500 Hz.

---------- Original Message ----------

Hello all,

First, let me point out that our existing actual paNBEMS operating frequencies are not changing.

paNBEMS recommends listing all call frequencies with the transceiver dial frequency followed by the center waterfall frequency to avoid any ambiguity.

We had previously listed our 80m and 40m transceiver dial frequencies with a 1000 Hz center waterfall frequency. The was our standard convention because the old versions of FLDIGI had a fixed spot of 1000 Hz center waterfall when using MT63 1k long, one of our primary operating modes. This allowed for a transition between Olivia 500 Hz modes at 1000 Hz center waterfall to MT63 1k without the operator having to retune their transceiver VFO.

At the request of paNBEMS, W1HKJ made a change to the MT63 modem in FLDIGI to allow manual changes to the spot on the waterfall. Until now, we kept the traditional listings of dial freq and 1000 Hz waterfall center for our call spots on 40m and 80m.

We are now changing our operating frequency listings to reflect a center waterfall spot of 1500 Hz in anticipation of some new, high-speed modes, which require a higher center spot on the waterfall due to their slightly wider bandwidth requirements. Additionally, many transceiver narrow bandpass filters are centered at 1500 Hz and our change to 1500 Hz will ease the operations of those running bandpass filters.

Again, the effect operating frequencies are not changing. For example, 3.5835 USB, 1000 Hz center waterfall (our old listing) equates to the exact same operating frequency of 3.583 at 1500 Hz waterfall center.

We have changed the text on the paNBEMS Yahoo Group page to reflect the change in how we list our call spots.

Thanks.

From: David Kleber
Topic: 4762 Message: 4763

Thanks, Charles.

paNBEMS should have probably made this change some time ago, but better late than never.

If I read your response correctly, your spot on 40m will actually be moving up 500 Hz from the previous spot. I think that's good as it will provide a little more separation from what has become a common worldwide PSK spot at 7.035 USB.

Andy,

I didn't catch you on 40m today... now on 3.583 USB, 1500 Hz center waterfall, 8/500 Olivia.

I'll be out for dinner, probably between 7-8pm ET but will have it on and monitoring.

I hope to get a few takers tonight for some testing with 3.21.50EXP03.

For those interested in testing some of the new high speed modes, please drop me a line at kb3fxi at yahoo dot com and I'll help get you set up with the alpha vs of FLDIGI.

I am up in Armstrong Ontario 3 hours north of Thunder Bay. I was at the old Pinetree Line NORAD Radar Base last night playing on 40 and 80 with no luck, went to 20 meters PSK and made contacts to the WA. State with FT817 at 5 watts and vertical.Just got back from 20km bike ride, have shower and supper and head up there and try again for a bit tonight.awill take some pictures of what is left of teh old base as well..It is 1843 EST now..

Ok, Fred.

What kind of antenna are you running with the qrp setup there? Can you make it down on 80m?

Hi Dave,

I just called CQ using those settings but don't have the alpha yet. Will send you an email. I guess my 40m doublet works fine for 80m, good to know. Had a QSO with KC8YJJ from Ohio. Kept the radio on that frequency and will check in every now and then.

Hi,

there appears to be a scheduled net at 3.585 + 1000:

MIDTN MIDTN
QNN K8RDN LANSING MI
PRE-NET QNI

Presumably this starts at 8PM EST.

Sander,

You need to go to:
http://www.w1hkj.com/alpha/fldigi/v3.21/

Download the alpha vs for whatever OS you're running.

I'm most interested in testing the following from FLDIGI 3.21.50EXP03:

Thor64, 114 wpm, 1200 Hz wide
Thor88, 312 wpm, 1600 Hz wide
5xPSK63R, 275 wpm, 416 Hz wide
3xPSK125R, 330 wpm, 475 Hz wide
2xPSK250RL, 440 wpm, 600 Hz wide

Hope to see you on the air. I'll be on 80m for a while tonight.

-Dave, KB3FXI

Fldigi Alpha just hung on me after decoding for a while. Does Dave want to hear about these issues or should we just ignore it? I was copying KB3FXI partially but others came in better. I'd tell you the callsign but fldigi is taking a nap and the screen is blank.

4775. Tue 8/21/12 - 40m testing with 3.21.50EXP03 alpha

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-22 03:06:02 UTC
From: John L. Rogers
Topic: 4759 Message: 4775

Dave and all,

Read the mail as you tested this evening. Good signals even with QRN. Copy for the THOR message texts 100%. Copy on everyone with experimental modes 80% to 95%. QRN and some fading seemed to be the problem.

Dave,

I seem to have a problem with my transceiver. Your gear did very well to hear me. On checking the output read 0.5 watt when I distinctly remember telling the processor to put out 25 watts. Cycled the power and all is back to normal. It was easier when rigs were strictly analog!

John, W3IW

4776. High speed alpha mode test report - 08/21/12

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-22 04:38:14 UTC
From: KB3FXI
Topic: 4776 Message: 4776

Hello all,

Special thanks to kc8yjj, ab3ls, w1sop, ko3i, w8aii, w3iw and k3hps for pitching in on the FLDIGI 3.21.50EXP03 high speed mode alpha test tonight.

The report I just submitted to the alpha team is below.

-Dave, KB3FXI
paNBEMS

Hello all,

We had a fun evening of testing with about 6 stations on 80m under fairly heavy static crash conditions.

Things started out pretty dismal with about 3 stations, relatively close to mine. Tests on 5xPSK63R, 3xPSK125R and 2xPSK250R were all pretty poor with the best signals at my station coming in between 70-90% print and the worst between 0-50%. We switched to Thor64 with some fairly close stations checked in at that time and did a little better.

A little while into the test (around 10pm ET or so) a few more distant stations came in quite a bit stronger. We had several successful reports on 100% copy of an FLMSG file just over 1k in size. We then went to 4xPSK63R and had pretty good results, but not as good as Thor64. We also had some success with a few stations reporting 100% on the same 1k file with Thor88.

One interesting observation... there was a station in OH who confirmed a glitch that I reported on the air during the testing. I was getting false hits for bpsk31 on his Thor64 RSID. Maybe the code is too close to the bpsk31 RSID code???

I have the raw text of the entire test session for anyone who cares to check it out... you'll have to scroll through the diddle.
Go to: http://groups.yahoo.com/group/paNBEMS/files/Net%20Text/ it should be the first file at the top of the list (!08_21_12_HF_alpha_test.txt).

Lastly, some bug reports... I ran into an issue toward the end of the evening where the rx screen on FLDIGI stopped scrolling. I had to keep rolling the mouse wheel to see each next line after the word wrap. After a while, for no apparent reason, it started scrolling properly again. And we have had several stations reporting issues on 3.21.50 (EXP03 and standard release) of the program hanging up at the start of a transmission and not sending the text in the TX box. You have to hit the esc key or rx button then start again. I've only had it happen to me a few times but other stations are reporting it as a regular issue.

We're looking forward to the chance to take advantage of some testing under more quiet conditions on HF. I'm sure we'll do much better with some of the multi channel PSK modes.

-Dave, KB3FXI

4779. Create Custom Forms in FLMSG

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-23 02:10:11 UTC
From: joe_aa3jc
Topic: 4779 Message: 4779

Is it possible to create my own custom forms to support our local EOC and have them part of the "Form" drop down in FLMSG? If so where do I find the instructions on how to create these forms and add them to the Form Menu drop down in FLMSG? I searched here in this group, along with www.w1hkj.com/ <http://www.w1hkj.com/> and was unable to find anything about this. I did not want to use the Template function as I believe it sends the form and txt data making it a larger file size then just the text data if I understand the Template format correctly.

4780. 80M testing with KB3FXI and FLDIGI 3.21.50EXP03

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-23 02:42:22 UTC
From: w4mrw
Topic: 4780 Message: 4780

Dave and I did some experimenting with FLDIGI 3.21.50EXP03 on 80M this evening (3578.5 MHz, the VDN and ODEN/D frequency).

Here is a copy of what I received at my station in Northern VA. We had 100% success when sending FLMSG with THOR88, I took one static hit with THOR64

4xPSK63R took a lot of hits.

From: David Kleber
Topic: 4780 Message: 4781

Thanks for posting your report and print, Mark.

That was a good test and I'm still waiting to hit a station under clean conditions to see what some of the even faster modes will do.

As with any particular mode, there's always trade offs between speed, accuracy and bandwidth. Each mode has it's place. Our goal will be to narrow down to 2 or 3 of the best high speed modes for passing larger messages and files and add them to the recommended toolbox in addition to Olivia and MT63.

Thanks again for the test sked. I'm looking forward to doing it again.

-Dave, KB3FXI

Subject: [paNBEMS] 80M testing with KB3FXI and FLDIGI 3.21.50EXP03

Dave and I did some experimenting with FLDIGI 3.21.50EXP03 on 80M this evening (3578.5 MHz, the VDN and ODEN/D frequency).

Here is a copy of what I received at my station in Northern VA. We had 100% success when sending FLMSG with THOR88, I took one static hit with THOR64

4xPSK63R took a lot of hits.

4782. QRZ dot com - Hurricane Watch Net to listen as Isaac approaches

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-23 18:21:20 UTC
From: David Kleber
Topic: 4782 Message: 4782

Hello all,

I just posted a response to this discussion on qrz.com regarding the possible use of a 40m LSB phone freq for the Hurricane Watch Net at night and also suggested the use of NBEMS for reporting hurricane weather observations from an affected area.

NBEMS / FLMSG now has a hurricane weather observation reporting form.

Feel free to check out the discussion on qrz.com and add a comment if you wish.

-Dave, KB3FXI
paNBEMS

Also, here's a great pointer I picked up in an FLMSG message during some NBEMS HF testing the other day:

TITLE:
TO: Virginia Digital Net
FROM: W4MRW
SUBJ: Storm Pulse
DATE: 2012-08-22
TIME: 1915L
MESSAGE:
For those interested in following Tropical Storm ISAAC the Hurricane Watch Net has access to Storm Pulse which is typically a service you would have to pay for or in our case we have access to it through the Fairfax County WebEOC.

http://www.hwn.org/tools/imagery/atlantic_stormpulse.html

Propagation on 14.324 USB is excellent between Honduras and CT. Mark is coming in loud and clear. Well, it's an s6-s7 but excellent SNR, easy to understand. Of course I'm only listening as CT is not yet affected.

4784. Re: [paNBEMS] Create Custom Forms in FLMSG

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-24 16:28:51 UTC
From: David Kleber
Topic: 4779 Message: 4784

Joe,

Short of working with the open source code and doing C++ programming to build your own version of FLMSG, there's no other way to add forms with HTML output on FLMSG.

One option is to just use the "Template" feature of FLMSG to build your own kind of form, but that won't give you an authentic HTML view output like the FLMSG embedded forms produce.

As we speak (type), new FLDIGI and FLMSG alphas are out and the FLMSG alpha now includes the ability to import XML files. You should be able to build your own forms with an XML editor and send with these new FLDIGI/FLMSG versions. XML will add a lot more overhead as compared to the very minimalist code that the FLMSG forms add, but we now have a whole new set of high speed modes in the FLDIGI alpha that are proving to be good performers on moderate to good HF conditions as well as VHF/UHF. I would hope that the Alpha's will be tested extensively over the next few weeks and that we get a new major release soon. But it all depends on the level and success of the alpha testing.

Subject: [paNBEMS] Create Custom Forms in FLMSG

Is it possible to create my own custom forms to support our local EOC and have them part of the "Form" drop down in FLMSG? If so where do I find the instructions on how to create these forms and add them to the Form Menu drop down in FLMSG? I searched here in this group, along with www.w1hkj.com/ and was unable to find anything about this. I did not want to use the Template function as I believe it sends the form and txt data making it a larger file size then just the text data if I understand the Template format correctly.

4785. Re: Create Custom Forms in FLMSG

From: elancki
Topic: 4779 Message: 4785

Hello Joe,
Another option is to use a spreadsheet to make up forms. After they are filled in, you can save it as a CSV, and use FLMsg to transmit the CSV file. The receiving station can view and print the form as a CSV table in their web browser, or open the CSV file with another spreadsheet app.

73,
Ed

4786. Out of town this week, Armstrong Ontario

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-26 02:16:41 UTC
From: Fred VE3FAL
Topic: 4786 Message: 4786

I will be heading back to Armstrong tomorrow just after supper for another week.

I took lots of pictures of what is left of the old PineTree Radar Base with some misc. gear hanging around and lots of military cable hanging in one of the buildings at the top of the hill where the radar units were.

Pictures of the old base and trailer park. I want to post on my webpage later and hope that some folks can identify some of the place.

Anyway, I made a special bracket for my Reese hitch tonight to put my 33 foot telescopic pole on, I can put a wire on it for 40 meters no problem and can run a inverted L for 80 meters.

I hope to operate on 40 in the evenings after my bike ride, I teach this week till 3:15pm then the evenings are mine..

I will hang out on 7.073 and 3583.5 using my netbook and FT817 at 5w...

I will also be on 3.568 checking into the Minnesota Section Net at 1930 local time...on cw

Listen up for me, I was able to work 20 meters from the same site last week into WA. State with a 599 report..

Fred

Hi Dave,

Thanks for the test on PSK63 and Thor 88. That was fun and they are really fast modes. Sorry for the mix up when I was sending my message. I must have pressed autosend a couple of times and the same message repeated several times. I pressed abort and it stopped sending. Then I was going to send you a message explaining what happened and when I pressed Tx it started to send the Flmsg again which leads to my question. I searched every where to find a clear transmit buffer and I couldn't find any. There is an abort key and a clear key which clears the text in the transmit window but is there a clear buffer. Maybe there isn't a way to clear the queued text from Flmsg to Fldigi when you hit the autosend.

In preparation for Isaac, I am testing HF NBEMS capability at the American Red Cross station (KE5QJQ) here in Baton Rouge. I will be on 7073 USB with Olivia from 2330 to 0030 calling CQ. Any contacts would be appreciated.

Dana,

is that 2330z or 2330 CST? Regardless I'll fire up the radio and see if
I hear you. If you used local time it'll be too late here in EST.

Dana,

Hearing you 529, -7 to -10 S/N in Fredericksburg, VA (FM18GF) over a 947 mi. path with moderate QRN. Just a shadow on the waterfall and about 70% copy. At 16/500 I'd probably have you 100%.

Good luck and stay safe.

I heard some of Dana's transmission but all of Gary KC8YJJ who is currently trying to connect. For some reason fldigi was not opening the squelch even though the signal looked very clean. I have squelch disabled right now and seeing Gary's reply. Did not see the message Dana sent. Apparently Dana's signal is flying overhead and landing in Toronto but not CT.

I did call out one time, I think Dana received that as I got a very faint reply back with something that looked like my call. Lots of QRM here and some faint phone traffic as well.

I hope no one gets hurt due to the weather.

Thanks to KC5GOI, W1SOP, KC8YJJ, WD8PVB andNV9T for signal reports and QSOs. This didigtal station was set up recently and your reports are invaluable for adjustments.

Am seeing some problems with the slow computer attached to radio, but looks like it will do.

Current projections put Isaac here late Tuesday. It looks like Katrina/Gustav path.

Dana,

thanks for the report. My antenna is a 40m doublet fed with balanced line into a balun into my internal tuner. I'm surprised it works at all on 80m and that you got reasonable copy on my message. I used 50W and the sound level is adjusted so there is no ALC.

I'll leave my rig running for a while and check back every now and then.

Just a note to let you know the SATERN So. Terr. Digi Net will be in monitor mode on 14.065 and will probably be activated to full emergency status tomorrow sometime.

Condx are not real good and we have adopted fallback freq of 7.065 USB and 3.565 USB just to be safe.

Contact with your station or any paNBEMS station is welcome.

That's pretty impressive Dave. I've been listening on 20m and
propagation to CT is pretty spotty. Sometimes they float it with s7
signal, sometimes it's silent like now. I will switch over the NBEMS now.

Dave,

95% printing on Net Control AD5XJ. 100% print of first two bulletins.
Sever fading but amazing copy of the Olivia 8/500.

No copy with this antenna of your ground wave signal or of the station in
Herndon, VA.

Good copy of the other two stations transmitting.

I am hearing the 14.325 Hurricane Watch Net stations in Mississippi and
Louisiana at S5.

I wasn't at the radio but when I just checked I saw about 80% copy on
the QSOs. I think the last few messages said there would be a transfer
to 80m so I tuned to that band.

Hello all,

I've had fairly decent comms with Ken, AD5XJ, in Houma LA so far this afternoon on 14.065 USB.

In anticipation of changing 20m conditions, Ken would like a com check on 7.065 USB, 1000 Hz center waterfall, Olivia 8/500 at 16:50 CDT / 17:50 EDT / 2150z.

14.065 USB, 1000 Hz waterfall, 8/500 Olivia will remain as primary frequency until AD5XJ advises otherwise.

Hi,

I'm monitoring and occasionally transmitting on 14.065 + 1000 USB. David WB0KGN came roaring in from MN and copied a message of his to Fred VE3FAL. I had not received Fred's original message. As I recall he's operating QRP.

Will switch to 7.065 at 2150z.

Technical geekery: my watch get time corrections every night via radio. The primary time is set as a time zone/city and you can set a secondary zone as well. I now run that at UTC. In fact at the moment UTC is displayed on my watch which a small display of local time (EDT) below it.

Further geekery: I set up a second skype account to listen to my radio as I work. I also use join.me to watch and control fldigi remotely. Logmein is probably better for that though.

Yes I am portable and have buddipole set up in Motel room running QRP, copied W4MRW very well earlier when he was conversing with AD5XJ.

Not sure how antenna will work on 40 meter in the room later..

I may head up the road to the radar base and set up my 33'telescopic pole on my homebrew reese mount on the truck and give 40 a whirl..

Charles,

I use VNC between computers on my home LAN but in this case my work laptop is on VPN and can't 'see' my other home systems like my printer and NAS box. In a short while the work day is done and I'll switch to using VNC.

Yes I am portable and have buddipole set up in Motel room running QRP,
copied W4MRW very well earlier when he was conversing with AD5XJ
Not sure how antenna will work on 40 meter in the room later .

I may head up the road to the radar base and set up my 33□telescopic pole on
my homebrew reese mount on the truck and give 40 a whirl..

Hi,

I'm monitoring and occasionally transmitting on 14.065 + 1000 USB. David
WB0KGN came roaring in from MN and copied a message of his to Fred VE3FAL. I
had not received Fred's original message. As I recall he's operating QRP.

Will switch to 7.065 at 2150z.

Technical geekery: my watch get time corrections every night via radio. The
primary time is set as a time zone/city and you can set a secondary zone as
well. I now run that at UTC. In fact at the moment UTC is displayed on my
watch which a small display of local time (EDT) below it.

Further geekery: I set up a second skype account to listen to my radio as I
work. I also use join.me to watch and control fldigi remotely. Logmein is
probably better for that though.

I also have a dyndns.org account that points back to the Monowall firewall
at home that has NAT statements for each PC on the LAN.

I was glad to see your strong signal David.

I just switched to 7.065 but have been volunteered to grill chicken on the BBQ for dinner. Will report back when I can on received signals. I have disabled SQL for now as that seems that have caused me to receive some transmissions in the past. Pure speculation at this point but worth a try.

I used fldigi to switch to 7.065 but really only the GUI changed and the radio stayed where it was. As a result I was not on 40m, sorry. I've been monitoring since about 2300z but nothing decoded yet. Sent a real brief CQ a while back.

Sander,

Here is the test sent by Ken, AD5XJ.

AD5XJ SATERN Southern Territory Net Mgr. returning

Be advised the QRN from lightning in the storms approaching has increased to very high
levels. I am not sure if I will be
able to continue on the air for very much longer. I would request that anyone that
stays and monitors the freq email me
with what happens, or questions to my Internet mailbox ad5xj@...

When this band of thunderstorms passes and I can again resume duties, I will gladly
relieve who ever needs a break.

Again, I am still available,

John, W3IW

Thanks John, Andy and Dave for the comms report. It was a bit frivolous to transmit but I figure we need to forge the iron while it's hot and check conditions right before they may be needed in earnest.

My grid is FN31FG (close to Norwalk, CT). I'm using 50W into a 40m doublet fed with balanced line into a 4:1 balun before heading into the built in tuner of my TS-2000. I adjust the audio drive so that the ALC doesn't kick in.

Sander,

Not frivolous at all - with local sunset here on the East Coast band condx. are changing & we need to re-prove the channel.

I'm in FM18GF running about 65W into a 110' center-fed Zepp at 30' oriented NNE/SSW (coincidentally good for New England and Gulf States coverage).

Andy,

great, I am glad I didn't break protocol too badly. Still new to NBEMS and emcomm.

My doublet is just about East-West so I'm glad it's working at all towards the South. Thinking about this some more my next antenna should be optimized for Southern reception as that's where the weather will come from most likely. Anyway, that's for later.

Thinking about this a bit more I see we're just outside of NVIS range so (300 mi) so I'm curious how the waves made it so well between our stations. High take of angles on both sides I think. My antenna is about 15 ft high. The next will go higher in the trees.

Sander,

I'm not sure there's a clear protocol for guarding a frequency during NBEMS ops. In Navy MARS we do regular comms check during extended operations to confirm propagation so I consider it good practice.

As far as our path - I still have some high angle (> 55 deg.) components in my radiation pattern so we should be able to maintain comms as long as the critical frequency stays high enough.

4846. Isaac ops info

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-29 01:24:51 UTC
From: n9vt_andy
Topic: 4846 Message: 4846

Some (hopefully) useful information:

1. The Hurricane Watch Net is operational on 14.325 with a secondary frequency of 7.268. They are streaming net audio via receive sites in NY and MN with good signal strength. See http://www.hwn.org for links to the audio. The net is currently taking wind/barometric pressure reports from the impact area.

2. The ARRL National Traffic System is standing by for Health & Welfare (H&W) traffic from the affected area. Any station originating H&W traffic is requested to use the standard ARRL radiogram format (fully supported by flmsg) and the abbreviated ARL H&W texts where possible (http://www.arrl.org/files/file/Public%20Service/fsd3.pdf).

- I am an NTS-Digital (NTS-D) Digital Relay Station (DRS) and I can file any traffic into the system that stations can't find other outlets for.

- Inbound H&W messages destined for the affected area will not be accepted until 72 hours from now to keep channels free for outbound traffic.

3. The ionospheric sounder at Eglin AFB is a great source of propagation information for the Gulf Coast area. At a glance you can see the MUF, Critical Frequency (FoF2) and other useful information for assessing path conditions. See http://car.uml.edu/common/DIDBMonthListForYearAndStation?ursiCode=EG931&year=2012 and click through the appropriate month/day/hour links to see the latest ionogram (updated at 15-minuted intervals.

- It looks like the critical frequency is still above 7.5 MHz which probably explains why our NVIS paths are still so good.

Charles,

I'm set up to monitor the same frequencies with NBEMS. I will do what I can for traffic going to CT although I have not done that before. I know local hams who can help out as needed once I receive the traffic so no worries. It will get delivered.

On the SATERN net IM came up. I can be pinged on skype as 'qadude' and have other IM clients as well. I think they're a useful tool while the internet is still up. Feel free to send me an offlist message with IM contact info.

Dave - KB3FXI

I am also monitoring 14.325 - the Hurricane Watch Net. Using second rig, my old Drake C Line. New gear is on digital duty.

Net control right now is Judi, N6LSO. N6LSO is very strong, S9+, and most of the Gulf Coast stations are running S8 here. Mostly measured weather reports.

By the way, all 7.0650 Olivia stations are running S7 to S9+ this evening so far. President of the New Orleans Amateur Club has lost power but is still on. Apparently things are getting interesting.

From: Sander Pool
Topic: 4854 Message: 4854

Hi,

Dave KB3FXI's signal was 18dB or so a few hours ago, now -2 dB. Reach into the South may be limited. Actually we haven't heard any Southern stations all evening I think.

From: VE3FAL
Topic: 4860 Message: 4860

Put a note on the door to tell housekeeping they are not needed today. Have buddipole and rig and computer set up and monitoring 20 meters today while I am training.

Will be back around noon and will check to see who I am copying.

Seen quite a few stations on 40 meters last night..

Good luck Ken, stay safe.

Fred

I am on-air as of 1145Z monitoring 7065. I plan to transition to 14065 later this AM after the MUF increases (still around 8 Mhz for the 945 km path between NoLA and me).

I will be operational on Echolink (N9VT, currently unconnected) and on the following IM systems by 1215Z:

Yahoo!: n9vt_andy
GoogleTalk: NNN0PBF (my MARS callsign)
Skype: NNN0PBF

Also monitoring the Hurricane Watch Net via streaming audio.

Mark/W4MRW - are you monitoring the VoIPWX net on Echolink?

73,
Andy

4863. news from Houma

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-29 15:34:33 UTC
From: n9vt_andy
Topic: 4863 Message: 4863

W5EW checked into HWN from Houma (approx 2.5 mi. from AD5XJ) at about 1440Z - reported 10mph winds and power on in the city (out in the suburbs) with main roads open - no info on damage

Saw your exchange w/Gary. We were planning to move around 1200 if the MUF kept climbing - we have W3IW and him monitoring both frequencies. Mark/MRW continues to monitor D-STAR and the VoIP WX net.

4864. occasional non-decode from fldigi

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-29 15:38:36 UTC
From: Sander Pool
Topic: 4864 Message: 4864

Hi,

just a couple of minutes ago there was an exchange that was completely non-decodable even though the signal was very strong right after the RSID:

<<2012-08-29T15:32Z Olivia @ 7065000+1001>>

It seems KB3FXI was able to decode OK. I've seen this quite a few times recently, seemingly after installing the EXP03 version we used for high speed testing.

Luckily I was recording audio so I can try to decode it again. Anyone else?

Sander W1SOP

I have family there, from what we've heard, it's not bad aside from the inconvenience of power being out.

I'm watching the Weather Channel and people around New Orleans are reporting it's worse than Katrina. The surge is apparently very bad. Because the storm is moving so slowly the amount of rain that falls is also very high. Looks like the new barriers for New Orleans are holding which is great news.

4869. 20 meter condx

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-29 16:08:41 UTC
From: n9vt_andy
Topic: 4869 Message: 4869

Conditions on 20m appear poor - heard a very weak station of 14.065 but no decode.

30m (10.135) might work better for the path to NoLA - shoud we consider trying it?

4870. Re: [paNBEMS] 20 meter condx

Hi,

how would people know to use that frequency? If they can read this email
there's no need for NBEMS :-)

When Ken comes back online, which frequency will he use to call for
help? What about those around him who may be in the same situation?

Sander W1SOP

4871. SATERN So. Terr. Ops - 20 meter condx

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-29 16:25:05 UTC
From: David Kleber
Topic: 4869 Message: 4871

Andy,

I think we should just stick it out on 20m and work relays.

Yesterday, before he shut down, Ken (AD5XJ in Houma LA), asked me to put out some calls for the SATERN Southern Territory net, of which he is the manager. I never expected us to be running the nets. Their set frequency is 14.065 USB, 1000 Hz center, 8/500 Olivia. They don't list 30m as a backup... only 7.065 USB.

Houma LA is currently in the eye of the hurricane. As the storm moves slowly, they're going to get hit with the right side of the eyewall. I hope he makes it through okay. Isaac has shaped up into one nasty storm.

Sander,

I am not suggesting we move our opreations wholesale to 30m, just that we "...consider trying it." Keeping abreast of HF propagation shifts is critical for ECOM operations. The bands will not wait on us when they decide to change...

This is also why we have stations monitoring the other primary frequencies and are coodinating our ops via email & IM. The guard stations on 40 and 20 can direct affected area stations to that frequency if conditions are better or relay for them if they can operate on 30.

Dave,

Wilco. WB0KGN is copying both YJJ and me. I cannot copy YJJ. Current plan is for YJJ to lead off with calls every 15 min., followed by KGN and then me.

W4MRW is copying all three of us and should be able to relay if necessary. How he's copying me I'm not sure - we're only ~50 mi. apart over varying terrain.

Sander,

No problem. Email/text/digimodes/etc. are imperfect modes of communication. We forget how important context is even when sending facts/figures.

Perhaps later we can try 30m after we have some relief stations on the other frequencies. Current conditions suggest 30m is nearly ideal for ~1000 mi. paths into the Gulf Coast area.

I will be monitoring 14.065 until 20z (4pm ET), and I will be back
from work after 01z (9pm ET) if I can help in any way.

I am hearing WB0KGN ok, and KC8YJJ is weak but readable with the
squelch off, here from South Central PA.

The Hurricane Watch Net's two Internet audio streams are not accessible from my QTH as of 1715Z.

Request one or more stations monitor via RF and relay any signficant reports.

Thanks,
Andy

4883. still monitoring 20m, no Southern traffic

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-29 18:07:06 UTC
From: Sander Pool
Topic: 4883 Message: 4883

Hi,

I'm leaving the channel clear but I'm monitoring 20m while listening to the audio using skype. This way I can leave my join.me session hidden until something pops up.

I noticed some odd chirping noises at about + 1700 but they don't seem to interfere with Olivia on 979. Getting decent copy from WB0KGN but the lack of traffic from the South is concerning. It is hard to believe no one there has backup power. I suspect they're all on phone and that NBEMS is not commonly used for emcomm. It could also be that prop to LA is so poor we're not hearing anything but I find that hard to believe. We would have heard an occasional blurb on one of our radios.

Let's hope all is well and let's keep notes for an AAD (After Action Discussion) with Ken and other interested parties after the situation has been restored to normal.

Thanks to the stations doing the relay calls.

73,

Sander W1SOP

Point Au Chene and Laplace report heavy flooding and evacuations underway. I-10 is closed and flooded in Laplace area.

Lake Maurepas is overtopping several levees - it's apparently beyond capacity. Areas that did not see flooding during Katrina are reporting heavy flooding at this time.

Sander,

From media reports it looks like the cell network and internet are substantially intact. I'm seeing live wx postings from within parishes south of NoLA.

I'm sure we'll hear some traffic after the weather has passed and the H&W reports start to flow. Everybody's sheltering now and I'm betting the winds have brought down more than a few antennas.

BTW those chirping noises were Pactor - probably a Winlink RMS.

Andy,

it would be great if the infrastructure is mostly unaffected. With 500K people without power I have to assume comms infrastructure will got down soon. Hopefully phone lines are mostly buried and their equipment did not drown. Batteries will keep that going for a while.

You are right of course that during the storm is not the time to expect traffic.

Thanks for the bit about Pactor. Good to be able to recognize such signals.

At the moment I see K7CWA and WB0KGN. CWA is barely copied here. KGN is around 8dB.

Some areas will be suffering up to 30 hours of sustained tropical storm force conditions coupled with torrential rain.

We'll see how the commercial telecom systems hold up.

...and with the massive flooding that's already started there will be thousands in shelters with overloaded or no landline/cell comms. They will all be trying to contact their families & friends over the coming 96 hours. If NTS, SATERN, Red Cross do their jobs we'll have enough health & welfare traffic to keep us all very busy.

Interesting...I just heard on TV that they can't go out and start
fixing the power lines until the winds drop below 30 mph...they can't
use the bucket trucks in higher than 30 mph winds.

I wonder how long the backup power for communications systems will
last...look like the winds won't be down until Thursday.

Hi,

I downrevved to .50 as that's what I had on hand and no link for the 07 version. It seemed to work better for a while but then just now I again had a whole block of seemingly good waterfall roll by without any characters being decoded. Other times the waterfall seems empty and fldigi is able to pick up shreds of a transmission from the soup.

Odd.

Sander,

Are you running Windows? I'm wondering if it's caused by the OS not providing the necessary cycles to fldigi because it has some higher priority process running. Do Linux users see this kind of behavior?

I stripped XP down to just the essentials and that has made a huge difference for fldigi and other soundcard software. Amazing the junk that MS has running by default.

Andy,

yes, I'm running Windows on a fairly speedy and modern laptop. The FL in fldigi stands for Fast Light so it should have no trouble operating on this hardware. I have no real illusions of this being fixable, just wanted to hear if others experience the same.

Hi,

it seems that it would be handy to have an internet based 'backchannel' when running a net like we currently have looking for SATERN and related traffic. A chat room where folks that are unaffected by the emergency can post notes and status without using radio bandwidth. Clearly I see the benefit of using radio even when the internet is available as this allows us to practice but you also run the risk of drowning out a signal that's trying to get through.

Right now I see WB0KGN leading the charge. If we had a chatroom of some sort he'd know who is still monitoring without us having to send traffic. Actually he's the only one I read reliably now but I saw a few shreds from Fred VE3FAL come by.

I realize email to this yahoo group works pretty well and individuals can decide to use IM to stay in touch but maybe something like IRC would be more appropriate? This could be used by NCS to ask for a relay by a remote station for example or to report signal strengths without using RF.

In my view, under these conditions (real people in real trouble) we should use the radio as little as possible to exchange pleasantries. Use it to send calls asking for traffic and the occasional propagation test. Keep chatter to a minimum so that faint signals have a chance to get through. Use internet for backchannel comms and coordination.

Thoughts? Crazy idea? Something to explore after Isaac is done maybe?

The chat function of an EchoLink conference can be used for both text & voice.

Sander,

Concur. In a real emergency our job is to use whatever means are available to move information that affects safety of life/property. In most incidents (like Isaac) radio is critical for comms into/out of the affected area. Those of us working outside the area should protect the limited bandwidth on HF by using other means for admin & coordination.

Such coordination is very useful when propagation doesn't cooperate or a net involves many stations over a wide area running on multiple frequencies. It would have been very useful this afternoon - posting traffic on this group helped out a lot.

W4MRW and I are operational on Skype and can use other IM platforms as well. I just connected with you as well. Echolink's audio conference capability is very useful and operates like a conference call; Skype can run conferences as well.

My Skype ID is NNN0PBF (my MARS callsign); I'm also on Yahoo! IM at n9vt_andy and Google Talk at NNN0PBF.

Had to take the buddipole down in the motel room and pack stuff up..I almost forgot I am out of here tomorrow at 3:15 after training is done and I need to be out of the room by 11:00am...so packed up the antenna and rig and put them in the truck..
Was fun listening, when Dave swung his beam around he was 599 and was able to copy my 4 watt signal, Sandor also noted seeing pieces of me..
Will monito through email for now...

Great exercise all in all......

I could not read you Andy but know you were chatting with David WB0KGN
based on his message. I could hear your tones but not enough for fldigi.
It seems 20m isn't open right now. Signals are considerably weaker now
than before.

David: I can send a relay if you like.

This is my first post on Yahoo so I hope this is being done correctly! Some of the people in our Venango County RACES group have had problems with fldigi and Windows, and I want to share some of our solutions. These may not be elegant and it may be luck but it worked for us:

First, in XP Pro on a laptop I had to open the properties of the icons that started fldigi, flarq, etc. and set them for Windows 95 compatability mode and turn off advanced text handling in the check box. Also moved it all to the Administrator account. It has run FB ever since on all upgrades to date (rev 49 for me)but we had to take all these actions.

Next, in Windows 7 we had to always run with administrative privileges and it really stopped having problems when we just loaded it under the administrator account.

Hope this helps. If there is a simpler way, please let me know!

Hope it helps. I think I saw someone say their software froze in the middle of a send today on the net (Dave, maybe?). That was the main problem these actions of ours fixed: it would run right along looking good and then it just stopped dead. FLARQ and FLMSG would crash almost immediately, too.

Sander, will these answers done by hitting "reply" just go to one person, or are they posted for all as I am trying to do? (I'm trying to get the hang of this Yahoo group...)

tnx and regards, Bill WM3G

All,

I have to go into work this morning and cannot make our 1130Z scheduled start time. I will be monitoring the newsgroup and reachable by Skype (userid NNN0PBF).

Could someone organize groups to guard both 7065 and 14065? WB0KGN has a good setup on 20m - just need someone who can liaison between the 20m and 40m frequencies.

Gary/KB8HTU - could you do the initial callup and perhaps have Sander, W1SOP, do the alternate/relay calls?

I haven't heard from Dave/KB3FXI about today's plans - hopefully he'll post an update or come up on frequency.

BTW - I monitored 7065 all night - no activity in fldigi this AM when I checked.

All,

I have to go into work this morning and cannot make our 1130Z scheduled start time. I will be monitoring the newsgroup and reachable by Skype (userid NNN0PBF).

Could someone organize groups to guard both 7065 and 14065? WB0KGN has a good setup on 20m - just need someone who can liaison between the 20m and 40m frequencies.

Gary/KB8HTU - could you do the initial callup and perhaps have Sander, W1SOP, do the alternate/relay calls?

I haven't heard from Dave/KB3FXI about today's plans - hopefully he'll post an update or come up on frequency.

BTW - I monitored 7065 all night - no activity in fldigi this AM when I checked.

73,
Andy

☐

Gary you have had some nice signals into Armstrong…

Nice to see the effort put forward by all who monitored, stood watch and relayed..

Nice to give FLDIGI and NBEMS a workout.

Head home today for the long weekend, on the road just after 3pm today..

Fred

4928. SATERN Nets

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-30 11:53:56 UTC
From: John L. Rogers
Topic: 3911 Message: 4928

SATERN activity monitored yesterday - Wednesday, August 29, 2012.:

14265 Net active - daytime, conditions good. Regular schedule - 1500 Z Mon-Fri

7265 Net active - afternoon, conditions good.

3963 SATERN Net, conditions noisy with QRM (23:00 Z time frame)

3950 SATERN Net, conditions noisy with QRM, most stations in Louisiana and Mississippi, 00:00 Z and later.

During the time that this station was monitoring Weather Service bulletins were passed.

John,

Thanks for monitoring those nets. We should probably liaise with the voice SATERN nets to at least some extent and let them know what's going on with the digital nets.

Hi Sander, There was a program for net managers that SATERN used in the past, for the voice nets. I am not sure if they still use it. It took me a while to find it again on the net, but it is called Netlogger.
http://www.omiss.net/Facelift/netloggerFAQ.php

It does have a chat feature along with net management. This may be a solution to what you ask.

Subject: [paNBEMS] Radio nets in the 21st century

Hi,

it seems that it would be handy to have an internet based 'backchannel' when running a net like we currently have looking for SATERN and related traffic. A chat room where folks that are unaffected by the emergency can post notes and status without using radio bandwidth. Clearly I see the benefit of using radio even when the internet is available as this allows us to practice but you also run the risk of drowning out a signal that's trying to get through.

Right now I see WB0KGN leading the charge. If we had a chatroom of some sort he'd know who is still monitoring without us having to send traffic. Actually he's the only one I read reliably now but I saw a few shreds from Fred VE3FAL come by.

I realize email to this yahoo group works pretty well and individuals can decide to use IM to stay in touch but maybe something like IRC would be more appropriate? This could be used by NCS to ask for a relay by a remote station for example or to report signal strengths without using RF.

In my view, under these conditions (real people in real trouble) we should use the radio as little as possible to exchange pleasantries. Use it to send calls asking for traffic and the occasional propagation test. Keep chatter to a minimum so that faint signals have a chance to get through. Use internet for backchannel comms and coordination.

Thoughts? Crazy idea? Something to explore after Isaac is done maybe?

Good morning to all. I just heard Fred VE3FAL on 40m but he did not hear my reply, possibly because I was away from my screen for a few minutes. I then sent the standard 'relay for AD5XJ' message. Let me know if you read it.

I'll stay on 40m until we decide a different frequency would be better. Skype me on 'qadude' or send me email as needed. I'll be away for a bit this morning.

Excellent news! I can see only shreds of his transmissions so I'm not in a position to help right now. Will keep an eye on the channel and I'm available using internet channels of course. If someone feels I should stay on 40m please say so. It seems that if SATERN decided 20m is the band to use 40m won't see any traffic. Correct me please if I'm misunderstanding the situation.

When possible please summarize Ken's situation for us.

I just went to the site and Netlogger is windows only. This would block out our Linux and Mac users.

I wonder how much of a stretch it would be to request an IM function in NBEMS? I'm guessing this
would require an IM server in a secure data center somewhere.

Can I run Netlogger on a MAC? Or Linux?
Yes. This can be accomplished in a couple of different ways. On an Intel based machine, you can install Windows as a virtual machine and run Netlogger within the virtual machine environment. Parallels, VirtalBox, and VMWare all provide this capability.

If you do not want to mess with virtual machines, take a look at NetLoggerWeb in the sidebar.

I saw a partial copy of that message. As others have reported AD5XJ drifts in and out, probably worse here a little farther North.

I don't see Ken on the Net Logger so I'm not sure if he has internet. Given that he's on the air without backup power I conclude his power has been restored.

Gary,

I installed NetLogger and found the net. I'm connected as a 'monitor'
but see no activity. I don't think Ken is using this right now.

Fldigi can only decode flmgs messages when it receives the whole thing.
If it receives a :beg but never and :end it'll sit there decoding
forever. This is why it's so nice that fldigi shows the received text.
Humans stand a decent chance of pulling data out of a currupted message.
If all that happens under water then you may end up throwing away a 95%
message that was perfectly servicable.

The Tropical Storm Isaac appears to be weakening even further as it moves North across Louisiana. It is a very large storm even after making landfall nearly two days ago.

The NWS is predicting it will degrade to Tropical Depression level before 8PM this evening.

For these reasons, the SATERN Digi Net will stand down from Delta II to Delta I level at 14:00 CDT (19:00z) today.

The normal Saturday morning SATERN Digi Net will meet as usual Saturday 12:00 NOON CDT (17;00z).

Repeat to others as desired...

Bill,

Have a look at your email program. It should tell you where your email is going to. In this case it's going to the yahoo group (paNBEMS@yahoogroups.com) which means everyone on the list gets it. It is quite important that you know how your email program (or website) works so that you are aware of where your email goes to. If this all sounds confusing perhaps there is someone local to you who can spend a few minutes to explain it to you?

4963. Thoughts on NBEMS HF digi nets, newsgroup and IM after Isaac

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-31 18:32:51 UTC
From: KB3FXI
Topic: 4963 Message: 4963

Hello all,

As you know, Ken (AD5XJ) in Houma LA was running NCS for the SATERN Southern Territory HF digital net during the onset of Hurricane Isaac. I was checked in an Ken asked me to man the frequency because he was getting nearby lightning strikes. That was Wednesday and Ken wasn't able to get back on until yesterday afternoon. So, myself and quite a few other folks from the paNBEMS group wound up keeping the net active until Ken could get back.

Thanks to all who jumped in on the 20m and 40m frequencies to check in or just monitor.

In spite of the fact that there was very little in the way of check ins from the effected area, I believe it was a good exercise... and, as is always the case, many lessons are learned.

Here are my thoughts on a few different points relating to HF digital nets:

SCHEDULES...

We should consider that there could, and will be, folks in the effected area without power or internet access. These operators, who are in the dark, rely strictly on their training and knowledge of their previously prescribed operational guidelines.

It is my opinion that, regardless of band conditions, whenever possible, a presence be maintained on the primary frequency for a given net. It is for this reason that paNBEMS HF training nets stick to our schedules, even when conditions are poor. This also gives us valuable experience in working under less than perfect conditions and for handling relays.

If the primary frequency is under poor band conditions, necessitating a switch to a backup frequency, I think it would be prudent to have a few liaisons stay on that frequency (if extra ops are available), periodically announcing that the backup frequency is active.

Another point to consider is that most HF emcom activations involve primary nets on Phone (voice) channels. Perhaps, since the digital nets are much more lightly populated, operational digital nets should consider bulletin schedules. An example might be to have a standard operating procedure for a given net to transmit a situation report bulletin followed by calls for emergency or priority traffic at 20 and 40 minutes past the hour. This would allow stations who only have the capability of running one HF frequency at a time, to jump down off a primary net to receive valuable info from the digi net bulletin.

LIAISONS...

As mentioned above, I think having liaisons to move info to and from various nets, from different bands and modes, is something that should be given consideration and worked into plans and drills.

INSTANT MESSAGING/INTERNET CHAT

As was mentioned in previous posts to the paNBEMS list, Instant Messaging/Internet Chat could be effectively used to help eliminate unnecessary chatter on the HF nets (and maybe equally importantly, to move much of the chatter off the email list here).

As we consider the use of Internet Instant Messaging, I would urge some caution in two areas.... 1) we don't become overly dependent on the Internet and 2) we don't wind up excluding valuable information from the nets.

I think we're all pretty cognizant of the risks associated with point number one, but I'm more concerned with excluding information from the digital nets with the use of Instant Messaging.

One observation, directly relating to this point, that I made during the time we stood in for Ken on the SATERN net is that we were getting notes from folks here on the email list indicating that they were monitoring other nets as well as the SATERN digi net, and were also giving signal reports on other stations and NCS.

Those monitoring the digital net, who didn't have access to the Internet traffic, would not have been aware that, for instance, they may have had good copy on a station who also indicated that they copied ncs and could be used for a relay... or, if someone needed to move info to another net, that there was a liaison station monitoring both.

STRENGTH IN NUMBERS (especially on 20m)

Effective net operations on 20m is a huge challenge as many stations will be in skip zones and conditions can be quite predictable. The more stations we have for relays under such conditions, the better we will be able to function on wide area nets, especially on 20m.

I DON'T CLAIM TO KNOW IT ALL

So, these are just some of my observations and opinions. I've been at HF sound card digi comms for about 10 years now and I still learn something new every day.

The more nets, drills and actual activations in which we all participate, the more we will all learn together.

HOTWASH - WHAT WORKED, WHAT COULD BE IMPROVED?

I've participated in many County and local emergency management exercises and they ALWAYS have a hotwash (discussion) after the drill. There is always a great deal learned at an exercise hotwash, and guess what the biggest challenge always is... communications!

I can't stress enough to everyone on the list to please provide us all here on the list some of your after action reports or even just some observations, opinions and suggestions you may have from your experiences in your local nets and drills. Please post these ideas and reports to the list.

Thanks again to all who helped on the air over the last 2 days and to all on the list here.

I think I can speak for everyone involved that we were quite relieved when AD5XJ got back on the SATERN 20m digi net frequency yesterday and reported that all was well.

-Dave, KB3FXI

4964. RE: [paNBEMS] Thoughts on NBEMS HF digi nets, newsgroup and IM after Isaac

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-08-31 22:31:01 UTC
From: John L. Rogers
Topic: 4963 Message: 4964

A hotwash or after-action review or constructive criticism is always welcome Dave.

SCHEDULES

Implementing an every 20 minute - or whatever - net bulletin or call for traffic on each digital frequency seems very appropriate considering the interesting propagation we all experienced during the Hurricane Isaac activation. I am in full agreement with your observation that there may or will be stations who will attempt to pass traffic on the frequencies they are most familiar with. We have to be ready.

We were most fortunate to have several stations on board who had good propagation to most of the net and who also had the capability to work and/or monitor several frequencies and modes. For instance, the SATERN SSB nets on 20, 40, and 75 were often readable. It is conceivable that a Shelter operator may have phone but no digital capabilities. With high traffic volumes the digital guys could really be of service. It may be advantageous to both the phone and digital groups to develop closer ties.

And we should be sure that we are comfortable with all the traffic formats including NTS. I kept hearing directives on the 20 meter phone nets specifying the use of NTS and NHS formats only.

Olivia 8/500 printed even with extremely weak signals and noise. Very impressive mode. Most of the time I could not hear or see AD5XJ on the waterfall. But, he was still printing!

INSTANT MESSAGING/INTERNET CHAT

The use of email and, toward the end of the exercise, NetLogger for instant messaging did indeed reduce the chatter on net frequencies. These methods of communicating may be extremely useful in future situations for those who have internet capabilities.

However, I agree that we must continue to train with the assumption that we may or may not have the internet or cell service or land lines. Those who know me are probably tired of hearing about the Johnstown Flood of 1977. Bottom line - the entire communications infrastructure was wiped out. Worst case scenario. Telephone switch gear was under water and lightening strikes took out mostly everything else. Power was off. Police and Fire Departments had only the mobile units that were still functional. For the first days the most reliable communications were via ham radio. And later, when commercial and military communications were put in place, Ham Radio was the only sure method of moving Health & Welfare traffic. Commercial

circuits were still overloaded with operational traffic. I know that I may be preaching to the choir but catastrophic communications infrastructure failure can happen...and it has.

Gentlemen, it was an honor to be part of this activation with you. As the saying sort of goes - That which does not silence our rigs makes us stronger. It is great that this turned out to be mostly a practice exercise.

Subject: [paNBEMS] Thoughts on NBEMS HF digi nets, newsgroup and IM after Isaac

Hello all,

As you know, Ken (AD5XJ) in Houma LA was running NCS for the SATERN Southern Territory HF digital net during the onset of Hurricane Isaac. I was checked in an Ken asked me to man the frequency because he was getting nearby lightning strikes. That was Wednesday and Ken wasn't able to get back on until yesterday afternoon. So, myself and quite a few other folks from the paNBEMS group wound up keeping the net active until Ken could get back.

Thanks to all who jumped in on the 20m and 40m frequencies to check in or just monitor.

In spite of the fact that there was very little in the way of check ins from the effected area, I believe it was a good exercise... and, as is always the case, many lessons are learned.

Here are my thoughts on a few different points relating to HF digital nets:

SCHEDULES...

We should consider that there could, and will be, folks in the effected area without power or internet access. These operators, who are in the dark, rely strictly on their training and knowledge of their previously prescribed operational guidelines.

It is my opinion that, regardless of band conditions, whenever possible, a presence be maintained on the primary frequency for a given net. It is for this reason that paNBEMS HF training nets stick to our schedules, even when conditions are poor. This also gives us valuable experience in working under less than perfect conditions and for handling relays.

If the primary frequency is under poor band conditions, necessitating a switch to a backup frequency, I think it would be prudent to have a few

liaisons stay on that frequency (if extra ops are available), periodically announcing that the backup frequency is active.

Another point to consider is that most HF emcom activations involve primary nets on Phone (voice) channels. Perhaps, since the digital nets are much more lightly populated, operational digital nets should consider bulletin schedules. An example might be to have a standard operating procedure for a given net to transmit a situation report bulletin followed by calls for emergency or priority traffic at 20 and 40 minutes past the hour. This would allow stations who only have the capability of running one HF frequency at a time, to jump down off a primary net to receive valuable info from the digi net bulletin.

LIAISONS...

As mentioned above, I think having liaisons to move info to and from various nets, from different bands and modes, is something that should be given consideration and worked into plans and drills.

INSTANT MESSAGING/INTERNET CHAT

As was mentioned in previous posts to the paNBEMS list, Instant Messaging/Internet Chat could be effectively used to help eliminate unnecessary chatter on the HF nets (and maybe equally importantly, to move much of the chatter off the email list here).

As we consider the use of Internet Instant Messaging, I would urge some caution in two areas.... 1) we don't become overly dependent on the Internet and 2) we don't wind up excluding valuable information from the nets.

I think we're all pretty cognizant of the risks associated with point number one, but I'm more concerned with excluding information from the digital nets with the use of Instant Messaging.

One observation, directly relating to this point, that I made during the time we stood in for Ken on the SATERN net is that we were getting notes from folks here on the email list indicating that they were monitoring other nets as well as the SATERN digi net, and were also giving signal reports on other stations and NCS.

Those monitoring the digital net, who didn't have access to the Internet traffic, would not have been aware that, for instance, they may have had good copy on a station who also indicated that they copied ncs and could be used for a relay... or, if someone needed to move info to another net, that there was a liaison station monitoring both.

STRENGTH IN NUMBERS (especially on 20m)

Effective net operations on 20m is a huge challenge as many stations will be in skip zones and conditions can be quite predictable. The more stations we have for relays under such conditions, the better we will be able to function on wide area nets, especially on 20m.

I DON'T CLAIM TO KNOW IT ALL

So, these are just some of my observations and opinions. I've been at HF sound card digi comms for about 10 years now and I still learn something new every day.

The more nets, drills and actual activations in which we all participate, the more we will all learn together.

HOTWASH - WHAT WORKED, WHAT COULD BE IMPROVED?

I've participated in many County and local emergency management exercises and they ALWAYS have a hotwash (discussion) after the drill. There is always a great deal learned at an exercise hotwash, and guess what the biggest challenge always is... communications!

I can't stress enough to everyone on the list to please provide us all here on the list some of your after action reports or even just some observations, opinions and suggestions you may have from your experiences in your local nets and drills. Please post these ideas and reports to the list.

Thanks again to all who helped on the air over the last 2 days and to all on the list here.

I think I can speak for everyone involved that we were quite relieved when AD5XJ got back on the SATERN 20m digi net frequency yesterday and reported that all was well.

If you think 8/500 Olivia is a good weak signal mode, you should experience 32/1000 Olivia. If there is no QRN it is better yet...and slower. Not on the lower bands with storm noise...longer tones are better for that.

Subject: RE: [paNBEMS] Thoughts on NBEMS HF digi nets, newsgroup and IM after Isaac

A hotwash or after-action review or constructive criticism is always welcome Dave.

SCHEDULES

Implementing an every 20 minute – or whatever – net bulletin or call for traffic on each digital frequency seems very appropriate considering the interesting propagation we all experienced during the Hurricane Isaac activation. I am in full agreement with your observation that there may or will be stations who will attempt to pass traffic on the frequencies they are most familiar with. We have to be ready.

We were most fortunate to have several stations on board who had good propagation to most of the net and who also had the capability to work and/or monitor several frequencies and modes. For instance, the SATERN SSB nets on 20, 40, and 75 were often readable. It is conceivable that a Shelter operator may have phone but no digital capabilities. With high traffic volumes the digital guys could really be of service. It may be advantageous to both the phone and digital groups to develop closer ties.

And we should be sure that we are comfortable with all the traffic formats including NTS. I kept hearing directives on the 20 meter phone nets specifying the use of NTS and NHS formats only.

Olivia 8/500 printed even with extremely weak signals and noise. Very impressive mode. Most of the time I could not hear or see AD5XJ on the waterfall. But, he was still printing!

INSTANT MESSAGING/INTERNET CHAT

The use of email and, toward the end of the exercise, NetLogger for instant messaging did indeed reduce the chatter on net frequencies. These methods of communicating may be extremely useful in future situations for those who have internet capabilities.

However, I agree that we must continue to train with the assumption that we may or may not have the internet or cell service or land lines. Those who know me are probably tired of hearing about the Johnstown Flood of 1977. Bottom line – the entire communications infrastructure was wiped out. Worst case scenario. Telephone switch gear was under water

and lightening strikes took out mostly everything else. Power was off. Police and Fire Departments had only the mobile units that were still functional. For the first days the most reliable communications were via ham radio. And later, when commercial and military communications were put in place, Ham Radio was the only sure method of moving Health & Welfare traffic. Commercial circuits were still overloaded with operational traffic. I know that I may be preaching to the choir but catastrophic communications infrastructure failure can happen…….and it has.

Gentlemen, it was an honor to be part of this activation with you. As the saying sort of goes – That which does not silence our rigs makes us stronger. It is great that this turned out to be mostly a practice exercise.

Hello all,

W1HKJ just put out a new FLDIGI alpha after someone submitted a bug report that seems to have identified the reason for occasional hang up with text transmission.

I confirmed the bug and the fix with the new alpha which was a result of entering a backspace as the first character in the tx window buffer, which causes the buffer to be locked. I had only run into this issue on a few occasions and could never make any correlation as to why the text wouldn't transmit. Someone out there made a really good catch and reported the bug to W1HKJ, so I'm pretty certain the bug will be fixed and we'll have a new release soon to correct that problem.

We'll put out a notice here as soon as the next official release of FLDIGI comes out.

I think the regular bulletin idea is a very good one. I'll try to see how it works for us on SET. I'm a little concerned about frequency coordination in a wide area disaster, since there are several groups using 3583.5 - which is also claimed by SATERN. With the bulletins, we can try to move people to other frequencies as needed.

Using radio-based email for coordination would not be a bad idea, either. If you can do FLDIGI, you can probably do WINMOR and almost certainly do PSKMail (since it runs on top of FLDIGI).

Topic: 4970 Message: 4970

I think it would be very nice if people would NOT copy the full context of a message when they reply to it. Often this amounts to the full train or thread of messages being repeated dozens of times. Please note that the full context of all messages is saved (forever?) on Yahoo and it is very easy to go to the group and read the original message of a thread there if anyone needs more than the "subject" line to refresh their memory.
Most of us have figured out how to use a rather sophisticated piece of software like Fldigi, so I don't think it should take us a real long time to figure out how to do this. Perhaps Dave or someone with the capability could make a You-Tube video. on how to use the yahoo message server efficiently.
It would make it much easier for those who receive Email digest versions of the group traffic, if we did not need to repeatedly scan through the same 20 or 30 line message to see a short one line comment. Granted many people simply hit "reply" on their particular mail program and dont know how to set it to - "DO NOT include the full context of the original".
I think it would save storage space on Yahoo if they did not have to save the same message dozens of times also. (not that we care about how many terrabytes Yahoo needs anyway)
Thanks - KD2DO
P.S. Why not copy this (in its entirety) to similar other groups like NBEMSham and ny-nbems because there may be one or two individuals on the planet who subscribe to those and not this group.

Ok, Frank.

I had only run into that issue a few times and couldn't make any correlation as to what could have been triggering it.

There are a few new things in addition to the bug fix that W1HKJ is working on with FLDIGI but I feel pretty sure we'll have a new release in the next week or so.

I'll post any updates as soon as I get them.

4973. High speed alpha mode testing and possible new NBEMS application

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-09-07 19:26:21 UTC
From: KB3FXI
Topic: 4973 Message: 4973

Hello all,

We're continuing testing with some new high speed FSK modes (DominoEX and Thor) as well as testing with several multi channel PSK modes.

The results on HF have been good, but the faster modes are not as reliable as MT63 1k long, which is our standard mode for larger messages on HF.

Some of the high speed modes are narrower in waterfall bandwidth than MT63 1k long but up to 3 to 5 times faster. Every mode has their trade-offs and these faster modes lack the massive amount of forward error correction that MT63 has, which results in a few missed characters here and there (usually as a result of static crashes/QRN).

Discussion was started recently on NBEMSham on incorporating some AMP (Amateur Multicast) techniques with NBEMS.

The way I understand AMPS is that the checksum function for a given message would be broken up in several blocks rather than on the whole message, as is the case with FLMSG or FLMSG. The receiving station could miss the first block on the first transmission, the 2nd block on the second transmission and the 3rd block on the third transmission but would then have the ability to assemble all the successfully received blocks, winding up with a 100% confirmed copy.

In the same scenario with FLMSG, all 3 transmissions would result in a checksum error.

BTW, I have, on several occasions, made manual corrections from two failed FLMSG checksum messages, by "eyeballing" the errors, cutting and pasting, then saving the fila and was able to then open with FLWRAP to confirm 100%, but that's a pretty tedious process.

Even with the overhead of the extra checksum data, and the fact that we might send the same message, in a single transmission, 2 or 3 times, we might wind up with the ability to send a formatted message on a narrower mode, and in about the same time as a single message transmission with MT63 1k long. The test will be to see if this new functionality is made available (FLAMP) if we get more consistent 100% confirmed reception on bulletins and longer messages.

Another option that may become available in FLAMP will be for a receiving station that did not confirm 100% to manually poll the sending station for the blocks of the message transmission that were missed. This is the same technique that is used with EasyPal, but we would have the added advantage of choosing from a multitude of modes available in FLDIGI depending on conditions.

We're waiting to see if Dave (w1hkj) produces an alpha version of FLAMP for testing. We'll be sure to make an announcement here if he does and I'll be looking for some stations to do some testing with.

Correction to my previous comments...

Some of the new high speed modes are actually over 6 times faster than MT63 1k long. We tested today with 3xPSK250R which is 660 wpm (vs MT63 1k long at 100 wpm) and is just under 1000 Hz wide. Even under some light to moderate static crashes, we were able to pass several 100% confirmed FLMSG messages and had several others with only a few missed characters.

Every mode has their trade-offs and these faster modes lack the massive amount of forward error correction that MT63 has, which results in a few missed characters here and there (usually as a result of static crashes/QRN).

Discussion was started recently on NBEMSham on incorporating some AMP (Amateur Multicast) techniques with NBEMS.

The way I understand AMPS is that the checksum function for a given message would be broken up in several blocks rather than on the whole message, as is the case with FLMSG or FLMSG. The receiving station could miss the first block on the first transmission, the 2nd block on the second transmission and the 3rd block on the third transmission but would then have the ability to assemble all the successfully received blocks, winding up with a 100% confirmed copy.

In the same scenario with FLMSG, all 3 transmissions would result in a checksum error.

BTW, I have, on several occasions, made manual corrections from two failed FLMSG checksum messages, by "eyeballing" the errors, cutting and pasting, then saving the fila and was able to then open with FLWRAP to confirm 100%, but that's a pretty tedious process.

Even with the overhead of the extra checksum data, and the fact that we might send the same message, in a single transmission, 2 or 3 times, we might wind up with the ability to send a formatted message on a narrower mode, and in about the same time as a single message transmission with MT63 1k long. The test will be to see if this new functionality is made available (FLAMP) if we get more consistent 100% confirmed reception on bulletins and longer messages.

Another option that may become available in FLAMP will be for a receiving station that did not confirm 100% to manually poll the sending station for the blocks of the message transmission that were missed. This is the same technique that is used with EasyPal, but we would have the added advantage of choosing from a multitude of modes available in FLDIGI depending on conditions.

We're waiting to see if Dave (w1hkj) produces an alpha version of FLAMP for testing. We'll be sure to make an announcement here if he does and I'll be looking for some stations to do some testing with.

4975. Tyler Texas Digital ARES Symposium

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-09-09 01:36:27 UTC
From: wb4wxd
Topic: 4975 Message: 4975

I wanted to let you know that I was invited to present NBEMS at a digital forum held by our ARES DEC in Tyler today. I was the first presenter going over NBEMS and was followed by Winlink and D-Star. I think I did well as the consensus of those not familiar with NBEMS is that it is a system everybody needs. I used some youtube video and a ppt from the Maine group, demo'd the suite with some cheap Chinese handhelds on the frs freqs and finished by playing a tape recorded message across the auditorium to my buddy as the receiving station. We had my laptop and Bob Dyer's both connected to projection screens so you could see both sender and receiver at the same time. One of the Winlink guys downloaded the suite and loaded it on his laptop while I was speaking. ALL 3 computers received the tape recorded 213 form flawlessly and folks were amazed when the windows popped up after the reception. We got compliments from the NTX SEC and several hams from Dallas who came in to observe and I have been asked to repeat the lecture at a couple of nearby ham clubs.
Wow, what a great day for the use of NBEMS I just sent out 3 emails with information and I had folks get my lecture files and video off my thumb drive.

Gunny,

I am using the Ft-897D and the Signalink USB. An excellent combination.
No problems at all. You connect the Signalink to the 6 pin mini din on the back of the radio. You can leave the microphone connected. I also built up two internal batteries using 11 C-cell sized NiMh cells with solder tabs for each battery. Using a small netbook computer with the signalink, it makes a great portable station on NBEMS.
No issues what so ever.

From: Jon Perelstein
Topic: 4976 Message: 4979

Ditto what Dick WA3USG said. A great combination.

A few things to keep in mind if you decide to go that route:

1. When doing SSB, you want to set the mode to DIG. That makes sure that the mic is not hot when you're transmitting, otherwise the ambient noise in your shack may get transmitted over the air. Also, in DIG mode, the CAT control will continue operating as it should.

2. When doing FM, you want to set the mode to PKT, for the same reasons

3. If you set menu item 038 (DIG MODE) to PSK-U, it sets it right for all SSB NBEMS operations, with a sweet spot at 1000Hz (1KHz). If you do that you don't have to mess with 036 or 039.

4. The Signalink is a VOX, so set the gain on menu item 040 (DIG VOX) to 0

5. You will have to adjust the values for menu 037 (DIG GAIN) and 071 (PKT 1200 GAIN) based on your computer's output level and the Signalink gain levels. As much as possible, using mid-way settings on all three makes for higher quality signals.

6. For the FT-897D, the best way to set power level is to set your power fairly high (e.g., 80 or 90 watts) and then set the TX gain on the Signalink so that your actual output power is 20-30 watts (depending on what you want). On SSB, watch the ALC and make sure that you're NOT more than about 1 dot of ALC.

John,

There is really no battery holder. I used 11 cells as in the link below:

http://www.batteryspace.com/NiMH-Rechargeable-Cell-C-Size-1.2-V-5000-mAh-with-Button-Tabs.aspx

This is a lot cheaper then the Yaesu battery and it it actually is higher in capacity (Yaesu is 4500 mah ... this pack is 5000 mah)

I soldered them in series. 11 cells at 1.2 volts gives you 13.2 volts. You'll have to take the bottom off of the radio and lay the batteries out to see how they will fit. Then solder them in series & cover them all with electrical tape. If you make two packs with 11 cells each, you have two complete batteries that you can switch between with the battery switch on the top of the radio. I used computer connectors to connect the batteries to the pins where the Yaesu battery would connect ... and naturally added a 5 amp fuse on the output of each battery. The batteries just lay in the battery tray. When you put the radio back together, they make a nice fit ... they don't move around at all.

I also added two Phono connectors where the Yaesu battery charging ports are on the back of the radio. I charge each battery through them. I use the charger below ... works GREAT!

http://www.hobbypartz.com/60p-dyc-1004.html

If you don't want to go through all of this, you'll pay more then 3 times as much for the Yaesu batteries and charger. Additionally the Supermate DC6 charger will charge ANY kind of other batteries that you have in the shack,

I enjoy building things like this. Just built up a 14.8 volt LiPo battery using four 10 AH cells. Gives me 14.8 volts (actually 15 volts so be careful) at 10 amp hours at less then half the weight and size of a 12 volt 7 ah battery that is commonly used in UPS systems. It's rated at a max discharge current of 50 amps ... I've run the 897 for over 10 hours with it. I keep the charging current down to 1 amp because the LiPo batteries are famous for blowing up! So far I'm still alive & the house is intact. I really think with a 1 amp charge current, it's pretty safe.

4982. Radio ABC's

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-09-11 19:49:15 UTC
From: KB3FXI
Topic: 4982 Message: 4982

Hello all,

Here's a link to a very basic youtube video I recently came upon. While the video is most specific to 2-way voice communications, it is also applicable to digital communications as well.

http://youtu.be/3W3A_RfTxrI

As NBEMS/FLDIGI alpha/beta team members continue testing with new high speed modes that will enable much larger file transfers and messages, it's still very important to always follow the "ABC's" of radio emergency communications:

Accuracy

Brevity

Clarity

What prompted me to make this post is that I'm currently listening to the amazingly efficient voice communications of the 9/11 NYPD during the attack on the World Trade Center.

NBEMS digital communications offer some huge advantages but NBEMS also has it's challenges.

One of the main advantages is confirmed 100% messaging and an accurate recorded record of all previous communications, which eliminates the need for information requests of previously transmitted information, even when station operators are pulled away from their station.

A few of the main challenges of NBEMS communications, especially on HF, are forward error correction delays, doubles and our limited ability to handle only a finite number of check ins.

Net Control Operators and net participants should take the opportunity in every net exercise to practice their ABC's. Net Control Stations (NCS) should always give concise net directions and all check in participants should closely follow the direction of NCS.

Each net should practice techniques in efficiency of check ins and traffic handling. For example, follow check in procedures as prescribed by NCS. If NCS asks for only call sign, location and statement of traffic for general check ins, follow those directions. Here's a examples of paNBEMS check ins, as directed by NCS, with and without traffic:

kb3fxi, Pittsburgh PA, 1-NET

or, check in without traffic:

kb3fxi, Pittsburgh PA

Liaison Stations can also greatly help in an emcomm situation by consolidating information to and from local and regional nets.

Keep in mind that every net won't be the same... and it's safe to say that NO actual emergency situation will every be the same. It's equally important that NCS's adapt to changing circumstances and conditions, and net participants follow the direction of NCS.

Be patient, wait for your call, and follow the ABC's.

-Dave, KB3FXI
paNBEMS

P.S. If you go to the following link on our Yahoo Groups site, then go to the "Procedures" folder, you will find the "paNBEMS_NCS_Standards" PDF document.

paNBEMS always welcomes input. Please review the document and let us know, here on the list, what comments, suggestions or experiences you may have to contribute to the discussion.

Enter your vote today! A new poll has been created for the
paNBEMS group:

Do you have 30m capabilities?

o Yes
o No
o My transceiver has 30m but I can't tune my antenna on 30m

To vote, please visit the following web page:
http://groups.yahoo.com/group/paNBEMS/surveys?id=2435734

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

4989. 14.065 Olivia 8/500 1500 hz 20120918

Hello all,

I would recommend that everyone running NBEMS FLDIGI upgrade to this new release.

This version has the bug fix for hanging up in transmit if you happen to hit the backspace key as the first action in the transmit text box.

Subject: [NBEMSham] fldigi-3.21.51 posted

http://www.w1hkj.com/

flmsg/flamp stream processing
* added parsing of cmd line parameters when opening flmsgupon
completion of wrap file extraction
* added parsing of flamp text streams
* modified socket arq to separate socket i/o from both signal
processing and main thread.

DominoEX varicode
* Correct table entries for { }
- values incorrect in original gmfsk implementation

WRAP binary files
* Add character handling in Rx for both received and transmit
echocharacters when sending binary data.

Backspaces patch
* Correct failure to send Tx text when first character entered is
a backspace.

UI enhancements
* Added configure item in UI general to open confirmation dialog
when user exits program
* Fix RPC log TimeOn value, without this, timeon == timeoff.patch
corrects data transfer to CQRlog.
* Add new shortcuts in TX widget.
- SC-c for <CALL>
- SC-n for <NAME>
- SC-r for <RST>

- SC-l for <MYLOC>
- SC-h for <MYQTH>
- SC-a for <ANTENNA>
- SC means Shift-Control.

Combo update
* Updated combo box widget class

Socket send on Linux
* Modified socket send routine to test for kernel send socket failure

Extract timeout
* Removed 16384 size limitation on WRAP file extract processing.
* Added 10 second timeout. Extract process reset after a 10
secondperiod of no incoming text.

ASCII tables
* Added ASCII3 table
- ASCII - used for RTTY
- ASCII2 - used for ARQ / PSKMAIL
- ASCII3 - used for all other text

73, Dave, W1HKJ

Andy,

That was most likely me.

I had about 70% copy on your calls but I didn't get any response.

We must be too close for the current conditions.

Dave,

I copied your call and parts of a transmission at 1952Z - lots of QSB. - not enough to make out the message.

We only have a 200 mi. path between us so I'm not surprised 30m isn't feasible. And an A-index of 14 doesn't help much...

4999. Fw: [NBEMSham] flmsg-1.1.24 posted

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-09-20 23:36:29 UTC
From: David Kleber
Topic: 4999 Message: 4999

Hello all,

Another new release... FLMSG 1.1.24.

paNBEMS would recommend that all NBEMS ops upgrade to this latest versions of both FLMSG (1.1.24) and FLDIGI (3.21.51) at http://w1hkj.com/download.html. If you're not sure what versions you currently have, open either application, go to Help then click about to see what your current versions are.

Remember that after you install this updated version of FLMSG, make sure you point to the new FLMSG executable from FLDIGI under Configure, Misc, NBEMS tab, "Find FLMSG".

Here's a video that shows the process:
http://youtu.be/psP489NOkg0

Subject: [NBEMSham] flmsg-1.1.24 posted

http://www.w1hkj.com/

Base 128/256
* Modified to be compatible with MT63 control codes

waiting for check
* suppress multiple nags if callsign not filled

Xmlrpc interface
* Added xmlrpc interface to fldigi
- query mode
- set mode

Socket address/port
* Added socket configure dialog

File transfer
* Added escape encoding for all file types
- Allows compressed files to transferred using either
base64, base128 or base256 with escaped control bytes.
* Added ability to transmit generic files including:
- jpeg image
- png images

- xls, doc and other office documents
* Transfer time computed for various levels of compression /
base encoding

Combo box update
* Corrected combo box popup browser resizing

Fred,

I'm guessing Opera is one of the super slow motion modes for swapping call signs way down into the noise. Does it sound like computer generated CW with uneven length tones?

Fred,

I see a tone at about +2200. I just called CQ at +1500. Will be back at the radio in a little bit. It's 0110z

5010. Transmit and Receive Audio Tips

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-09-22 15:20:01 UTC
From: KB3FXI
Topic: 5010 Message: 5010

Hello all,

Here are some tips for making the best of your transmitted and received audio with NBEMS/FLDIGI:

1) Make sure that you have compression and noise reduction disabled on your transceiver and set AGC (Automatic Gain Control) to fast

2) Check your Operating System and Sound Card advanced settings and disable any and all sound effects, automatic equalization and noise reduction on both mic/record and speaker/playback

3) Transmit audio should be adjusted so that you have little or no ALC reading from your transceiver's ALC meter when transmitting (here's a good video on the subject of ALC http://youtu.be/I3CwHaX7t5M)

4) Your sound card receive levels (usually labeled as mic, record or input) should be adjusted so that your waterfall is black with light speckled blue when no signals are present and under relatively quiet band conditions. Light or weak digital signals should show on the waterfall as blue with a tinge of yellow and strong digital signals yellow with a tiny tinge of red (strong MT63 signals should be blue with a slight tinge of yellow) - if strong received digital signals are all red, your record or mic volume is too high or "hot" which will result in over driven audio to the sound card resulting in reduced accuracy on receive

5) If your transceiver has receive audio bandpass filters, try narrowing down the filters on weak digital signals which can improve your decoding accuracy

Gary,

That's not what I heard. I think the tones from Opera are all on the same audio frequency.

Dave,

Thanks for the tips!

I've also found that on less-powerful machines (like my 1.6GHz Atom netbook running XP) it helps to adjust my processor scheduling to favor background services. This improved the performance of my sound card driver and improved my decode results.

High system latency levels were also disrupting my RX decode on occasion. I used the free DPC Latency Checker app (http://www.thesycon.de/deu/latency_check.shtml) and found several processes that were causing my latency to spike. Killing those processes improved fldigi's RX performance significantly, especially on non-FEC modes.

5013. FLAMP testing today (Sept 22) on 7.0725 USB

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-09-22 16:11:43 UTC
From: David Kleber
Topic: 5013 Message: 5013

Hello all,

If anyone on the list is interested in testing the new FLAMP application today, please drop me an email at kb3fxi at yahoo dot com. I will be monitoring 7.0725 USB, 1500 Hz waterfall, 8/500 olivia for the better part of the day until about 6pm ET.

We would like to do a bit more limited testing before we open it up to all.

Keep in mind that these are alpha versions and there will be many updates to keep up with. I think we've had 4 updates in as many days but we seem to be on pretty stable versions of FLDIGI EXP and FLAMP.

David,

I've been working too much to have kept up on the lists - where can I get more info on FLAMP?

I'm on 7.0725 but of course, too far from your QTH.

20 M could work once I get whatever downloaded and setup - happy to test with you if we can find a good freq.

This is what I found about Opera
<http://blog.g4ilo.com/2012/01/operatic-debut.html> de Steve VE6VS

Information about it seems to be a bit hard to come by, but there is an OPERA Yahoo group <http://groups.yahoo.com/group/O_P_E_R_A_/> from where I presume you can download the latest version of the software. I managed to find a copy and was surprised at the sophistication of the program. It already has working CAT support for many transceivers including my Elecraft K2 and K3. It also has a built-in chat system showing reported signals from other users.

Although the new mode is apparently the invention of Graham, G0NBD, the program has been written by Jose Alberto Ros, EA5HVK, author of the ROS digital mode, and there are clear similarities in the user interface. The program supports all amateur bands from VLF to 6m but currently you can only select the frequencies 136kHz and 500kHz.

There are actually two OPERA modes, one of which is claimed to be even better (i.e. work with even weaker signals) than the WSPR mode. What is particularly interesting about OPERA though is that it does not need to use a sound card to send a transmission. Although the sound card is an option - and a convenient one for users already set up for data modes - OPERA actually (if I understand correctly) uses on/off keying, in other words CW (though not Morse code.) This offers the potential for long distance contacts to be made using ultra-simple QRPP (very low power) transmitters designed for QRP CW use - though I imagine that success depends on use of a very narrow bandwidth so you might need to pay more attention to transmitter stability than you would need for Morse code.) If the digital encoding scheme is published then it would also be simple to build microcontroller based beacon transmitters.

As I am not equipped to operate on the 500kHz or 136kHz bands I have been unable to try OPERA out on the air myself. But it certainly looks an interesting mode, especially if it is opened up to allow use on the HF bands where it could be used as an alternative to WSPR and QRSS CW modes.

5026. FLAMP and FLDIGI experimental mode testing - now open!

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-09-26 02:16:07 UTC
From: paNBEMS-owner@yahoogroups.com
Topic: 5026 Message: 5026

QST members of paNBEMS...

W1HKJ, lead developer of NBEMS, has agreed to open up testing of FLDIGI and FLMSG alpha versions to a wider audience. paNBEMS would like to encourage those interested in testing the experimental high-speed modes in the FLDIGI alpha and the FLAMP application.

The link for the downloads are:

FLDIGI EXP - http://www.w1hkj.com/alpha/fldigi/v3.21/
FLAMP - http://www.w1hkj.com/alpha/flamp/

We encourage properly licensed stations to download and test the alpha versions, but keep in mind that they are in developmental stage and updates can come fairly quickly. Stations who decide to test should commit to producing basic reports on performance and bug issues with as much detail as possible (i.e. alpha version numbers, computer operating system, details on bugs and events leading to an issue).

Prior to testing with any other stations, please make sure that all stations in the test are running the current versions from the links above. Please confirm on the air with participating test stations of the current up to date version with which you are running. To check your current version of FLDIGI and FLAMP, click on "Help", then click on "About".

Bug reports can be sent to my email address at kb3fxi at yahoo dot com. I will filter out known bugs already reported to the NBEMS alpha team and pass along any new bug reports of which the alpha team may not be aware. Additionally, those testing the alpha's are encouraged to share their experiences to the paNBEMS community by posting reports to our Yahoo Group list. For instance, information such as the performance of specific modes under certain band conditions would be very useful information to share with the group.

For anyone interested in learning more about the FLAMP protocol/application, please refer to the quickstart documents at:
http://www.w1hkj.com/alpha/flamp/

Thanks for your support for paNBEMS and the NBEMS software. Please download and install the alphas and start up some regional HF or local VHF/UHF groups and you'll be sure to have some fun!

73!

-Dave, KB3FXI
paNBEMS

P.S. I'll take a good NBEMS test session over a rare DX contact any day!

5027. 30m today - 10.135 USB, 1500 Hz Center Waterfall

From: paNBEMS-owner@yahoogroups.com
Topic: 5027 Message: 5027

Hello all,

I suspect things will be hectic on 20, 40 and 80 due to the RTTY contest this weekend, so I'll be hanging around on 30m today at 10.135 USB, 1500 Hz Center Waterfall and I might hang out on 60m Channel 2 or 4 tonight.

Jump on and put out a call if you have a chance. I'll be monitoring for Olivia 8/500 on 30m up until about 6pm ET and then monitoring for phone/voice this evening on 60m (ch 4 primary/ch 2 if 4 is busy).

Hope to catch you on the air!

From: kc8yjj
Topic: 5028 Message: 5028

We just finished a demo with the director from Ohio County, WV. (Wheeling). Matt Koval (KA8YEZ) the EC, did a on the fly install, with in a couple minutes of voice configuration help, he was sending and receiving formatted messages via MT63 2K. The interesting part was Matt was cross banding with a HT to his truck in the parking lot, then through the repeater, all with acoustical coupling from his HT.

The director, Lou Vargo, wanted to see a ICS-203 report and how well it worked (amazing how fast your head goes blank when your trying to think of names). I finally got it filled out and sent, he was quite impressed!

One step at a time....

Gary - KC8YJJ

Great news, Gary.

I think what we need to do is what you just did... impress upon emergency management our capabilities with NBEMS. I think it would be great for the emergency management folks to call upon the hams to utilize NBEMS. Maybe that would encourage more folks to get on board.

Good work on the demo and thanks for the report!

BTW, I"m still monitoring 145.37 repeater (Tarrentum PA) today as well as 10.135 USB, 1500 Hz center waterfall, 30m.

Jump on either if you have a chance.

Topic: 5030 Message: 5031

Paul,

As of about 8:30am ET our spots on 80m and 40m are both clear. I wouldn't suspect we should have any problems on 80m at 10am but if 40m at 11am is busy with RTTY, we could wind up at 10.135 USB as our backup.

5032. FLAMP testing today 40m

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-09-30 17:21:06 UTC
From: KB3FXI
Topic: 5032 Message: 5032

Hello all,

Nice turn out on the paNBEMS nets today and we had 5 messages passed.

We did a little FLAMP testing after the net.

If anyone would like to jump on for some tests, I'll be monitoring 7.0725 USB, 1500 Hz center waterfall, 8/500 olivia until about 5pm.

If you're too far from my station in Pittsburgh and you'd like to sked a test today on 20m or 30m, just drop a line here on the list.

5033. Plain Language

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-09-30 18:03:09 UTC
From: KB3FXI
Topic: 5033 Message: 5033

Hello all,

paNBEMS has made it a habit of using plain language during our nets and limiting the use of Q-Codes to a very limited degree.

The following are the limited Q-Codes and radio-specific terminology we use in the course of the paNBEMS nets:

QRN - Natural/Atmospheric interference
QRM - Man made RF interference
QSB - Fading
QSY - Change of frequency
K - acknowledging/accepting calls from any stations
KN - accepting/requesting response from specifically designated stations
OUT - no reply or response is requested or expected

-Dave, KB3FXI
paNBEMS

Here is a Fema document on the subject of plain/common language for use in NIMS/ICS compliant emergency communications (radio or otherwise)

http://www.fema.gov/pdf/emergency/nims/plain_lang.pdf

NIMS AND USE OF PLAIN LANGUAGE

It is important that responders and incident managers use common terminology. There simply is little or no room for misunderstanding in an emergency situation.

The use of plain language in emergency response is matter of public safety, especially the safety of first responders and those affected by the incident. It is critical that all local responders, as well as those coming into the impacted area from other jurisdictions and other states as well as the federal government, know and utilize commonly established operational structures, terminology, policies and procedures.

This is what NIMS and the Incident Command System (ICS) are all about□achieving interoperability across agencies, jurisdictions and disciplines.

The use of common terminology is about the ability of area commanders, State and local EOC personnel, federal operational coordinators, and emergency responders to communicate clearly with each other and effectively coordinate response activities, no matter what the size, scope or complexity of the incident. The ability of responders from different jurisdictions and different disciplines to work together depends greatly on their ability to communicate with each other.

While the NIMS Integration Center does not require plain language for internal operations, it strongly encourages it, as it is important to practice everyday terminology and procedures that will need to be used in emergency incidents and disasters. NIMS

implementation is a long-term effort and it is probably not possible to persuade everyone to change ingrained habits overnight. But we do hope that over time, everyone will understand the important of using common terminology, that is, plain language, every day.

It is required that plain language be used for multi-agency, multi-jurisdiction and multi-discipline events, such as major disasters and exercises. Beginning FY 2006, federal preparedness grant funding is contingent on the use of plain language in incidents requiring assistance from responders from other agencies, jurisdictions, and functional disciplines.

The FY 2006 NIMS Implementation requirement to use plain language does not abolish the use of 10-codes in everyday department communications. Accordingly, the use of 10-codes in daily operations will not result in the loss of federal preparedness funds.

This alert replaces the one on 10-Codes issued on February 8, 2006.

5037. MT63 - long interleave setting

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-01 17:43:02 UTC
From: KB3FXI
Topic: 5037 Message: 5037

Hello all,

It's been quite a while since I've done any MT63 on FM but last night I checked into a local net on a UFH repeater NBEMS net.

The plan from the net control station was to start out with a few messages on MT63 2k long then move to some of the experimental high speed modes. Several stations, including mine, were getting negative copy on MT63. About 30 minutes into the net it dawned on me to check the settings on the MT63 modem and sure enough the long interleave setting was unchecked. Several other stations' had the same issue and once we all got set for long interleave all was well.

I've never run MT63 without long interleave so I'm guessing that somewhere along the line the default for new installs went to having the long interleave setting unchecked for MT63.

I put in a request to the NBEMS development team to set the default for future FLDIGI releases for MT63 for long interleave.

To check you settings, go to FLDIGI, Configure, Modems, then click on the MT63 tab. Make sure "64 bit long interleave" and "extended characters" are both checked, then click Save, then Close.

Thanks.

Message forward regarding FLDIGI standard release update. Download at:
http://w1hkj.com/download.html

We should be expecting updates on the alpha modes soon, too.

FLDIGI EXP - http://www.w1hkj.com/alpha/fldigi/v3.21/
FLMSG Alpha - http://www.w1hkj.com/alpha/flmsg/
FLAMP - http://www.w1hkj.com/alpha/flamp/

Prior to any testing make sure that all stations are running the current versions from the links above.

Recommended modes for HF testing (OpMode, exp PSK-Multi):
4xpsk63R, 220 WPM, 330 Hz
4xpsk125r, 330 WPM, 475 Hz
5xpsk125r, 440 WPA, 825 Hz

Bug reports can be sent to kb3fxi at yahoo dot com.

More info on the FLAMP protocol/application at:
http://www.w1hkj.com/alpha/flamp/

Version 3.21.53
- Maintenance release

Fix crash if no OSS mixer support(Linux issue)

Protect MixerOSS:: routines from trying to access uninitialized
tables, as
happens when no OSS mixer support is present. Specifically, if
openMixer()
or initMask() error out for whatever reason, then InputSourceNbr()
and other
routines will crash becasue num_rec and num_out never get set to zero.

Logbook Call width
* Base Freq / Call control width on width of string
"WW/WW8WWW/WW." vice
"99.99999"99
* needed for OS X - default fonts use very narrow digits

Log file update
* Write UTF-8 to log file
* Remove redundant code
- open log file in main.cxx
- also in function create_fl_digi_main_primary()

UTF-8 char echo
- fix echoing of UTF-8 characters in the Rx panel

Hamlib sideband menu
* Toggle initialize button when sideband menu selector changes

5040. FLMSG - Auto Send

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-04 00:26:37 UTC
From: David Kleber
Topic: 5040 Message: 5040

Hello all,

I'm getting reports from some stations that there are equal signs in my FLMSG messages resulting in checksum errors. This only occurs when I make the message in FLMSG, then do a wrap export then send by dragging and dropping the previously saved file into my FLDIGI tx window. The same stations report perfect copy with my FLMSG messages sent by using auto send in FLMSG.

I wonder if anyone else has experienced similar issues.

One thing I have noticed on some nets is that some folks will report 100% but I learned later that they clicked "ignor checksum error" and report 100% after the message opens and appears fine. When testing, please specify if there was a checksum error indicated.

For right now, it appears that using auto send is the best way to guarantee 100% for the receiving stations. I have always favored the drag and drop method as it allows us to send multiple messages in single transmission and also lets us add text before and/or after the FLMSG message in the same transmission.

I'll be sure to update the group here if any changes to the problem come across.

The latest Flamp 1.0.0AM has a great new feature,but I couldn't
figure it out at first.
If you miss receiving any blocks of a message you can request just those blocks be resent.
Ask for the specific blocks:ex 4,6,7. The sending station can either type the numbers in
the "blocks" window or copy and
paste them into the "blocks" window.
Be sure there is a comma after each block number except the last number.The missing blocks
show up in the window labeled "missing".
I hope this helpful to someone else.

CARAFest and 2012 Maryland State ARRL Convention this Sunday

Please join us at the Howard County Fair Grounds this Sunday for the CARAFest and our 2012 Maryland State ARRL Convention. Gates open to the public at 8 am and information may be found at the following link: < http://www.carafest.org/>. In addition to tailgating and vendors, there will be FREE license exams given by the Laurel Amateur Radio Club Volunteer Examiners beginning at 9 am.

The schedule for the 2012 Maryland State ARRL Convention and speakers is as follows:

9 am
The speaker from ARRL Headquarters will be their Assistant Emergency Manager Ken Bailey, K1FUG. Ken's presentation will discuss what ARRL does for emergency communications at HQ, then will describe popular digital modes used in emergency communications. While the League does not endorse any particular mode, he will discuss how N-BEMS can be used as a simple and inexpensive means of communicating during emergencies.

Welcome. The net usually uses Olivia 8/500. If you set up your software
to received an RSID, the software should automatically switch to the nmode
used by the net.

I will try it again net week. I didn't hear anything coming across on 80 Meters. I use a Yeasu FT-950 perhaps maybe I wasn't in the right mode on the radio or something. I will have to play with it again next time. Thanks.

Welcome aboard, Rick!

Thanks for giving us your quick introduction.

We'll look forward to having you aboard on the upcoming nets.

Let us know if you'll be giving NBEMS a shot. There are several features in the free NBEMS software that make formal messaging much easier and more efficient.

Please let us know if you will be trying NBEMS/FLDIGI/FLMSG. We'll be glad to help with the setup and setting on the air test schedules to test your station.

Thanks Dave,

I have installed it and utilized it. I like the FLDIGI . Very easy to use once you figure how to set it up. I was trying to see how it works on HF but I didn't hear anyone. Our section has been testing this and tried it out recently during the SET. I think it worked out better than planned. I plan on trying to get up to speed and be proficient using it. I look forward to checking in one of the nets. Thanks.

5055. NBEMS Updates Fw: [NBEMSham] fldigi-3.21.56

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-08 14:17:51 UTC
From: David Kleber
Topic: 5055 Message: 5055

Hello all,

There is a new standard maintenance release for FLDIGI on the NBEMS website available for download at:
http://www.w1hkj.com/download.html

We would recommend that any NBEMS users update to the new FLDIGI and FLMSG. Current standard release versions as of 10/08/12 are:
FLDIGI 3.21.56
FLMSG 1.1.27

To check your current version numbers, open the application, then click on help, then click on about.

After updating, make sure you have FLDIGI pointing to the current version of FLMSG by going to FLDIGI, Config, Misc, Find FLMSG. Here's a video for that configuration/setup:
http://youtu.be/psP489NOkg0

Updates are expected soon on the alpha version, too. For those interested in alpha testing of FLDIGI, FLMSG and FLAMP, downloads are available at:

http://www.w1hkj.com/alpha/fldigi/v3.21/

http://www.w1hkj.com/alpha/flmsg/

http://www.w1hkj.com/alpha/flamp/

The alpha vs change fast (there is a new FLAMP vs posted just this morning). Please check for new versions prior to any and all testing. Bug reports can be sent to me at kb3fxi at yahoo dot com.

For those new to the group who are interested in testing, but may not yet be familiar with FLAMP, here is the link to a PDF that explains the FLAMP (NBEMS vs of Amateur Multicast Protocol) application/protocol:
http://www.w1hkj.com/alpha/flamp/FlampQuickStart_AN.pdf

paNBEMS also has links to instructional youtube videos on various NBEMS subjects at:
http://groups.yahoo.com/group/paNBEMS/links

And we have some help sheets available at:
http://groups.yahoo.com/group/paNBEMS/files/

Please keep in mind that there may be some minor differences of the appearance of the programs in the help sheets and videos as the version releases change often, but the training materials should still be relevent and useful for basic setup.

During the day, we have been testing FLAMP and some of the high speed modes in the FLDIGI alpha on our paNBEMS 40m spot at 7.0725 USB, 1500 Hz center waterfall with Olivia 8/500 as

our call mode but we most often switch to one of the high speed modes in the current FLDIGI EXP alpha version.

Thanks!

Well, 3.21.55 did not have a very long shelf life. 3.21.56 is posted
and contains an important update for EMCOMM users.

ARQ rx/tx

* Added tx code to correct transfers of 8 bit ARQ data.
Needed to circumvent recent UTF-8 char support when
transferring data files.
* Added status bar notification when AMP extraction is
is being processed.
* Removed timeout on "Extracting FLAMP" and "Extracting FLMSG"
status messages.

Date: 2012-10-08 14:38:17 UTC
From: David Kleber
Topic: 5049 Message: 5056

Fantastic, Rick.

You, and all on the paNBEMS list, are free to post any test schedules you would like to make.

We usually use our regular paNBEMS spots for testing:
80m 3.583 USB

60m (channel 2) 5.3465 USB, with the alternative of 60m (channel 4) 5.3715 USB

40m 7.0725 USB
30m 10.135 USB

All spots are USB rig dial frequency and waterfall center at 1500 Hz with Olivia 8/500 for the initial call. On 60m, 1500 Hz center is mandatory and we can use mixed mode voice and data. so we either use Olivia 8/500 or phone/voice for the initial call.

To KB3FXI

Dave,

During the WPA SET WX3SKY was operating on 3583 with Olivia and MT63 and on 3983 LSB. As you copied some rather weak signals 100% I am curious as to how WX3SKY is able to operate so effectively with stations on 80 and 75 meters? Receive filters? Sufficient antenna separation?

My interest stems from problems I have when working 80 and 75 in a SET-type situation.

John,

I was out of town last weekend in Edinboro for my son's homecoming parade, so I wasn't at Skyview and didn't participate in the SET.

The station there has several options on 75/80m. There is a 160m resonant dipole up about 80', a fat dipole (40/80) up about 35' and a fan dipole for 40/80 at about 8' for NVIS. I would suspect the either used the 8' high cloud burner or the fat dipole.

Of course, the filtering really doesn't apply to the transmitting station, but they were most likely using one of the club's IC-756PROIII rigs, barefoot.

As for interference between 75m and 80m, I would guess that they would have had issues if 75m was transmitting at the same time 80m was trying to receive digital at the same time... and vice versa.

I experienced that problem when I worked the SET up there a few years ago.

BTW, the station at Skyview has very nice selectable bandpass filters which do a very good job at eliminating interference between the stations working on different bands.

5060. NBEMS ICS-213 to WL2K

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-09 19:22:01 UTC
From: w1ho_howard
Topic: 5060 Message: 5060

I'm dead-ended and wonder if anyone can shed some light on this.

For our SET, I need to send a test message in ICS-213 format from the EOC to a WL2K liaison station who will receive the ICS-213 and then send it via WL2K. We'd like to have the ICS-213 arrive at the liaison station in correct format to be able to attach it to a WL2K message so no transcribing is necessary.

I thought we could use flmsg to send it to the liaison station. However, I don't see any way to save the received ICS-213 in a way that it can be attached to the WL2K message in correct format.

Am I missing something, or is this not the way to accomplish the task, and if not, how might one do it?

Tnx es 73,

Howard W1HO

PS Sorry if you receive this more than once. I'm posting it to NBEMSham, paNBEMS and wl2kemcomm.

I was at the helm on 80 meters for the SET. You might be surprised to hear that the antenna in use for the entirety of the SET was an 80 meter NVIS (I.E an 80m dipole about 5 feet off the ground). While signal strengths were similar compared to a dipole up about 40 feet, the noise floor was much lower on the NVIS, making for a better SNR.

80 meter digital was the only station in operation on HF during the SET at Skyview. We decided that the mutual interference from running a 75 meter phone station was too great, so we moved the 75 meter phone station off site and used VHF phone to relay information between the two stations.

It worked extremely well.

Subject: [NBEMSham] Gwinnett ARES SET w/NBEMS

Dave (w1hkj) and gang,

Kudos to you guys for such a great suite of programs. This last Saturday, Gwinnett ARES participated in the annual SET and we made extensive use of NBEMS, specifically FLDigi and FLMsg.

This year, instead of mixing WL2K, Packet, and D$TAR we used NBEMS *exclusively*. We deployed many teams to various locations including public health, hospitals, fire stations, our EOC, CoolRay Field, etc. Like other ARES groups, we simulated a pandemic and routed traffic for various served agencies.

We used 3 nets on 3 FM repeaters: a resource (voice) net, a tactical (voice) net, and a digital (FLMsg) net. The FLMsg net used ICS-213 forms exclusively and we chose the tried-and-true MT63-2K modulation.

The organizers tried to overload our network, but using a voice net control on the digital net as our traffic cop avoided congestion and allowed us to maximize our throughput. At the peak, we were transmitting more than one ICS-213 per minute, which we considered excellent. Using MT63-2K and FM repeaters meant we did not have to retransmit any data, which aided in our throughput. From what I am told, our served agencies were quite impressed.

I almost forgot to mention we used FLDigi to pass digital traffic from our EOC on our state HF net using PSK31 too!

After this test, I am sure NBEMS is secured with our group as one of the best, if not the very best, digital tool in our Gwinnett ARES Swiss-army-knife of amateur radio tools.

Thanks to Dave Freese W1HKJ and his helpers for providing us with such a fine suite of programs. You guys have done a great job! I also have to thank John Davis WB4QDX our EC, Hal Collier W4IGE our AEC for training, and David Adcock KA4KKF our AEC for communications for excellent NBEMS training and for an excellent event. I think it is rare for such a

massive undertaking to come off without a hitch, and they pulled if off gracefully.

Thanks and 73,
Kyle Albritton

Geoffrey,

Your digital signal was excellent - loud and always 100% printing. Truly NVIS. This station is roughly 80 miles from Skyview so ground wave was not a factor. By the way, it was very helpful when you relayed traffic. Some of the stations were very weak to the point of some printing but not being discernable on the waterfall.

Use of a VHF link for widely separated 80 and 75 meter stations is very good approach. Next year!

Thanks for the info. 73 John, W3IW

Sent: Tuesday, October 9, 2012 9:37 PM
Subject: Sunday, Oct. 14 - All Day (Message Drill addition) - FLDIGI

KB5HPT will be monitoring 10,135 KHz (USB, +1.5 KHz offset, RSID on) using FLDIGI on Oct. 14, all day, accepting ICS-213 messages. Lew, KB5HPT will forward the ICS-213 formatted messages to me via WL2K.

On October 14, 2012, there will be a very simple message drill.

Send me a message in ICS-213 format. In the ICS-213 formatted message, provide the following information:

1. Your' Station Call Sign
2. Current Location (For example; Willard, NM)
3. Emergency Power availability (Simple Yes or No answer)
4. The VHF or UHF Repeater Call Sign & Frequency that you are currently monitoring or if you prefer, what simplex UHF or VHF frequency are you currently monitoring?
5. How are you notified of either an EAS, CMAS or Wireless Emergency Alert Message? (Commercial Broadcast Station, local EM, Weather Radio, cell phone, Spouse, local Club Repeater, telephone, etc.)

Send me an ICS-213 formatted message, with the above information, via WL2K, either on VHF or HF to W5WHN at Winlink dot ORG on October 14, 2012.

Those who do not have WL2K capability locate a nearby WL2K Station to transmit your message to.

Several NM County ARES Groups use FLDIGI (MT-63, Olivia, etc.)
for P2P on VHF & HF, then relay the messages to a WL2K
Station. Other NM County ARES/EMCOM Groups use a voice net and
funnel the messages to a nearby WL2K Station for relay. I
would encourage the use of either procedure to relay messages
on to their destinations. If you are unable to locate a WL2K
Station, email me the ICS-213 formatted message via the
Internet to W5WHN at ARRL dot NET.

We also have Stations who participate in our message drills from outside of the State of New Mexico. During an actual incident, we may need all of the help that we can muster from within and outside of the State.

Very simple, a message drill on Sunday, October 14 (all play, all day). Have some fun with this message drill,

73,

Jay, W5WHN

Hello all,

I just stumbled across the inexpensive shortwave receiver:
http://www.21st-century-goods.com/products/Kaito-KA-1102-World-Band-Shortwave-SSB-Portable-Radio.html

It's only $65, works on SSB, AM and FM, and has an external antenna jack.

I was thinking that this might be nice to have while traveling where you could pop a random wire antenna into the jack and run a pin jack cable from the headphone out to the mic input on a laptop or netbook to make a nice portable digital monitoring station.

I wonder if anyone on the list has ever worked with a setup like this with a cheap portable shortwave receiver?

Cool. I've been thinking it's kind of a waste to run my TS-2000 as a
JT65 receiver/reverse beacon. I'm going to pick one up.

Thanks and 73,

Sander W1SOP

Sander,

I would suspect that your Kenwood will blow away the receive capabilities of this little pocket radio, but let us know how it goes.

I wonder if you could do a test for us once you get it. I'd be interested to see how well it does with receiving, say on 40m, while you're transmitting at the same location on another band like 80m or 20m.

Let us know when you get it and we can arrange an SWL sked!

Dave,

No experience with the inexpensive SW but do have a tip.

I found my Netbook switching PS generated excess noise but only when the sound card ground was tied to the radio ground. As in a direct patch cable from the radio aux output to PC Mic input.
Battery power did not have the problem of excess noise. Did build an adapter for an old audio interface that I seldom use since the SignaLink. The isolation transformer worked FB and my ICOM R75 works very well as a second RX for digital modes.

Dave,

I would also hope the Kenwood would be better but who knows. Antennas
are important so perhaps it'll do OK on the big outdoor antenna.

That sounds like an interesting test but I'll need to put up a second
antenna for it.

Good tip, Larry.

Someone once told me that old computer modems are a good source for little isolation transformers.

I bought a few isolation transformers for building my own sound
interface cables before buying a microham USB-3. Looks like those
transformers will come in handy if I follow through with this experiment.

True. And I threw out a modem a few weeks before I realized I could have used those transformers. Doh! Luckily they aren't expensive. Still, salvaged electronics are so much more fun to use.

5074. What's a FLAMP?

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-11 22:22:48 UTC
From: KB3FXI
Topic: 5074 Message: 5074

Hello all,

Since we have a whole bunch of new members, I thought I'd do another explanation of FLAMP and also give some test results of testing between me and N3FLL today.

NBEMS FLAMP is an application that runs with FLDIGI. FLAMP is an NBEMS variation on the AMP (Amateur Multicast Protocol). The idea is to send a message, with a single uninterrupted transmission, wherein the message file is repeated several times. The message is also broken down into user selectable block sizes, such as 64 or 128 bytes.

The idea, which is proving to work very well, is to be able to use higher speed modes, which are more susceptible to short misses in text due to static crashes or other interference. By sending the same message 2, 3 or more times, the receiving stations have a better likelihood of receiving and assembling all the properly received message blocks. The FLAMP software then reconstructs the full message from the confirmed blocks then confirms 100% copy.

Even with the extra overhead of the checksum block code, the fact that the experimental modes are 6 times faster (or more) allows us to transfer larger files, in a shorter timeframe, and still confirm 100%.

Additionally, FLAMP now has the ability for receiving stations to request a retransmission of only the blocks that were missed. So, as Frank and I tested today, we can send an 11k file (which would take nearly a half an hour to send on MT63 1k), under moderate to good conditions, in about 4 minutes with FLAMP in one pass. Then, the receiving station, if they miss any blocks, can get a very quick fill on only the missed blocks in a few seconds, without the need for resending the entire message.

Why not just use FLARQ, you might ask. FLARQ is a one to one handshaking mode, just like packet, and does not allow for the ability to send to multiple stations. Also, FLARQ is quite a bit slower, as each transceiver has to switch off and on to allow for the handshaking exchange of data. Finally, FLARQ requires a sound card interface to handle the tx/rx cycles.

I would encourage folks here on the list to download and test with the FLAMP and the FLDIGI alphas. Please post your results here on the list.

Here's more info on FLAMP:
http://www.w1hkj.com/alpha/flamp/FlampQuickStart_A0.pdf

Alpha downloads at:
http://www.w1hkj.com/alpha/fldigi/v3.21/
http://www.w1hkj.com/alpha/flamp/

Please check for alpha updates immediately prior to testing and send detailed bug reports and success reports to kb3fxi at yahoo dot com.

-Dave, KB3FXI
paNBEMS

Here's some excerpts from my testing report to w1hkj and the alpha team from this afternoon:

#########

Hello all,

N3FLL and I had an amazing round of FLAMP testing today using 3.21.56EXP02 and FLAMP 1.0.0AO on 40m. Conditions were initially s4-s7 but improved to s7-s9, 599 by the end of our testing. 40m was quiet with little or no static crashes.

We tested the FLAMP function for specific block resends which worked perfectly. We started out on BPSK125 for some short tests which worked well with 2x repeat and we were getting 100% on the first pass, so we switched to 10xpsk63r with the same positive results. Then we moved to 5xPSK125R with excellent results. So, we figured, why not push the limit and tried 5xPSK250R. I wouldn't want to make a habit of running such a wide mode on HF, but this was truly amazing. N3FLL sent an 11k file (which would have taking almost 30 minutes on MT63 1k long) in 4 minutes with base 256, 128 block size with a single pass. I got 100%... absolutely amazing mode. 5xPSK125R also continues to amaze us.

Files were sent with block sizes 64 and 128 and base128 and 256 both worked perfectly.

I really think the combination of FLAMP and the EXP high speed modes is going to take us to the next level. I would have never even considered sending an 11k file on HF before the test we did today.

Hello all,

I would greatly appreciate it if someone could pick up the nets for this Sunday. I will be out of town for a family event.

Please pitch in and help out.,, I can't do it all myself.

Thanks.

-Dave, KB3FXI

paNBEMS weekly HF Net starts at 10:00 AM ET time every Sunday morning with Net Control call on 3.583 MHz USB using 8/500 Olivia, 1500 Hz center waterfall frequency. At approximately 11am ET we switch to 7.0725 USB, Olivia 8/500, 1500 Hz center waterfall, for a retransmission of our weekly bulletin followed by propagation testing and a call for additional stations.

I will try to take the net on Sunday, if no one else wants to be the NCS. Last Sunday, I intended to take the net, but my computer went bonkers, and I spent the morning erasing the entire disk, reinstalling Lion and reloading the software and apps. Then the sound card acted funny, and I now have a new sound card, which I hope will do the job. I have run the net before, and I hope that someone else will step up to be NCS this Sunday to get the experience.

5080. transmit word wrap setting

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-15 02:11:35 UTC
From: jvilardo2000
Topic: 5080 Message: 5080

This may sound very basic but I cant find how to change the length of a line of type before a carriage return is sent. Say I want only 36 leters or spaces on a line in the transmit window is there away to set a value for this or do I have to manually enter the CR.

Thanks,

Joe K3JV

Joe,

I do not believe that FLDIGI or FLMSG has the ability to set the character length for word wrap.

FLAMP allows us to send plain text files which you could set the word wrap for with your text editor.

I saw your post with the same question on NBEMSham. Maybe either someone here or on NBEMSham can give some better insight.

Is there any certain instances where it might be important to set a shorter word wrap? Perhaps if you could make the case, the developers could look into adding this capability.

Dave
It is more an operating convenience. When keyboarding it is easier to read shorter lines and also to send shorter lines without having to insert a manual CR. I have no idea of how difficult it is to make that change in the software; if its a big deal then forget it, if it’s an easy fix then I for one would like to see it. I could be the only one that is bugged by not be able to select shorter line length’s. Perhaps we will get some feed back of what others think.

5084. DominoX "lock in"

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-15 18:20:09 UTC
From: exdakotakid
Topic: 5084 Message: 5084

Hi Dave et al;

First off- thanks for sharing all the info on your NBEMS work via the PA-NBEMS group. We have been running an HF NBEMS net here in WA for about a year now and are still struggling with setting standard modes. I really like DominoX for the keyboarding but we have noticed that there tends to be a loss of decoding the first characters (as many as 20+)of a transmission. Once there is a "lock", the balance of copy is 100%. In our experimentation it seems that stations tend to miss the beginning of stronger closer station transmissions, while the more distant receivers copy 100%. I was wondering if you have seen this phenomenon and found a way to deal with it. About all we can do is make sure that each transmission starts with some "throw away" preamble. We have tried both TXID/RXID on/off, Squelch (FLDIGI)open/closed, but have not found success across the board for all stations. Note we have also tried both Domx 11 and 22. There is less loss with 11, probably since it seems related to the time it takes to get a lock on the decoding.

Thanks & 73

Brian (KNØN)

5085. Re: [paNBEMS] DominoX "lock in"

From: David Kleber
Topic: 5084 Message: 5085

Brian,

Thanks for posting the question here.

We experimented with DominoEX many years ago and found it to be a great mode, but for our keyboard portions of our paNBEMS nets (check ins and comments) we settled on Olivia.

I'm not an expert on DominoEX but I think that it has a kind of built in AFC (automatic frequency control) that allows for a little more slop on +/- frequency offsets as compared to MFSK16, for example. I suspect that some of your ops might be slightly off on their spot on the waterfall or maybe they're in need of a sound card calibration. My guess is that the DominoEX mode is taking a little bit of time to fine tune to the offsets and leading to your loss of text at the beginning of the messages.

If you're using the docked scope feature of NBEMS (go to view, waterfall and check docked scope and you will see the scope appear at the bottom right corner of the FLDIGI screen), you might notice that the stations you're missing the beginning text from will show as a more rounded signature or off center in the docked scope view. I DominoEX signal that is dead on should show in the docked scope as a perfect inverted V.

Maybe we have some DominoEX experts on the list here who might be able to shine some more light on the issue you described.

Olivia is very forgiving on the frequency spot. In fact, I think you can be +/- 125 hz and still pull out perfect copy.

On the subject of the keyboard modes for check ins and comments, I'm considering trying Contestia 16/500 as a test for
some of our upcoming nets. The advantage with Contestia is that, according to some ops, it does slightly better than the Olivia equivalent but it's twice as fast. The drawback is that Contestia is all caps and no extended characters, so it can not be used with FLMSG because of an incompatibility issue with the checksum feature.

I hope this helps and please keep us up to date with the progress you make on your nets. Please drop us an occasional report.

5088. Default (native) sample rate

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-16 00:45:40 UTC
From: KB3FXI
Topic: 5088 Message: 5088

Hello all,

We ran into an issue today on olivia with garbled characters under good conditions. After doing a little on the air troubleshooting, I found that the other station was set to 11025 sample rate. After getting switched to the default sample rate, all stations were 100%.

Here is a comment from w1hkj on this subject:

##########

Please to all who read this ... Always ... always ... always set your
sound card sample to "Native" unless you have a technically sound reason for doing otherwise. Technically sound means that you fully understand what resampling does and how to use it properly.

73, Dave, W1HKJ
##########

FLDIGI has the ability to discover your sound card default sample rate. Go to FLDIGI, Help, and click on "Audio Device Info". Take note of the default/native sample rate for your sound card. Then go to Configure, Sound Card and click on the settings tab. Make sure that both capture and playback are set to the "Native" rate (in most cases, this would be 44100).

My youtube video on CheckSr sound card calibration shows the procedure for finding your default sample rate at the beginning of the video:

5089. 30 Meter Multi Mode Weekend 27/28 October

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-16 01:39:12 UTC
From: KB3FXI
Topic: 5089 Message: 5089

Here's a forward from eHam.net on what could be a fun event:
http://www.eham.net/ehamforum/smf/index.php/topic,85806.0.html

30 Meter Multi Mode Weekend 27/28 October
« on: October 13, 2012, 08:36:09 AM »

30 Meter Multi Mode Weekend

When: October 27th and 28th 2012

Where: 10 MHz - 30 Meter Band (10.100 ☐ 10.150)

Objective: To promote experimenting and using different digital modes on the unique 30 Meter Band.

Those of you who want to participate using the more common modes of CW, BPSK31, RTTY, we welcome that, but those wanting to try other less used modes please do so and turn your RSID on to help others know what mode you are transmitting (common modes i.e. BPSK31/RTTY no need for RSID, do use RSID on the less common/exotic modes i.e. QBSK/HELL/MSK/DOMINOEX/THOR/THROB/CONTESTIA/OLIVIA/ECT).

A number of digital mode groups will be participating this weekend so if you have wanted to try out a new digital mode or make some contacts using less common digital modes this weekend might be of interest to you. There are a number of multi-mode digital software programs so this is also a chance to get on the 30 Meter Band to try them out. Most of them have RSID/TXID (Reed Solomon Identifier- automatic mode detection and tuning).

This event is NOT a contest no set times no rules no exchanges no winners other than those that participate with casual use of the 30 Meter Band knowing that others with like interests will be on this weekend to experiment, ragchew, DX and have some fun trying different digital modes!

Where on the 30 Meter Band to find different digital mode activity:
(Note: these are suggested only and observations of known digital mode activity)

http://homepage.ntlworld.com/wadei/30m_band_utilization.htm
(For a very detailed 30m Band chart please go to the 30m Band Utilization Chart ☐ Provided by Ian G3NRW)

10.100 ☐ 10.130 CW
10.132 ☐ SSTV-Narrow (MP73-N) Region 2
10.135 ☐ 10.138 ☐ FeldHELL
10.1386 ☐ MEPT/WSPR
10.138-10.140 ☐ JT65 (WSJT)
10.1405 ☐ PROPNET & PropNet Robots (BPSK31)
10.139-10.141 WSPR (QSO MODE-WSJT)
10.140 ☐ 10.141 BPSK31 QRP
10.140 ☐ 10.142 BPSK31 ☐ DX Region 1,2,3 (or BPSK/QPSK,31,63,125,<125hz)
10.142 ☐ 10.145 RTTY,MFSK,THOR,THROB,DOMINO,OLIVIA,CONTESTIA,etc.

10.144 ☐ 10.145 ROS (Region 2 ☐note not legal in USA)
10.144 ☐ FeldHELL (Region 1)
10.144 ☐ SSTV-Narrow (MP73-N) Region 1
10.142 ☐ 10.144 ☐ ALE-400hz
10.145 ☐ 10.148 ☐ ALE-2khz
10.147 ☐ 10.148 PSKMail/APRS
10.1491 ☐ 10.1495 APRS

Operating hints for the weekend:
- Do use RSID (RXID/TXID) for the less common/exotic modes (i.e. Contestia,Olivia,Domino,etc)
- Do CQ with RSID for more than just a few of CQ's, don't expect to have someone to reply on a less common used mode the first few CQ's give it a while for others to find you and the mode being used
- Do use good operating habits ☐ clean signal, lowest wattage to complete the QSO, QRL in common mode first, if band is busy or crowded spread out or use narrower width modes (i.e. if band is busy don't use OLIVIA 8/500 in the middle of the 30 Meter PSK 10.141 portion of the Band-not good operating habit if the band is busy and you will not make many friends)
- Do have fun and compare modes, wattage, antennas, etc with other operators that are interested to do the same..most the 30 Meter Digital Operators are not Call,599,73 most want a QSO (even DX)
- Do use http://www.HamSpots.net for spotting, announcements of mode, etc.
- Do use the other digital ops with more experience most seasoned digital ops on 30 Meters are very helpful and will have the patience to help if needed also might use and log on to HamSpots (link below)

Some reference links (only a few, there are many more modes/links):

If RSID is not being use please reference this link from FLDIGI on the Sight & Sounds of different digital modes that might help you determine what mode is being heard/seen on your waterfall:

5090. Sample Rate - technical explanation from w1hkj

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-16 02:44:05 UTC
From: KB3FXI
Topic: 5090 Message: 5090

For the DSP engineers on the list...

For all who have an interest in the details surrounding fldigi's resampling (and why it is done) I offer some reading:

Topic
URL to visit
Resampler used in fldigi
http://www.mega-nerd.com/SRC/index.html
A layman's view of audio resampling
http://www.ask.com/wiki/Sample_rate_conversion?o=4309&qsrc=999
Resampling theory
http://www.utdallas.edu/~cpb021000/EE%204361/Great%20DSP%20Papers/resampling%20paper.pdf
Intro to Digital Resampling
http://www.rfel.com/Files/Documents/W11013_Resampling_white_paper.pdf
Resampling algorithms work best when the ratio between the original sample rate and the desired sample rate is an integer value. For most of the digital modems the "natural" sample rate of the modem decoders that sample rate is 8000 samples per second. Some modem types are related to 11025 samples per second. Whether a modem is related to 8000, 11025, or some other sample rate is determined by the periodicity of the symbols representing the data. The following modem types are related to 11025. All others are related to 8000. The reason is purely historic. Early 16 bit sound cards nearly universally had 8000 sample per second analog to digital / digital to analog converters.

DOMINOEX-5
DOMINOEX-11
DOMINOEX-22
THOR-5
THOR-11
THOR-22
THOR-22Q MFSK-11
MFSK-22

It's easy to see that there are a far greater number of modem types that are integrally related to 8000 and multiples thereof. That means a sound card whose native or natural sample rate is 48000, 96000 etc is a better choice for most modem encoding/decoding. Down conversion (48000 ==> 8000) is simply a matter of decimation (dropping samples) in time. If your sound card has a natural sample rate of 44100 then it works really well for the above modem types since 11025 has a 1:4 relationship to 44100. Fldigi uses very sophisticated algorithms for performing sample rate conversions. If your computer's cpu is up to effort the s/n of the resampled data is effected by less than -100 dB. That is, it only adds about -100 dB to the noise level of the signal.

The same cannot be said for any resampling that might be imposed by the wrong choice of sampling rate at the sound card (or it's OS driver). Let's say that your sound card has a native sampling rate of 44100 and you force it to behave as if it were 8000. The driver

code may use simple linear interpolation between the original samples. That type of resampling can produce an effective increase in noise of many dB ... lousy copy of the incoming signal. Ditto on the transmitted signal.

Most sound card / drivers report the native sampling rate when queried by an application. Fldigi does this and shows the native or natural sampling rate in it's sample rate selection combo on the sound card configuration dialog. By the way, the natural sample rate of the codec is determined by the h/w clock and divider chain that is used to trigger the analog to digital conversion. On a very high end card (think big bucks) the clock / divider chain can be adjusted via software to provide a choice of sample rates. On cheap sound card h/w (think mother board systems) this does not exist and the OS driver is used to provide the resampling. You are almost always better off using the fldigi resampling algorithms and NOT the OS driver software.

I will be happy to answer generic questions, but I do not have a broad knowledge of the various sound card hardware.

73, Dave

5091. 10/16/12 FLAMP alpha test report

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-16 17:27:30 UTC
From: KB3FXI
Topic: 5091 Message: 5091

Hello all,

Special thanks to Frank, N3FLL, who has been pitching in with a lot of FLAMP and high speed alpha mode testing with me on 7.0725 USB.

We just finished up a really good test session a little while ago.

My report to the alpha team is below. I'll be sure to keep paNBEMS up to date on any possible final release dates.

In the meantime, all are welcome to join in on testing:

Here's the links if you're interested in testing the alpha's:

Explanation of FLAMP:
http://www.w1hkj.com/alpha/flamp/FlampQuickStart_A0.pdf

FLDIGI:
http://www.w1hkj.com/alpha/fldigi/v3.21/

FLMSG:
http://www.w1hkj.com/alpha/flmsg/

FLAMP:
http://www.w1hkj.com/alpha/flamp/

The standard release versions of the NBEMS programs are at:
http://www.w1hkj.com/download.html

We ask that you check these links prior to any alpha testing because the versions can change pretty rapidly and we always want to ensure that we are testing with the most up to date releases.

-Dave, KB3FXI
paNBEMS

####################

Hello again all,

Another great round of testing today on 40m. The band was very quiet with moderate signal strength between me and N3FLL with a little bit of fading, but virtually no static crashes/qrn.

We tested FLAMP with 4x, 5x and 10xPSK125R with fantastic results. Must stunning was a 3.5k file that I sent with 2x repeat, 128 block size and base 256 on 10xPSK125R. Transmit time, even with 2 passes, was 49 seconds! Wow that's a fast mode, and it performed very well in the qrn free cond's. According to the calculator in FLAMP, that would have taken almost 5 minutes on a single pass with MT63 1k long.

I'm looking forward to testing 10xPSK125R on FM where I won't have to feel guilty about the 2k bandwidth.

FLAMP continues to perform flawlessly and as I said in my last report, the "report" button is a great feature.

Are we getting ready for prime-time with a standard release?

-Dave, KB3FXI

5092. Flamp on Local Repeater

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-16 22:54:55 UTC
From: frankrocap
Topic: 5092 Message: 5092

After good sessions of testing Flamp and some higher speed modes on 70725 with Dave KB3FXI over the last several days I had the opportunity to try some very hi-speed modes on our local repeater (W3EOC) with
N3MXB, K3EUI and W3HOA. We gradually increased speeds until we were up
to 7xPSK250R. We had 100% success in all our test transmissions.Of course the signal was excellent but we wondered just how wide a signal we could pass through the repeater. K3EUI was using "acoustic: coupling and the other Stations and myself were using Signalink.
The only problem I encountered was the need to restart Fldigi so that the scroll function was restored.

73,
Frank N3FLL

Very interesting. I would think that ARQ based modes would excel with the aid of a repeater.

5094. Testing today (Oct 17, 2012) on 7.0725 USB or 14.0645 USB

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-17 14:40:03 UTC
From: KB3FXI
Topic: 5094 Message: 5094

Hello all,

If anyone is interested in NBEMS alpha testing, I'll be available most of the day on 7.0725 USB from Pittsburgh, PA.

If anyone is further out from my area, and you would like to try 20m, just drop a line here or to kb3fxi at yahoo dot com, and we can make a schedule.

At Noon ET/1600z on 7.0725 USB, 1500 Hz waterfall center and
2pm ET/1800z on 14.0645 USB, 1500 Hz center waterfall,
I am going to transmit a short FLAMP message with PSK125R. To try to copy the message, all you need to do is be on PSKR/PSK-125R (not to be confused with PSK/BPSK125) with FLDIGI 3.21.56EXP02 and have FLAMP 1.0.0AR running.

Please post your reception reports here on the list and try to meet me on the air. Aside from the 20m 2pm ET FLAMP transmission, I will be primarily monitoring 7.0725 USB.

-Dave, KB3FXI

I'm all set up- and running for the FLAMP test as of 1538Z (1139EDT) in Gettysburg, PA on 7.0725 USB. We'll see how it goes. I may not be at my station keyboard if I get tied up, but I'm monitoring.

Ok, Mike.

Did you get any text in your FLDIGI receive window?

PSK125R is pretty picky on waterfall spot tuning. If you weren't dead on 7.0725 USB, 1500 Hz center, you may have just missed the text.

Dave,

Not copying NY3J very well. Fading is bad on both of you but you are strong enough to provide 100% copy. Very interesting mode!

Ok, Mike.

Did you get any text in your FLDIGI receive window?

PSK125R is pretty picky on waterfall spot tuning. If you weren't dead on 7.0725 USB, 1500 Hz center, you may have just missed the text.

Dave,

At 13:17L your flamp message to NY3J 100% with PSK125RC5. Sorry not to get on the air. RF problems in the shack that lock up fldigi. RX until I can track down the problem.

I'm all set up- and running for the FLAMP test as of 1538Z (1139EDT) in Gettysburg, PA on 7.0725 USB. We'll see how it goes. I may not be at my station keyboard if I get tied up, but I'm monitoring.

On Wed, Oct 17, 2012 at 10:40 AM, KB3FXI <dave.kleber@...> wrote:

Hello all,

If anyone is interested in NBEMS alpha testing, I'll be available most of the day on 7.0725 USB from Pittsburgh, PA.

If anyone is further out from my area, and you would like to try 20m, just drop a line here or to kb3fxi at yahoo dot com, and we can make a schedule.

At Noon ET/1600z on 7.0725 USB, 1500 Hz waterfall center and
2pm ET/1800z on 14.0645 USB, 1500 Hz center waterfall,
I am going to transmit a short FLAMP message with PSK125R. To try to copy the message, all you need to do is be on PSKR/PSK-125R (not to be confused with PSK/BPSK125) with FLDIGI 3.21.56EXP02 and have FLAMP 1.0.0AR running.

Please post your reception reports here on the list and try to meet me on the air. Aside from the 20m 2pm ET FLAMP transmission, I will be primarily monitoring 7.0725 USB.

Dave,

Can copy (~25%) when you are using Olivia but nothing on the faster
modes. Really 'ghost reception' as mostly do not even hear the sound
other than static. Conditions this time of day are almost never great on
40 meters, still you are doing well considering.
Will continue to copy and have FLAMP running.

Ok, Larry... you are about 774 miles from my location. We just had a great test with a station about 260 miles from my station in the Philly area.

I'll be doing the test on 14.0645 USB, 1500 Hz center waterfall, PSK125R at 2pm ET. Maybe we'll have better luck there.

Also, I plan on heading to the wx3sky club station and should be on the air by about 3pm ET or so. Let me know if you'd like to try to make a 20m sked later... maybe around 4pm ET?

Yes, text came in well in FLDIGI, I saw all of the text and how it was being transmitted by you in encapsulated blocks. I don't believe it was 100% copy, but the syntax of the encapsulation is a little unfamiliar to me yet. Would I have seen text if I was slightly off waterfall frequencies? Take a look at the attached. It looks pretty close.

It does not look like I really had to do anything with FLAMP aside from have it running (it was). I'll try to copy some other transmissions from you as I can (I'm supposed to be working...). I cannot make the 2PM.

Do I have to tell/configure FLDIGI about FLAMP? I did not see anything in the menu but maybe I missed something.

Ok, Guy.

And for anyone else following the messages here, I'll be heading up to wx3sky club station and should be on the air by about 3pm ET monitoring both 7.0725 and 14.0645 USB.

I'll put out another FLAMP test with PSKR/PSK-125R at 4pm ET on 14.0645 USB, 1500 Hz center waterfall.

Dave,

I left the rig on 140645 (1500) and PSK125R from 15:00L until now - 16:45L. Roughly 50% copy with a 20 meter J-Pole. WX3SKY is roughly 65 miles. Results were actually good on 40 earlier this afternoon with 100% copy on your transmissions with FLAMP. There was some fading but otherwise you were S8 to S9+.

Hi Dave,

Thanks for the Flamp test today. It was a lot of fun.

I think I remember you saying in a previous message that there was a bug in the way the screen scrolls in Fldigi. I noticed that I had to keep manually scolling down to read the incoming messages.

Hello all,

This version of FLAMP had additional automation which should make it easier for missing block requests and transmissions.

FLAMP is really starting to shape up into an extremely powerful new tool when combined with some of experimental high speed modes.

I hope to be testing this on 7.0725 USB today.

Subject: 30M Multi Mode Weekend Oct 27/28 – Let's Celebrate 30MDG 5yrs, 6,000 members, 31,000 Award Certificates issued

Hello 30MDG member,

Let's celebrate 30MDG 5 year Anniversary, 6,000 members and our 30MDG Awards program by promoting a weekend of 30 Meter Activity! We have a great group of digital ops on 30 Meters so why not meet up, experiment, rag chew with other members or non-members, DX and promote the 30 Meter Band – it's a very unique and a great Band.

This email is a direct email to you since you are a 30MDG member and ALL of our almost 6,000 members will be receiving this same email/invite so we hope to have some good participation and activity on the 30 Meter Band this weekend.

Hope to see you on the 30 Meter Band the weekend of October 27/28 so if you have a few hours or want to play all day or night let's get on the Band and have some fun! GL and as normal this is NOT a contest – no start stop times, no exchanges, no logs to send to anyone, no winners or trophy – this IS to PROMOTE awareness of the 30 METER BAND and the only winners are those that participate and have fun!

---
30 Meter Multi Mode Weekend

When: October 27th and 28th 2012

Where: 10 MHz - 30 Meter Band (10.100 – 10.150)

Objective: To promote experimenting and using different digital modes on the unique 30 Meter Band.

For a more detailed listing of this event go here:
http://30mdg.net/news.html
(You are welcome to post this event information to your other digital friends, clubs, yahoo groups, websites, etc – please DO help us promote this event - the more that participate the more fun for all)

GL and CU on the 30 Meter Band
Don KB9UMT 30MDG#0001 Founder/Award Manager
And the 30MDG "Team"

Hello all,

N3FLL and I identified a bug in FLAMP 1.0.0AS.

w1hk found the fix and just posted FLAMP 1.0.0AT.

We're having fun with the alpha testing and the changes can come pretty fast, as you can see.

Please help out with the testing if you can. Report any bugs or questions you have to kb3fxi at yahoo dot com.

Thanks.

All,

My OmniV has xtal mixers for each band and upper and lower sideband and a synthesized vfo so my vfo, band mixer xtal or sideband xtal can be off a little.

I am usually about 50 hz high but you can check your rx by tuning in one of the WWV transmissions. I can only get 10 mhz or 30 mHz because I have on 500 kHz bands.

Start fldigi, tune to one of the WWV frequencies, set the wf to 1000 Hz and using either upper or lower sideband change the freq dial until the beat note is on the 1kHz marker and your frequency dial should read the WWV freq plus 1 KHz or minus 1 kHz depending on using upper or lower sideband.

Those of you with all syn radios will probably have the same error regardless of band because they probably use the same syn for the mixer oscillators, but I don’t know that and I imagine that most will read within 20 hz.

Notice where the sound card setting in ppm is and then set it to zero.

When the tone is on say 1 kHz you can set the sound card rx calib to 50000 and the frequency will move 50 Hz on the water fall, –50000 will move the tone 50 hz lower. Makes sense, 50000 parts per million is 50 hz.

Just a way to see how the sound card osc works and then you can set the sound card back to what I was.

When 10 meters is open I can use the 30 mHz WWV signal but I think they are on 5, 10, 15, 20, 25 and 30 mhz so if your radio is general coverage rx then you can check your radio calibration easily.

Just a quick way to check your rx calib.

Latest update on FLAMP.

I'll be on 7.0725 USB, 1500 Hz center waterfall, 8/500 Olivia most of the weekend for testing.

Please get the latest Alphas at:
http://www.w1hkj.com/alpha/fldigi/v3.21/
http://www.w1hkj.com/alpha/flamp/

And jump on for some testing if you can.

Subject: flamp-1.0.0AU posted

http://www.w1hkj.com/alpha/flamp/

Fixed stream parsing problems for both very small and very large block sizes. I've tested from 16 to 2048 block size with no parsing errors.

Changing block size failed to clear the repeat block control ... corrected that oversight.

Hello all,

I got word from KB8HTU that the 2m 145.51 Argent simplex repeater is back in service near West Point, OH.

I just did a test with FLDIGI 3.21.56EXP02 and FLAMP 1.0.0AU (the gold vs of FLAMP?).

I did acoustic coupling with my very old TM261A 2m rig, with the hand mic to the computer speaker, and cheap plug in mic next to the radio receive speaker. First mode was 10xPSK125R. FLAMP was set for 128 block size, plain text and 2x repeat with a 1.3K file and transmission time of 50 seconds.

The first pass got all but the last (11th) block. The second pass provided the fill on block 11.

Next I tried 16xPSK125R for the first time. Missed block 2 and 11 and got the fill on both on the second pass. Transmission time 32 seconds! Very impressive, and, BTW, the FLMSG calculator puts the same text in a blank message format at 1 minute and 8 seconds.

I just transmitted then copied the simplex repeater playback from the repeater... pretty darn cool.

We're looking forward to doing some more testing on the 2m simplex repeater.

Glad to hear it's back and to get your report. After my backyard testing with the fast modes we're going to take it to a hill and do some "serious" testing. I did check with Argent and the memory upgrade (factory) is currently $15 plus shipping. The memory chips are two SOICs. My unit will go out after the field testing which we'll hopefully run over the next two weeks or so.

Dave and I just did a quick test using PSK 16X125R. One weather report sent with flamp. File was 11 blocks. I missed the third block on the first pass, but picket it up on the seconds. All worked well. Dave and I are 42 miles apart, so says QRZ.

I found that the Rx level at the repeater was a bit critical. More so than for voice but not too difficult to adjust. I went from missing one or two blocks 1st time to perfect 1x copy with the PSKR modes. In the case of EasyPal, once I got it optimal for fldigi I went from no copy (maybe 10% of blocks) to perfect.

I was surprised it worked so well.

Good luck with the demo, Frank.

Please give us a report here on how it goes.

Frank,

I gave a demo just a few weeks ago, using two ht's running extra low power and two computers.

Set up xmt rig with audio coupling, and the receiving rig with ht spkr out to computer line (or mic) in. Didn't use audio coupling on the receiving rig, as the rigs were only a foot apart, so didn't want receiving computer mic picking up xmt computer speakers.

I explained what was going on, and demo'd Flmsg with a csv file and a few other files, opening up Flmsg on the receiving end, along with a browser window.

It was well received, and we had 4 new NBEMS ops in the first SET a week later. We'll have a second SET (the REAL one) in Nov. The first one was intended to get ops up on WL2K and practice sending email via WL2K.

In our county, we used voice, NBEMS and WL2K. The messages were originated by voice to a station who received them and transcribed them to ICS213 in NBEMS. That op then sent the messages to another who attached the messages to WL2K emails.

Worked well and we enjoyed it.
73,
Howard W1HO

Frank,

In my response to you, I missed the "one room to another". You could easily use audio coupling on both ends if the setups won't be able to hear the other computer's speakers.

>
>I can verify this assertion, since I've used this interface to record (and play back!) musical instruments in the past by attaching it to an external mixer (also Behringer but that's a consequence of low budget rather than a requirement). This is a no-frills 2 channel USB record and playback interface that does not use or require any audio hardware inside the computer and which uses the standard USB sound profile so should be supported by any modern OS without an additional driver (it is certainly supported by both MacOS and Linux). Indeed, the computer I had it attached to did not even have a sound card in it (this was back in the days before on-board sound chips) so it definitely doesn't use the internal sound hardware in any way. And I can validate that it does do a clearer job than inboard sound chips, due to the separation of the sound processor from the electronically noisy environment of the insides of a computer (which always got weird noise artifacts in my recordings). It has two RCA jacks for input, two RCA jacks for output, and a USB plug. That's it. Pretty much what you want.

Hello all,

I would suppose we have quite a few folks on the list here that are also active on Linkedin.

For those who are not familiar with Linkedin, it's like a business version of facebook where individuals and companies can exchange information and make contacts and introductions. Linkedin also has groups on specific subjects, including amateur radio, which are great places to share/promote ideas and projects.

I am connected to quite a few hams on Linkedin and would like to invite any and all to connect to each other there and to explore some of the different groups available.

I have been in job search mode all summer, and I'm working on building up my contacts and endorsements and recommendations. Please do me a favor and connect with me and/or endorse any of my listed skills in my profile at:
http://www.linkedin.com/in/davekleber

Here are some Linkedin group that might be of interest to those here on the paNBEMS list:

http://www.linkedin.com/groups/Amateur-Radio-Enthusiast-132363
http://www.linkedin.com/groups?gid=2095889
http://www.linkedin.com/groups/Salvation-Army-Emergency-Disaster-Services-1844888
http://www.linkedin.com/groups?gid=60246

Thanks.

5130. FLAMP Update - 1.0.0AV

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-22 21:28:23 UTC
From: KB3FXI
Topic: 5130 Message: 5130

Hello all,

FLAMP alpha was just released today:
http://www.w1hkj.com/alpha/flamp/

For testing, you need the current FLDIGI alpha at:
http://www.w1hkj.com/alpha/fldigi/v3.21/

The new FLAMP version has a configure tab that allows for the selection of controls for switching on or off automatic mode change between FLAMP and FLDIGI.

There may be some other bug fixes in FLAMP 1.0.0AV as well.

If you're helping with the alpha testing, please make sure you are checking the links above so that you are always testing with the most current versions.

There should be a new FLAMP quick start guide soon at:
http://www.w1hkj.com/alpha/flamp/

Thanks again to all those who are helping out with the alpha testing. We're having fun and providing a lot of good feedback to w1hkj.

My FT897 runs through a AT897 tuner,there is a IN/OUT for the control cable.

I removed them and put them back in and good again, I am wondering if in my unhooking and attempt to hook up I was in the opposite plug until I removed them?

Guess I will never know now, but back up and running again.

Subject: Trouble seeing rig

Ok not sure what I done or why it is happening. I have done all the usual things for FLDIGI to the rig after it has been unplugged but still no joy..

Took laptop with me and FT857 to JOTA this weekend.

Also used FT-817 and had issues with it seeing the program.

Anyway, I hooked netbook up, updated FLDIGI after removing older version and tried setting up the CAT controls in HamLib and the radio has no control via FLDIGI, radio will XT through Signalink ok, but frequencies will not change .

Running Belkin Serial to USB like I have and Windows 7.

So I think I figured out why Flamp did not work. I was running Fldigi 3.22.0CB, and I think I was supposed to have been on Fldigi 3.21.58EXP01.

Can I have both on the machine as long as I don't run them at the same time?

Ok, Mike.

The FLDIGI 3.22 alphas have a 1200 Baud packet modem. I think w1hkj whipped that one up as a special version for someone.

I don't think having both on the computer should cause any problems but I have gotten into the habit of uninstalling all my old versions and removing any DLL files and folders before installing the new versions.

Maybe we'll catch you on the air again soon. I'll pretty much always monitoring 7.0725 USB during the day.

http://www.w1hkj.com/alpha/fldigi/v3.21/

http://www.w1hkj.com/alpha/flamp/

fldigi - improved multi burst RsID detection. You will notice a longer blank period between the first and second bursts. This is needed to disallow trailing and leading tones from being treated as being in a single tone sequence.

flamp - corrected problem with MS carriage return (0x0D) characters forcing base encoding of MS text files. Quick Start guide updated to AV/AX compatibility:

Ok Gary and all,

I'd recommend uninstalling the older versions of FLAMP and FLDIGI alpha before loading the new versions. Make sure you go into the old file folders and delete any dll's then delete the folder.

Also, tuning spot on the waterfall and sound card calibration are a bit more critical with some of the high speed modes. Hot audio levels are also more critical.

N3FLL and I had 100% success on 3xPSK250R with a flamp file transfer earlier with perfect results.

We'll be doing more testing over the next few days.

Gary and all,

I was trying to copy, got the latest installed, and I received one where 8 or 9 blocks were missing , the same numbered blocks as someone else reported.

There were several times when , I think, Dave would tx and it would switch to mt63.

Just monitored the last 10 or minutes so take these comments as general comments.

One of these days I'll jump in and see what I can do but first I want to just monitor and figure out what is going on and let you all test.

Take care,

73 de rolan w3fdk

Dave, I was in monitor mode, got 3 blocks of 1 but and 2 blocks of the second. Flamp ver AJ copied that, AX copied nothing. Your sig was S9.

http://www.w1hkj.com/alpha/flamp/

fldigi - improved multi burst RsID detection. You will notice a longer blank period between the first and second bursts. This is needed to disallow trailing and leading tones from

being treated as being in a single tone sequence.

flamp - corrected problem with MS carriage return (0x0D) characters forcing base encoding of MS text files. Quick Start guide updated to AV/AX compatibility:

Were some of the errors attributable to rsid detection failure?

I've just posted version 59EXP03. I seem to take 2 steps forward and 3 back at times.
That might very well describe EXP02. I've been testing EXP03's rsid detector using the
noise test facility in fldigi. That is easier for Linux testers to use

$ ./fldigi --noise

But Windows users can also enable the wide band noise generator by adding the "--noise"
command line parameter to the desktop launch icon "target" control.

EXP03 is working the way that I thought EXP02 might ...

I really need feedback on rsid detection for on-air signals. I can only go so far with
bench tests.

Date: 2012-10-24 19:04:30 UTC
From: paNBEMS-owner@yahoogroups.com
Topic: 5141 Message: 5141

Hello all,

We are still having fun on the FLDIGI/FLAMP alpha testing and may have identified a new bug just earlier today on a failed FLAMP file transfer.

I would still like to encourage anyone interested in alpha testing to get the current versions of FLDIGI and FLAMP at the following links:

http://www.w1hkj.com/alpha/fldigi/v3.21/
http://www.w1hkj.com/alpha/flamp/

Here is a new FLAMP Quick Start guide:
http://www.w1hkj.com/alpha/flamp/FlampQuickStart.pdf

Please make sure you have read the quick start guide and always check the links to make sure you have the latest alpha versions. It's counter-productive to test with prior alpha versions.

Thanks for all the help with testing. w1hkj and the NBEMS Alpha Team has greatly appreciated our feedback and bug reports.

5142. PEMA/ACS exercise, 10/23/12 (yesterday)

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-24 19:16:47 UTC
From: David Kleber
Topic: 5142 Message: 5142

Hello all,

The Pennsylvania Emergency Management Agency (PEMA) held a nuclear plant exercise yesterday. I monitored from about 4pm to the close at around 9:30pm ET.

The primary operating frequency for ACS (Auxiliary Communications Service - formerly RACES) was 75m phone. They did voice traffic and occasionally announced the 3.583 spot for data transmission. Most of the data was situation reports transmitted with Olivia 8/500 but toward the end of the net they did an MT63 2k long transmission. NCS operations were excellent and I liked the way they switched to and from the voice net for periodic data transfers. It's pretty hard, if not impossible, for many of us to monitor 75m phone and 80m digital at the same time.

I'm sure to any of the ops involved in the exercise, the difference in the efficiency of the data modes as compared to trying to relay detailed voice messages, was striking.

To the best of my knowledge, this is the first time NBEMS was used in a PEMA/ACS/RACES exercise and I'm sure that they will report that they were pleased with the additional efficiency and effectiveness that NBEMS added to the drill.

If I get any hotwash reports or feedback from those involved, I'll be sure to post them here on the list.

If any of our members here were involved in the drill, please feel free to post your summaries here. I'm most interested to know about any of the VHF/UHF NBEMS activities that may have been conducted during the exercise.

From: Larry Keller
Topic: 5143 Message: 5143

RACES has NOT been replaced, that would require a change in Part 97 rules. ACS is a PEMA program that is intended to promote cooperation between the various radio groups, MARS ARESCAP CBetc. Operators participating in ACS events are required to be "registered" accoding to the PEMA ACS Strategic plan. This is just a brief note and the program is evolving. There will be a meeting this coming weekend. Hope this helps avoid confusion.

5144. Looks like Sandy will cause some trouble

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-25 14:53:28 UTC
From: Sander Pool
Topic: 5144 Message: 5144

Hi,

sorry I've been incommunicado for a while. Busy with other things. I trust you've all seen Sandy come this way. I'm firing up the generator this morning. A couple of days ago I changed my home internet to a load balancing/failover setup with both cable and U-verse. I would have preferred plain old DSL but ATT didn't offer that anymore. The wiring for both services goes in different directions so I hope I stand a better chance of having one of them 'up' when the trees start falling again.

I've been in touch with out emergency coordinator in town and they're aware of the situation. Not sure yet what preparations are being made but I've offered my assistance.

73,

Sander W1SOP

Well, I just had the opportunity to check my computer which I had left
unattended and running fldigi 3.22.0CB, flmsg 1.1.26AK and flamp 1.0.0AV.
Yesterday 10/24 I copied a flamp test message sent by W3FDK at 1438 with
100% accuracy. So I have it working now.

Topic: 5140 Message: 5146

Good deal, Mike. I'm glad it's working.

Current versions as of today, Oct 25, 2012 are:

FLDIGI 3.21.59EXP03
http://www.w1hkj.com/alpha/fldigi/v3.21/

FLAMP 1.0.0AX
http://www.w1hkj.com/alpha/flamp/

Before you do any testing, make sure you check the links so you're on the current versions.

Let me know if you'd like to schedule a test.

N3FLL and I had a great test of some large files with FLAMP on 5xPSK125R today. One file he sent me was a 22k text file that he sent in compressed mode on FLAMP.

I still monitor 146.580 with many of my radios having the frequency entered twice once with carrier squelch and the other with 100 hZ tone squelch. I have been hearing activity on the channel that sounds list it is not amateur radio operators. At this point I'm not quite sure if what I'm hearing is an image from another service or someone using ham rigs as though they were FRS radiios. Anyone else hearing this?

Ken,

It's been a while since I've been on 146.58, but I heard what sounding like some mixing on 145.53 a few weeks back. It sounded like public safety... maybe EMS.

5149. New TS-590S HOWTO: SSB Audio Setup

Yahoo group: paNBEMS (2012 — 2018)
Date: 2012-10-26 08:14:07 UTC
From: Ian Wade G3NRW
Topic: 5149 Message: 5149

I have just posted a new HOWTO document on the "TS-590S Resources Page":

http://homepage.ntlworld.com/wadei/ts-590s.htm

Click on the red "HOWTOs" button.

Then select HOWTO #20: "TS-590S HOWTO: SSB Audio Setup".

The HOWTO is a step-by-step guide to setting up really effective TX audio on the TS-590S. Includes background information on:

· Factors that affect the audio

· Menu A/ Menu B organization

· TX equalizers

· Low/High Cut filters

· ALC and speech processing.

Includes large diagrams showing in detail the permissible levels for ALC and compression.

Hardware requirements.

Detailed setup procedures for unprocessed and processed audio.

Appendix 1 describes the use of ARCP-590 for setting up User-defined TX equalizer profiles.

Appendix 2 describes how to record TX audio, using an undocumented TS-590S feature for feeding the monitored audio to a PC via the USB cable.

The HOWTO described above covers the practical steps in setting up the audio. To complement the HOWTO, the TechNote on SSB Audio Handling has a summary of the many features built into the Kenwood TS-590S.

To find the TechNote, go to the "TS-590S Resources Page":

http://homepage.ntlworld.com/wadei/ts-590s.htm

Click on the blue "TECHNOTES" button, then select TechNote #2: "TS-590S TechNote: SSB Audio Handling".

The TechNote includes full details for setting the audio equalizers and cut-off filters, together with configuring TX keying (by VOX, PTT and
